

MODUL- KATALOG

für das akademische Jahr 2026/2027
letzte Aktualisierung: Juli 2026

**„Mannheim Master in
Management“ (M.Sc.)**
Universität Mannheim

Vorwort

In Mannheim bilden wir seit über 100 Jahren die Führungskräfte der deutschen Wirtschaft aus. Mit Ihrer Entscheidung für den Mannheim Master in Management (MMM) werden Sie Teil eines besonderen Netzwerks ambitionierter, verantwortungsbewusster und leistungsstarker Persönlichkeiten, das Sie nicht nur im Studium sondern auch auf ihrem späteren Karriereweg eng begleiten wird. Als eine der führenden Business Schools in Europa bieten wir Ihnen ein auf Sie zugeschnittenes, praxisnahes und internationales Studium am Puls der Zeit, das Sie für anspruchsvolle Aufgaben in Top-Positionen exzellent vorbereitet. Egal, ob Sie eine Karriere in Consulting, Business Analytics, Digital Business, CSR Management, Marketing oder als Entrepreneur anstreben – der Mannheim Master in Management ist das Sprungbrett, um Ihr Ziel zu erreichen.

Profitieren Sie von unseren Kontakten zu erstklassigen Partnerunternehmen und renommierten internationalen Partneruniversitäten, lernen Sie von unseren forschungsstarken Professorinnen und Professorinnen, werden Sie Teil des MMM-Netzwerks und erleben Sie den Mannheim Spirit!

Ich freue mich auf Sie.

Ihr Prof. Dr. Bernd Helmig – Akademischer Direktor des MMM

6.6 Area Operations Management	336
6.7 Wahlfach	336

Aufbau und Konzept des Studiengangs

Der „Mannheim Master in Management“ (MMM) ist ein auf vier Semester ausgelegter Vollzeitstudiengang und bietet ein einzigartiges Lehrangebot, das eine individuelle und flexible Gestaltung des Studienplans ermöglicht. Die sechs Areas (Fachbereiche) der Fakultät für Betriebswirtschaftslehre

- Accounting and Taxation
- Finance, Banking and Insurance
- Information Systems
- Management
- Marketing & Sales
- Operations Management

bieten zusammen mehr als 120 Kurse in BWL an.

In drei Pflichtkursen im Bereich Methoden und Schlüsselqualifikationen sowie zwei Pflichtkursen in Business Economics aus dem Bereich der Volkswirtschaftslehre erwerben die Studierenden eine profunde wissenschaftliche Basis für das Masterstudium der Betriebswirtschaftslehre.

Im Wahlbereich Betriebswirtschaftslehre können die Studierenden selbst entscheiden, ob sie sich in einem bestimmten Forschungsfeld spezialisieren oder Kurse verschiedener Areas miteinander kombinieren möchten. Sie sind jedes Semester aufs Neue frei in der Wahl der Kurse und können so ihr ganz individuelles wissenschaftliches Profil kreieren.

Abgerundet wird das Studienkonzept durch die optionale Einbindung eines Wahlfachs (z.B. Psychologie, Geschichte, Wirtschaftsrecht oder Informatik). Dies ermöglicht den Studierenden eine noch individuellere Profilbildung über die Grenzen der eigenen Disziplin hinaus.

Der Studiengang MMM umfasst gemäß Prüfungsordnung somit die folgenden Bereiche:

- Methoden und Schlüsselqualifikationen (16 ECTS-Punkte, zwei Pflichtkurse (CC 501 und CC 504) sowie ein Wahlpflichtkurs (CC 502 oder CC 503))
- Business Economics (12 ECTS-Punkte, zwei Pflichtkurse (BE 510 und BE 511))
- Betriebswirtschaftslehre (44 – 68 ECTS-Punkte, frei wählbar aus über 120 Wahlkursen)
- Wahlfach (0 – 24 ECTS-Punkte, es darf eines von 13 Wahlfächern belegt werden)
- Master-Arbeit (24 ECTS-Punkte)

Charakteristisch für den „Mannheim Master in Management“ ist neben dem hohen Maß an Flexibilität bei der Kurswahl auch seine internationale Ausrichtung. Außer der Möglichkeit, sich für ein Doppel-Abschlussprogramm (Double Degree) zu bewerben, steht es den Studierenden des MMM offen, ein Auslandssemester in ihr Masterstudium zu integrieren.

Herausragende Studierende, die eine wissenschaftliche Karriere anstreben, belegen als Teilnehmende an der Studienoption Business Research Kurse aus den Promotionsstudiengängen des Center for Doctoral Studies in Business (CDSB) und verkürzen so die Zeit bis zur Promotion.

Im „Mannheim Master in Management“ werden folgende übergeordnete programmspezifische Kompetenzziele – „Competency Goals“ (CG) – vermittelt:

- Profundes fachspezifisches Wissen – Die Teilnehmenden können die theoretischen und konzeptionellen Grundlagen in zentralen Geschäftsbereichen unterscheiden und anwenden (CG 1).
- Professionelle Managementfähigkeiten – Die Teilnehmenden werden zu kompetenten Teamplayer:innen, analytischen Entscheidungsträger:innen und verantwortungsbewussten, selbständigen Fachleuten (CG 2).
- Soziale Verantwortung – Die Teilnehmenden werden zu kritischen, reflektierten und ethischen Entscheidungsträger:inn (CG 3).
- Erhöhte wissenschaftliche Forschungskapazitäten – Die Teilnehmenden werden hochqualifizierte Forscher:innen und Analyst:innen sein (CG 4).

Abkürzungsverzeichnis

DE: Der Kurs findet auf Deutsch statt.

EN: Der Kurs findet auf Englisch statt.

ECTS: ECTS-Punkte („European Credit Transfer and Accumulation System“) sind Leistungspunkte, die den Arbeitsaufwand für einen Kurs pro Semester beschreiben. 1 ECTS entspricht 30 Zeitstunden (1.800 Minuten) Arbeit.

Empfohlene Voraussetzungen: Voraussetzungen, die Sie für den erfolgreichen Besuch eines Kurses mitbringen sollten. Dabei handelt es sich lediglich um Empfehlungen, eine Überprüfung findet nicht statt.

FSS: Frühjahrs- / Sommersemester

HWS: Herbst- / Wintersemester

Notwendige Voraussetzungen: Voraussetzungen, die Sie für den erfolgreichen Besuch eines Kurses unbedingt mitbringen müssen. Wenn Sie diese nicht erfüllen, können Sie nicht zur Prüfung zugelassen werden (dies wird bei der Prüfungsanmeldung automatisiert überprüft!). Bitte beachten Sie, dass Kurse, die eine Voraussetzung für einen anderen Kurs darstellen, zum Zeitpunkt der Anmeldung erfolgreich abgeschlossen sein müssen, sofern nicht „parallele Belegung möglich“ angegeben wurde.

Programmspezifische Kompetenzziele (CG): Die Kompetenzziele geben an, welche Fähigkeiten Studierende eines Studiengangs mit ihrem Abschluss erworben haben werden. Die Kompetenzziele des MMM finden Sie am Anfang des Modulkatalogs. Die Kompetenzziele werden regelmäßig durch das Qualitätsmanagement („Assurance of Learning“) überprüft.

Prüfungsform und -umfang: Die Angaben gelten für den Ersttermin einer Prüfung.

Studiengänge, die MMM-Module importieren (Details finden Sie jeweils im Feld "Verwendbarkeit" der Modulbeschreibung):

- M.Sc. MMM: Master of Science: Mannheim Master in Management
- M.Sc. Wipäd.: Master of Science: Wirtschaftspädagogik
- M.Sc. VWL.: Master of Science: Volkswirtschaftslehre
- M.Sc. Wirt. Inf.: Master of Science: Wirtschaftsinformatik
- M.Sc. Wirt. Math.: Master of Science: Wirtschaftsmathematik
- MAKUWI: Master of Arts: Kultur und Wirtschaft

- MMDS: Master of Science: Mannheim Master in Data Science
- MMSDS: Master of Science: Mannheim Master in Social Data Science
- LL.M.: Master of Laws

SWS (Semesterwochenstunden): Anzahl der wöchentlichen Zeiteinheiten, die für einen Kurs aufgewendet werden. Diese unterteilen sich in „Lehre“, das heißt die Zeit, in der Sie an Lehrveranstaltungen teilnehmen und „Selbststudium“, also Zeit, in der Sie die Veranstaltungen selbstständig vor- und nachbereiten und sich auf die Prüfung vorbereiten. Eine SWS entspricht 45 Minuten.

Modulübersicht

Hinweis: Im Zuge der Umstellung des Modulsystems werden die bisherigen dreistelligen Modulnummern durch vierstellige Modulnummern ersetzt. Während der Übergangsphase sind im Modulkatalog daher sowohl die bisherigen als auch die neuen Modulnummern aufgeführt.

1 METHODEN- UND SCHLÜSSEL- QUALIFIKATION

Methoden- und Schlüsselqualifikation:

Bei den Modulen CC 501 und CC 504 handelt es sich um Pflichtveranstaltungen. Zusätzlich muss eines der beiden Module CC 502 und CC 503 belegt werden. Eine Belegung beider letztgenannten Module ist nicht möglich.

Module: CC 501 (CC 5010) Decision Analysis: Business Analytics II

EN

Contents

This course presents methods and concepts that support and improve rational decision making in various areas of application. The focus is on decision support and *prescriptive analytics* tools. Discussion of basic *descriptive* theories ensure a thorough decision-theoretical embedding.

Learning outcomes

This course aims to teach students how to use prescriptive models to make better decisions, in particular in a business context. Students will (i) develop a structural approach to *think about* decision problems; (ii) get equipped with a basic prescriptive analytics toolkit; and (iii) be able to confidently discuss with experts/consultants in the field.

Upon successful completion of the course, students will have a solid basic understanding of prescriptive analytics methods.

They will be able to abstract a given decision problem into a mathematical model (both in deterministic settings and under uncertainty) and compute a recommended course of action inferred from their model. Depending on the model, the last step may require the application of software/"solvers" (MS Excel). In the context of decision-making under uncertainty, students will learn how to deal with risk. Moreover, they will be aware of well-known behavioral findings that human intuition often conflicts with popular prescriptive models.

Prerequisites for participation

Necessary: –

Recommended: The lecture generally assumes basic knowledge of mathematics and statistics (high school graduation level).

Forms of teaching and learning	Contact hours	Independent study time
Lecture	2 SWS	6 SWS
Exercise class	2 SWS	7 SWS
ECTS credits	6	
Graded	yes	
Workload	180h	
Language	English	
Preliminary course work	–	
Form of assessment	Written exam (90 min)	
Restricted admission	no	
Further information	–

Prof. Dr. Martin Glanzer

Frequency of offering	Spring semester & fall semester
Duration of module	1 semester
Range of application	M.Sc. MMM, M.Sc. WiPäd, M.Sc. Wirt. Math., M.Sc. MMOSCM
Program-specific Competency Goals	CG 1

Contents

In this module we first briefly review most essential statistical concepts from descriptive and inferential statistics for univariate and bivariate data. Upon this, some concepts are extended or generalized to higher-dimensional data settings. The second part will mainly provide a treatment of the principles and uses of (linear) regression analysis for various purposes, such as causality analysis, prediction and forecasting. We will learn how the results from such analyses are appropriately interpreted and will discuss the limitations and potential pitfalls of all these techniques as well.

The Statistical Software R will intensively be used throughout the course and also in the final exam (laptop required).

Learning outcomes

By the end of the module students will have

- a sound understanding of key statistical concepts and techniques,
- familiarity with the principles and core techniques of econometric analysis and how regression results are used and interpreted,
- trained skills in the practical application of these techniques in a programming language

Prerequisites for participation

Necessary: not taken module CC 503

Recommended: Knowledge of basic statistics (elementary probability theory and inferential statistics included) at bachelor level required, knowledge of elementary linear algebra (vectors and matrices) helpful, should also know the concept of random variables and expected values

Preliminary course work	Successful participation in the exercise program is a mandatory requirement for admission to the final examination. Students must attend a minimum of 8 out of the 13 scheduled exercise sessions, in accordance with the established exercise format. This includes achieving satisfactory results in short assessments as well as demonstrating active engagement during the sessions, which are conducted in a structured group work environment. Comprehensive information regarding the organization and requirements of the exercise sessions will be provided in the course materials.

Module: CC 503 (CC 5030) Empirical Methods: Business Analytics I

EN

Contents

Theoretical foundations of empirical research. Statistical foundations of empirical research (key summary statistics, important theoretical probability distributions, hypothesis testing methodology, and key test statistics). Introduction to qualitative empirical research. Introduction to experimental empirical research. Introduction to survey-based empirical research. Introduction to empirical research based on secondary data.

Learning outcomes

Participants understand the epistemological possibilities and limitations of empirical research in the domain of business administration. Participants are capable of describing a dataset using appropriate summary statistics and test simple hypotheses about the structure of the data. Participants know the general approach to conducting qualitative studies, experimental studies, survey-based studies, and studies based on secondary data. Participants understand fundamental methods for analyzing causal relationships (particularly ANOVA and analysis of regression). They can correctly interpret results from these methods.

Prerequisites for participation

Necessary: Not taken CC 502

Contents

This lecture series deals with the topic of “Corporate Social Responsibility” (CSR) from a management perspective. The focus is on the conceptual background of CSR, its strategic implications for companies, and its implications for leaders and employees. One of the central questions is how CSR can be comprehensively integrated into organizations and how CSR-related practices and values are consistently enacted both inside firms and in firms’ external activities. A particular focus will be on the role of leaders. Managerial challenges in the field of CSR management are illustrated by real-life examples.

Learning outcomes

This course introduces students to the foundations and frontiers of Corporate Social Responsibility (CSR). By participating, students will develop an understanding of key CSR concepts and explore the challenges and approaches involved in implementing CSR at both the macro (firm) and micro (employee) levels. The course also provides insights into current trends and topics in applied CSR, along with an overview of methods used in contemporary CSR research.

2 BUSINESS ECONOMICS

Business Economics:

Die Module BE 510 und BE 511 sind Pflichtmodule.

Module: BE 510 (BE 5100) Business Economics I

EN

Contents

This module will provide an extended introduction to non-cooperative game theory at an intermediate level. Strategic decision making and relevant solution concepts for games of complete and incomplete information will be covered in detail. An important aim is to convey an understanding and a working analytical knowledge of how situations of a strategic nature can be modeled. The course will put particular emphasis on the ability to apply relevant game-theoretical concepts correctly.

Learning outcomes

On completion of the module, students will have acquired an advanced understanding of model-based analytical methods and arguments in microeconomics. They will have gained familiarity with relevant game-theoretical concepts under both full and incomplete information. They will be able to derive and interpret equilibria, reason about beliefs and sequential rationality, understand the role of refinements, and analyze static and dynamic games. They will also be able to communicate game-theoretic arguments clearly in both algebraic and verbal form.

Prerequisites for participation

Necessary: –

Recommended: Knowledge of introductory microeconomics at bachelor level; familiarity with calculus.

Contents

Building on BE 510 Business Economics I, this module will provide an introduction to economic models of strategic decision-making and behavior of firms in the context of oligopolistic competition. Topics will include output and pricing strategies, the economics of collusion, market structure, market entry decisions and product differentiation. Some of these topics require a degree of analytical rigor and we will make use of some game-theoretical and mathematical methods.

Learning outcomes

By the end of the module students will have

- the ability to apply economic reasoning in the context of oligopolistic competition,
- an understanding of model-based analytical methods and arguments,
- and familiarity with basic game-theoretic models of industrial organization.

Prerequisites for participation

Necessary: –

Recommended: Knowledge of introductory microeconomics at bachelor level, BE 510

3 BETRIEBS- WIRTSCHAFTS- LEHRE

Betriebswirtschaftslehre

Im Folgenden finden Sie das Modulangebot der betriebswirtschaftlichen Areas der Fakultät. Hier können Sie im Rahmen der Prüfungsordnung und unter Rücksicht auf die jeweiligen Modulvoraussetzungen frei wählen, welche Module Sie belegen. In der Regel werden in den 500er-Modulen eher grundlegendere Inhalte vermittelt, während 600er-Module häufig bereits auf einem gewissen Grundwissen aufbauen (Näheres entnehmen Sie bitte den Modulbeschreibungen). 700er-Module bezeichnen Seminare und stehen daher in direktem Bezug zur Master-Arbeit.

3.1 AREA ACCOUNTING AND TAXATION

Module: ACC/MAN 560 (ACC/MAN 5600) Managerial Accounting - Evaluating Financial and Non-Financial Performance

EN

Contents

An organization's long-term competitive success depends critically on the availability and efficient use of information about its products, services, processes, organizational units, suppliers, customers, and its social and environmental performance. Managerial accounting encompasses the concepts, models, and systems that provide managers with the information needed to achieve both financial and non-financial (ESG) goals. The course will familiarize participants with the terminology and basic concepts of managerial control systems. The topics range from forward-looking tools such as forecasting, planning, and budgeting to the analysis of cost information for decision-making and ex-post performance measurement. The design and use of those internal reporting systems varies substantially across different firms and industries and is closely interlinked with a firm's governance and control systems.

To shed light on these different governance practices, the course integrates a number of real-world cases. Applications cover the manufacturing, the services, and the financial industry.

Learning outcomes

Students will become familiar with advanced issues in managerial accounting and understand the use of financial and non-financial (ESG) information in managerial decision-making. Students will also develop a thorough understanding of management control systems and managerial incentives.

Prerequisites for participation

Necessary: –

Recommended: Bachelor-level knowledge of cost accounting

Module: ACC/MAN 561 (ACC/MAN 5610) Managerial Accounting – Case Studies

EN

Contents

An organization's long-term competitive success depends critically on the availability and efficient use of information about its products, services, processes, organizational units, suppliers, customers, and its social and environmental performance. Managerial accounting encompasses the concepts, models, and systems that provide managers with the information needed to achieve both financial and non-financial (ESG) goals.

This course is entirely case-based. You will work on real-world cases that require analysis, written submission, and presentation. The format emphasizes active application: using the tools from ACC/MAN560 to diagnose problems, support decisions, and communicate recommendations. The goal is to build your ability to apply managerial accounting in practice, not just understand it in theory.

Learning outcomes

This course adopts a fully case-based methodology, placing students in the role of decision-makers. Therefore, students will engage directly with realistic business scenarios that mirror the complexity of managerial practice. Each case will enable students to

- Diagnose problems using managerial accounting tools
- Develop evidence-based recommendations
- Communicate and defend the analysis in a structured format

Through case submissions and presentations, students will further build the ability to apply theory under uncertainty and thus acquire a core competency for any managerial role. The hands-on structure is deliberately designed to bridge the gap between the conceptual foundations from ACC/MAN560 and the more complex challenges encountered in real organizations.

Prerequisites for participation

Necessary: ACC 560 Managerial Accounting – Evaluating Financial and Non-Financial Performance (parallel attendance possible)

Module: ACC/MAN 660 (ACC/MAN 6600) Corporate Sustainability Strategies and Value Creation

EN

Contents

The sustainability of a company's business model is an increasingly important driver of firm value and, therefore, an essential input into the strategy process. This course will teach how sustainability goals can be integrated into strategy development and how this integration creates firm value. Topics include the role of regulation, materiality assessment, sustainability targets, the development of specific measures and flagship initiatives, and the interaction with corporate organization and governance. The course also offers an introduction to the link between sustainability strategies and sustainability reporting. Many business cases from different industries will illustrate the real-world impact of the lecture content.

Learning outcomes

Students gain a solid understanding of the relationship between corporate sustainability objectives, corporate strategy, and firm value. They develop an economic intuition for the real-world importance of such an integrated approach to corporate sustainability. They also understand how this relationship further interacts with factors such as a company's regulatory environment, internal target setting, corporate organization and governance. They can relate their knowledge to applied business cases.

Prerequisites for participation

Necessary: –

Recommended: Bachelor-level knowledge of value-based management

Module: ACC/MAN 661 (ACC/MAN 6610) Corporate Sustainability Performance: Measurement, Assessment and Improvement

EN

Contents

The success of a company's sustainability strategy critically depends on its ability to monitor and evaluate sustainability performance. This course introduces the most important management tools to measure and assess sustainability performance, with a particular focus on decarbonization, waste and circular economy management, and life cycle assessment. Building on these sustainability performance metrics, the course will also focus on how to turn the insights from performance measurement into specific actions, for example, by discussing approaches to reduce carbon emissions and increase the circularity of the business model. Many business cases from different industries will illustrate the real-world impact of the lecture content, including cases study exercises and hands-on usage of leading management tools.

Learning outcomes

Students gain a comprehensive overview over the measurement of corporate sustainability performance and understand how to measure key metrics, especially in the fields of decarbonization, circularity, and life cycle assessment in general, but also specifically for a variety of industrial businesses. They develop an economic intuition for the real-world application of the metrics and become familiar with typical challenges in their implementation. They also understand how to interpret the indicators and are able to link their interpretation to suitable actions that lead to performance improvement.

Prerequisites for participation

Necessary: - (from spring **2027**: ACC 510 or ACC 520 or ACC 530 or ACC 540 or ACC 560 or ACC/MAN 560 or ACC/TAX 570)

Module: ACC/MAN 662 (ACC/MAN 6620) Private Equity: Due Diligence and Value Creation

EN

Contents

The course aims at exploring Private Equity (PE) as an alternative asset class on the rise and will equip the participants with a sound understanding of its characteristics and mechanics.

After outlining Private Equity's role from an asset management perspective, the course will focus on PE fundamentals (strategy, economics, stakeholders) as well as on detailing the Leverage Buy-out value chain including the sourcing strategy, due diligence, portfolio value creation and exit. There will be a specific emphasis on teaching the LBO mechanics, core due diligence techniques and value creation strategies.

The course will be complemented by several practical exercises, in class discussions, as well as guest lectures from professionals in the Private Equity Industry.

Learning outcomes

Participants will be able to distinguish Private Equity from other asset classes. In particular, participants understand how to assess and create value from potential investments. Overall, this course will provide participants with practical insights into Private Equity and will equip them with advanced knowledge for a potential career in the industry.

Prerequisites for participation

Necessary: ACC 510 or ACC 520 or ACC 530 or ACC 540 or ACC 560 or ACC/MAN 560 or ACC/TAX 570

Module: ACC/MAN 663 (ACC/MAN 6630) Carbon Removal: Technologies, Markets & Business Impact

EN

Contents

As the world transitions toward net-zero emissions, carbon removal has become a central element of climate strategy and business transformation. This course introduces the technological foundations, market mechanisms, and strategic implications of carbon dioxide removal (CDR) for firms and investors. Students will learn how different removal approaches—from nature-based to engineered solutions—operate, how emerging markets for carbon credits and removals function, and how companies can integrate CDR into their sustainability and investment strategies. Topics include the role of regulation and policy, certification and accounting standards, business model innovation, and financing mechanisms for scaling removal technologies. Real-world cases and guest lectures from industry experts will illustrate how CDR is reshaping value chains, influencing corporate climate commitments, and creating new opportunities and risks for business leaders.

Learning outcomes

Students gain a solid understanding of the technological, economic, and strategic foundations of carbon dioxide removal (CDR) and its role in achieving global net-zero goals. They develop an intuition for how CDR solutions interact with corporate climate strategies, regulatory frameworks, and emerging carbon markets. They also understand how different business models, financing mechanisms, and policy incentives shape the development and scaling of carbon removal technologies. Students are able to critically evaluate CDR initiatives from both a business and sustainability perspective and apply their knowledge to real-world cases involving companies, investors, and policymakers.

Module: ACC/MAN 664 (6640) Value-Based Management and Controlling in Practice: From Strategy to the P&L

EN

Contents

This course examines how companies create and measure value, and how controlling supports management in doing so. Starting from value-based management, growth strategies, and investment decisions, it moves to the operational levers that shape margins: commercial activities, supply chain choices, mix effects, R&D investment under uncertainty, and overhead cost allocation. The final part addresses how controllers plan, forecast, and set targets, and what it means to act as a finance business partner rather than a data provider. Throughout, the course draws on real business situations and decision problems rather than abstract theory. A case study assignment lets students apply these concepts to a specific business decision. Students will present the case study solution in a real-world management setting on the Merck Campus in Darmstadt.

Learning outcomes

Upon successful completion of this course, students

- are able to apply value-based management concepts (e.g., growth and M&A logic, relevant KPIs) to assess whether a strategic or investment decision creates value.

- understand how commercial, supply chain, and product/customer mix decisions drive P&L margins, and can identify and quantify the underlying effects.
- are able to evaluate the impact of R&D investment decisions under outcome uncertainty and of overhead cost allocation methods on reported product or business unit profitability.
- are able to compare different forecasting and target-setting approaches used in financial planning & analysis and judge their suitability for a given situation.
- understand the role of the controller as a finance business partner and can distinguish between presenting data and facilitating decisions.
- are able to structure and analyze a real business case, deriving and justifying a value-based recommendation.

Prerequisites for participation

Necessary: none (from Fall Semester 2027: successful completion of ACC/MAN 560)

Recommended: Bachelor-level knowledge of cost accounting, basic familiarity with controlling concepts

Module: ACC/MAN 665 (6650) Controlling and Finance in Practice: Steering a Global Technology Group

EN

Contents

This course examines how a leading international technology group manages finance and controlling at scale. It starts with the concepts, KPIs, and processes used to steer a diversified international group (i.e., integrated planning, forecasting, performance management, and incentive systems), then turns to how strategy is developed and translated into financial plans and capital allocation. From there, the focus shifts to growth and resilience: investment and R&D controlling, M&A valuation and post-merger integration, and steering under volatile, uncertain conditions. The lecture closes with how digitalization, including predictive forecasting and generative AI, and systematic skill development are reshaping the finance and controlling function. Throughout, concepts are grounded in ZEISS Group's actual processes, tools, and lessons learned.

Learning outcomes

Upon successful completion of this course, students

- are able to describe the key processes and KPIs used to steer a diversified international group (e.g., integrated planning, business performance management, balanced scorecard) and explain how they fit together.

- understand how corporate strategy is developed and translated into financial plans and capital allocation and portfolio decisions.
- are able to apply core valuation methods to assess an M&A transaction and can identify the main challenges of post-merger integration and its controlling.
- understand how companies steer investment, working capital, and R&D efficiency to support growth, and are able to assess a firm's approach to resilience in a volatile and uncertain (VUCA) environment.
- understand how digitalization, especially predictive forecasting and generative AI-based reporting, is changing the finance and controlling function, and can identify the organizational and change-management factors that determine whether analytics implementations succeed.

Module: ACC/TAX 570 (ACC/TAX 5700) ESG Regulation and Sustainability Reporting

EN

Contents

Environmental, social, and governance (ESG) factors are increasingly important for the long-run performance of companies and their sustainability management. Therefore, the reporting on these factors has gained attention from many private and public initiatives worldwide and recent regulations (such as the CSRD in the European Union) require disclosures of companies' ESG performance. Managers respond to the pressure by regulators and stakeholders by increasingly incorporating the measurement and monitoring of ESG targets in their internal performance evaluation. This course is introducing the theoretical foundations, the regulatory framework as well as trends in current management practice of ESG reporting. Particular emphasis is laid on carbon disclosures and tax transparency.

Learning outcomes

Students have developed an economic intuition for the theoretical foundations of targeted disclosure regulation. Specifically, they understand how public reporting requirements can support regulatory objectives with regard to ESG factors and they know institutional details of how ESG regulation in the corporate sector contributes to these objectives. They can relate their knowledge to applied cases on topics such as decarbonization and fair taxation.

Prerequisites for participation

Studieninhalte

Die Vorlesung vermittelt ein normatives Verständnis der Grundsätze ordnungsmäßiger Buchführung (GoB) als Ausgangspunkt der Bilanzierung von Unternehmen – vom Mittelstand bis zu börsennotierten Aktiengesellschaften – in Deutschland. Nach einem Überblick über Begriff und System der GoB werden zunächst die Aktivierungsnormen für den Jahresabschluss systematisch und beispielhaft erarbeitet. Dazu zählen insbesondere die Definition von (immateriellen) Vermögensgegenständen und deren Zuordnung, die Gewinnrealisierung sowie aktive Rechnungsabgrenzungsposten. Anschließend werden Passivierungsgrundsätze zum Verbindlichkeitsbegriff, Passivierungszeitpunkt und zu Drohverlustrückstellungen sowie passiven Rechnungsabgrenzungsposten diskutiert. Zuletzt werden die Bewertungsnormen mit einem Fokus auf die Anschaffungs- und Herstellungskosten, die Bewertung von Schulden, die Absetzung für Abnutzung und den Teilwert thematisiert.

Angestrebte Lernergebnisse

Die Studierenden erlangen detailliertes Wissen bezüglich der Aktivierungs-, Passivierungs- und Bewertungsnormen nach handelsrechtlichen GoB. Die Studierenden sind in der Lage, die Bilanzierungsvorschriften darzustellen, aus bilanztheoretischer Sicht einzuordnen und kritisch zu würdigen. Außerdem können die Kursteilnehmer auch komplexere Bilanzierungssachverhalte durch Bezug zur Rechtsprechung des Bundesfinanzhofs und einem breiten Literaturspektrum subsumieren und einer Lösung zuführen. Die interdisziplinäre Ausrichtung des Kurses bietet den Studierenden tiefere Einblicke in die Verknüpfung von Betriebswirtschaftslehre und Rechtswissenschaften. Durch die gemeinsame Erarbeitung und Präsentation praxisnaher Fallstudien in Kleingruppen (in Zusammenarbeit mit FALK) wird die Fähigkeit der Studierenden gefördert, Probleme zu erkennen, zu analysieren und strukturiert sowie verständlich darzustellen. Im Rahmen der Fallstudienpräsentationen werden zudem zentrale Kompetenzen wie Präsentationsfähigkeit, Teamarbeit und Leadership gestärkt.

Voraussetzungen für die Teilnahme

Notwendige: Keine Belegung von ACC 512

Module: ACC 520 (ACC 5200) IFRS Reporting and Capital Markets

EN

Contents

The lecture introduces the most relevant IFRS standards and their informational impact on capital markets. After an analysis of the institutional background of the international harmonization process in financial reporting, we will focus on key accounting issues such as revenue recognition and financial instruments. We will illustrate the effects using current accounting practices of multinational entities, complemented by major research findings. We will conclude the lecture by an assessment of the importance of accounting for corporate governance and controlling (inside perspective) and for capital-market-oriented financial statement analysis (outside perspective).

Learning outcomes

Students will know about economic consequences of financial reporting and about the role accounting information plays on capital markets, understand the special role of IFRS on international capital markets, be familiar with the main IFRS accounting rules and their impact on financial statements, and demonstrate orally and in writing their comprehension during the exercise classes.

Prerequisites for participation

Module: ACC 521 (ACC 5210) IFRS Reporting and Capital Markets Case Study

EN

Contents

In the case study class, in collaboration with PwC, students work in groups on a topic-specific case study related to the course. Each group is assigned one case study covering a selected area of financial reporting and is asked to analyze the case in light of the relevant IFRS requirements, underlying economic issues, and possible reporting incentives. The case studies are designed to complement the lecture material by transferring the conceptual and technical content of the course to realistic applications.

Learning outcomes

Students will become familiar with the main IFRS accounting rules and their impact on financial statements, and demonstrate orally and in writing their comprehension in the solution of case studies.

Prerequisites for participation

Necessary: –

Recommended: Advanced knowledge of IFRS reporting. The course is designed as a complementary course to ACC 520 – IFRS Reporting and Capital Markets.

Program-specific Competency Goals	CG 1, CG 2	

Contents

The lecture covers the preparation and interpretation of consolidated financial statements based on IFRS. All consolidation and elimination entries are introduced that are necessary for combining the separate statements of financial position and for eliminating the intercompany transactions. In addition, theoretical models explaining the fundamental approaches to group accounting are presented and discussed. The case study, in collaboration with Deloitte, provides students with a great opportunity to learn how legal and regulatory requirements can be met in the context of group accounting in order to strategically steer a group. The case studies are thus complementing the lecture with first-hand evidence of how specific, practice-relevant issues of group accounting manifest.

Learning outcomes

Students know the regulations for group accounting. Based on this knowledge, students are able to prepare consolidated financial statements. They learn how consolidation methods impact the consolidated financial statements and are able to interpret group reports. Furthermore, students learn how the regulatory framework of group accounting can be applied to successfully steer international groups based on case studies.

Prerequisites for participation

Necessary: Not taken ACC 511

Recommended: Bachelor-level knowledge of financial accounting

Module: ACC 540 (ACC 5400) Financial Statement Analysis & Equity Valuation

EN

Contents

This course teaches financial statement analysis in the context of equity valuation. The first part covers sources of information and common tools of financial statements analyses (accounting analysis, ratio analysis, cash flow analysis, analysis of narratives). In the second part, methods for equity and asset valuation, the cashflow based DCF-models and the earnings-based abnormal earnings (AE) and earnings growth (AEG) models, are covered. The coverage includes the derivation and numerical calculation of the required rate of returns and structured forecasts necessary to reach a valuation. Finally, the course covers how ESG information is incorporated in firm analysis and valuation.

Learning outcomes

The students should get an in-depth understanding of the approaches and methods available for analyzing financial statements, preparing pro-forma financial statements in financial modelling and their application for valuing equity, firms and assets. They should on the one hand understand both the theoretical constructs, assumptions, and limitations behind those concepts, but should, on the other hand, also be capable to implement them (computer-based) in practice.

Module: ACC 541 (ACC 5410) Financial Statement Analysis & Equity Valuation - Case Study

EN

Contents

This course supplements lecture ACC 540 "Financial Statement Analysis & Equity Valuation" by assigning and discussing selected case studies in collaboration with KPMG (Service-lines: Accounting Advisory; Valuation; M&A; Strategy). These real-world case studies will help students to become familiar with the practical aspects of financial statement analysis and equity valuation in multiple business fields of application.

Learning outcomes

The students will be capable of implementing methods and tools of financial statement analysis, applying them in practical contexts, and presenting and critically discussing these solutions with professionals.

Module: ACC 610 (ACC 6100) IFRS Reporting and Capital Markets II

EN

Contents

The lecture provides an advanced examination of selected topics under IFRS and their role in complex reporting environments. After introducing the relationship between accounting and political processes, we discuss the theoretical foundations of group accounting and extend this perspective to reporting challenges arising in M&A transactions. Further topics include leases, hedge accounting, provisions for employee benefits, and income taxes. The lecture emphasizes areas in which management judgment significantly affects financial reporting outcomes and performance metrics. Insights from practice support the assessment of the implications of accounting choices for corporate governance and capital-market-oriented financial analysis.

Learning outcomes

Students will understand the regulatory context of advanced IFRS requirements and their relevance for financial reporting. They will be familiar with the conceptual foundations of group accounting as well as the specific reporting challenges associated with M&A transactions. In addition, students will become familiar with selected advanced IFRS topics that pose significant challenges in practice. Students will develop the ability to evaluate how accounting choices and areas of management judgment influence financial statements, reporting quality, and the assessment of firms by capital-market participants.

Prerequisites for participation

Necessary: At least one of the following courses ACC 510, ACC 520, ACC 530, ACC 540, ACC 560, ACC/MAN 560, ACC/TAX 570. In exceptional cases, course ACC 303 may also suffice as a prerequisite.

Module: ACC 620 (ACC 6200) Advanced IFRS: Accounting for Financial Instruments and Financial Institutions

EN

Contents

The course addresses in-depth the accounting for financial instruments and by financial institutions under IFRS as well as related conceptual issues currently discussed by standard setters and bank regulators. It covers the definition of financial instruments, their classification, initial and subsequent measurement, impairment, derecognition, as well as their accounting in the context of hedging transactions. We also discuss relevant notes disclosures in example banks' financial statements and links to capital regulation.

Learning outcomes

The course aims at developing the skills to understand, apply, analyze and critically evaluate accounting standards in the complex field of accounting for financial instruments and financial institutions. Students will get an in-depth understanding of the current IFRS accounting rules, in particular the comprehensive IFRS 9, and understand the underlying conceptual discussions surrounding their development. Overall, students will gain a deep and profound understanding of these advanced topics of financial accounting.

no offering in fall 2026/2027

Contents

Why is there a need for auditing? How are audits priced? How do (different) auditor liability rules affect audit quality? These questions are raised frequently in light of the Wirecard scandal and the regulatory actions that just recently followed. This course addresses these (and other) questions by analyzing the auditor-client relationship as well as the market structure of the auditing profession. The analysis is based on theoretical models that use game theory. For that purpose, auditors are perceived as strategic players that rationally interact with their various stakeholders.

Learning outcomes

Students are familiar with the purpose and the scope of an independent audit. They realize that auditing does not only mitigate agency conflicts, but is also a potential source for such frictions. Furthermore, students know how the auditor strategically interacts in game theoretic settings. They are aware of the influence of regulatory changes on the auditing profession and the responses of audit firms to these changes.

Prerequisites for participation

Module: ACC 676 (ACC 6760) Case Studies on Consulting in Financial Services Firms

EN

Contents

In this course, offered jointly with KPMG, current topics from the frontier between financial accounting, consulting, risk management, regulatory law and capital markets with a focus on the financial services sector will be covered. The participants will form groups of three to four students and discuss problem areas of high practical relevance using both practice-oriented and academic approaches. Results will be summarized in a consulting report and presented in a final results presentation.

Learning outcomes

Participants are able to discuss and solve complex problems of high practical relevance at the interface of capital markets, financial accounting and auditing. Students know the area of tension between academic case solutions and those related to practice and are able to develop solutions according to both aspects. The consulting report corresponds to standards required by the business practice and is academically founded.

Prerequisites for participation

Contents

The aim of this seminar-style course is to provide students with insights into analytical disclosure theory, one important stream of literature in accounting research. The course provides an overview into the various determinants that shape firms' reporting decisions. The structure of the course follows along the evolution of research in disclosure theory: In his famous paper about the "Market for Lemons", Akerlof (1970) predicts a collapse of markets as the result of information asymmetries between sellers and buyers. Building on that, Grossman and Hart (1980) set out the *unraveling principle*, describing that sellers (or firms) have a vested interest in establishing information symmetry to distinguish themselves from the anonymous, silent mass. These papers provide a basis for a comprehensive literature stream that analyzes the emergence of disclosure equilibria in various settings.

Learning outcomes

Students know the fundamental literature of disclosure theory. They understand the unraveling principle, its assumptions, and consequences for the disclosure behavior of firms. Furthermore, students are able to assess and discuss the setting, basic assumptions, and mechanisms of analytical disclosure models. Participants are able to formulate constructive criticism of disclosure models and to defend them.

Prerequisites for participation

Necessary: Not taken ACC 675

Recommended: Basic knowledge in game theory, preparation of provided literature

Contents

The seminar offers an introduction to research in accounting. The research questions that we will address come from all fields of accounting research and we will rely on different research methods (both theoretical and empirical methods) in examining these questions. The analysis also involves a comprehensive review of scientific accounting literature. In preparing the seminar, participants write a seminar thesis. Participants will present and discuss the key results of their thesis during the seminar.

Learning outcomes

Participants get acquainted with scientific research in accounting. They develop basic research skills that are necessary to address typical research questions in financial accounting, managerial accounting, or related fields. They will also be able to structure a research paper and become experienced in academic writing. In addition, participants will learn how to present scientific work to other researchers and how to discuss scientific research.

Prerequisites for participation

Necessary: ACC 510 or ACC 520 or ACC 530 or ACC 540 or ACC 560 or ACC/MAN 560 or ACC/TAX 570

Modul: TAX 520 (TAX 5200) Besteuerung der Unternehmen

DE

Studieninhalte

- Grundlagen der laufenden und aperiodischen Besteuerung deutscher Unternehmen in Abhängigkeit von der Rechtsform.
- Berechnung der Steuerbelastung verschiedener Rechtsformen einschließlich Kombinationen klassischer Rechtsformen (z.B. GmbH & Co. KG, Betriebsaufspaltung).
- Herausarbeitung der Determinanten der Steuerbelastung von Unternehmen.

Angestrebte Lernergebnisse

Die Teilnehmenden lernen die Besteuerung deutscher Unternehmen unterschiedlicher Rechtsformen kennen. Die Teilnehmenden sollen die Steuerbelastung der Gewinne und Leistungsvergütungen in Abhängigkeit von der Rechtsform ermitteln können. Darüber hinaus sollen die Teilnehmenden in der Lage sein, Aussagen zur steueroptimalen Rechtsformwahl zu treffen.

Module: TAX 530 (TAX 5300) Taxation of Businesses and Individuals

EN

Contents

- Basic principles of taxation, personal income tax, corporate income tax, local profit taxes and non-profit taxes (e.g., net wealth tax, real estate tax)
- Comparative taxation of transparent entities (sole proprietors and partnerships) and separate entities (corporations and their shareholders)
- Determination of taxable profits and relation between tax accounting and financial accounting
- Gift and inheritance taxes, value added tax

Learning outcomes

- Students will know the basic principles of different types of taxes and understand the structure of these taxes (the lecture focuses on the tax systems in the EU member states and the US).
- Students will understand the relevance and consequences of the transparency principle and the corporation principle and assess the tax burden on profits as well as on shareholder compensations dependent on the legal form of the business.
- Most notably, students will understand how taxes influence business decisions and evaluate tax planning opportunities created by business tax law.

Module: TAX 560 (TAX 5600) Taxes and Business Decisions

EN

Contents

Most finance and strategy courses do not consider the role of taxes in making business decisions. The goal of the course is to understand how taxes affect business decisions. In particular, the course teaches the tools for identifying, understanding, and evaluating tax planning opportunities. It is designed to be valuable even as (tax) laws and governments change, and the taught framework is portable in that it can be applied to the set of tax laws in any country.

Taxes are everywhere and have a direct impact on cash-flow. Having a basic understanding of how taxation affects business decisions is therefore very important and contributes to a solid financial literacy.

The role of taxes is applied to different decision contexts, such as investments and organizational form. In addition, the class covers concepts such as implicit taxes and tax arbitrage, and it discusses how the marginal tax rate should be calculated for loss-making firms.

The impact of taxes on business decisions will always be considered in the context of the following themes: 'All Parties' (the tax implications for all of the involved parties have to be considered), 'All Taxes' (explicit and implicit taxes have to be considered), and 'All Costs' (all costs, tax and non-tax costs, have to be considered).

All aspects of the course will discuss empirical applications.

The class features a guest lecture by a partner of a big-4 accounting firm. Knowledge from other Master-level tax classes is not necessary to take this class. Large parts of the course will be based on the following textbook that is used in the leading business schools around the world: Scholes, Wolfson, Erickson, Hanlon, Maydew and Shevlin: Taxes and Business Strategy: A Planning Approach.

Learning outcomes

Understand how taxes affect business decisions.

Prerequisites for participation

Necessary: –

Recommended: Introductory courses in business taxation are advantageous.

Module: TAX 630 (TAX 6300) International Business Taxation

EN

Contents

- Basics of international business taxation
- Taxation of inbound investments
- Taxation of outbound investments
- Transfer pricing
- Cross-border reorganisations

Learning outcomes

Students know the basics of international taxation (national tax law, double taxation conventions, primary and secondary EU law) and the causes of double taxation. Students understand the tax consequences of establishing domestic and foreign permanent establishments as well as domestic and foreign corporations. Students understand the impact of transfer pricing on the companies' tax burden. Most notably, students are able to evaluate how multinational companies make use of internationally diverging tax burdens.

Prerequisites for participation

Modul: TAX 631 (TAX 6310) Internationale Konzernbesteuerung

DE

Studieninhalte

- Besteuerung von international tätigen, integrierten Konzernen, insb. Ertragsbesteuerung, Verrechnungspreise, Betriebsstättenbesteuerung, Quellensteuern, Hinzurechnungsbesteuerung sowie Verfahren zur Beilegung von Steuerstreitigkeiten.
- Implikationen von aktuellen Trends international tätiger Konzerne auf deren Besteuerung.

Angestrebte Lernergebnisse

Die Teilnehmenden erlernen bedeutende Grundlagen der Besteuerung von international tätigen Konzernen. Dabei wird theoretisches Steuerwissen angewendet und anhand von authentischen Problemen in praktisches Steuerwissen überführt. Die Teilnehmenden können die Wirkung von relevanten Steuerregelungen auf Entscheidungen internationaler Konzerne und deren Wechselwirkungen beurteilen. Die Lerninhalte werden den Teilnehmenden problemorientiert und über das Auflösen von authentisch konstruierten Problemen in Kleingruppen vermittelt.

Voraussetzungen für die Teilnahme

Notwendige: –

Empfohlen: Kenntnisse aus dem Modul TAX 520, TAX 530 oder TAX 630

Module: TAX 661 (TAX 6610) Case Studies in International Tax Planning

EN

Contents

The course provides an in-depth overview of international tax planning and structuring, including the use of financing companies in both outbound and inbound investment scenarios. It introduces common tax planning strategies using intellectual property, such as the "Double Irish with a Dutch Sandwich," the design of cross-border financing structures, and the strategic use of double taxation treaties. In addition, the course examines the implications of the German interest limitation rule ("Zinsschranke") and comparable foreign anti-tax avoidance provisions. The tax planning structures taught in this course build on the foundations established in other courses and extend them by addressing more advanced, complex cross-border scenarios.

Learning outcomes

The students learn how to apply their skills in basic taxation on practical cases. The students get a deeper insight into the basics of the most important areas in international tax planning and tax structuring. The students learn how to implement their theoretical knowledge into practical scenarios. Thereby special attention is paid to the application of the wording of law – especially using inaccuracies in law. The students learn to develop international tax planning and tax structuring ideas across different types of taxes.

3.2 AREA FINANCE

Module: FIN/MAN 510 (FIN/MAN 5100) Women in Leadership

EN

Contents

This course takes an interdisciplinary approach to examine the gender gap in leadership positions. We will analyze the psychological and economic reasons for the low fraction of women in leadership. While leadership positions are defined broadly and range from politics to public and private institutions, a special emphasis will be on the academic environment. The course will highlight women's educational and labor market choices, their fertility decisions, and their preferences. We will also examine structural hurdles for women to reach the top, for example stereotypes, discrimination, and social norms. Finally, the effectiveness of gender equality measures – such as quota systems – will be discussed. In addition to the theoretical and empirical fundamentals, the course also comprises two hands-on practical sessions taught by experienced instructors in which students' rhetoric and negotiation skills are trained. The course consists of four core building blocks:

1. Women in Leadership: The Economic Perspective.
2. Women in Leadership: The Psychological Perspective.
3. "Raise Your Voice" – Rhetoric Training
4. "Raise Your Pay" – Negotiation Training

Learning outcomes

Upon successful completion of this course, students will

- know the size, reasons, and time trends of gender gaps in leadership positions with a focus on an academic context
- understand the psychological foundations of these gender gaps
- understand the impact of these gender gaps on economic outcome variables such as women's labor market decisions and the gender pay gap
- have improved their rhetorical skills and be prepared to give professional academic research presentations
- have improved their negotiation skills and be better prepared to take on a leadership position in the future

have practiced presenting their work to a critical, interdisciplinary audience and to discuss other students' presentations in a format closely resembling that of most academic conferences.

Contents

This course introduces into the theoretical foundations of modern portfolio management and their applications. It covers expected utility theory, measures of risk and return, the theory of portfolio selection, asset pricing models and their empirical test, the efficient markets hypothesis, and issues in stock portfolio management including active management and ESG investments.

Learning outcomes

The course provides students with an understanding of the theoretical and conceptual foundations of modern quantitative portfolio management. Students learn to understand investment strategies, and to interpret and evaluate them against the background of capital market theory and the efficient markets paradigm.

Prerequisites for participation

Necessary: –

Recommended: The course requires basic knowledge in mathematics (optimization, elementary matrix algebra) and statistics (expected value, variances, covariances, correlation, t-tests). Students should have successfully attended the courses Finanzwirtschaft I and II in the Mannheim Bachelor program (or similar courses elsewhere).

Module: FIN 540 (FIN 5400) Corporate Finance I - Lecture (Capital Structure, Cost of Capital and Valuation)

EN

Contents

Corporate Finance studies how corporations finance their operations. The emphasis of this part of the curriculum is on shareholder value and company valuation. We will also study the cost of capital, introduce theories of capital structure, and initial public offerings. The objective of this course is to introduce the fundamental theoretical concepts of company valuation.

Learning outcomes

After completing this course, students will know and understand state-of-the-art tools such as DCF, Residual Income, EVA, and Multiples. In particular, participants will know how to determine the cost of capital for corporations and projects using real world data. Further, participants will learn how to identify value drivers by applying financial ratio analysis. Students will also be familiar with event studies in order to analyse how capital markets react to important corporate events like merger announcements or earnings announcements.

Prerequisites for participation

Necessary: –

Recommended: Every student participating in this course should have completed the equivalent of the 2-semester finance module, which is part of the Mannheim Bachelor program. The lectures generally assume basic knowledge in accounting (balance sheets, income statements, financial ratios), finance (present value methods, portfolio theory, CAPM), mathematics (calculus, optimization) and statistics (mean, variance, standard deviation, univariate and multivariate regressions). The course assumes that students already manage the material in Brealey, Myers, Allen, *Corporate Finance*, (McGraw-Hill, 10th edition, 2010), chapters 1-19.

Module: FIN 541 (FIN 5410) Corporate Finance I - Case Study (Capital Structure, Cost of Capital and Valuation)

EN

Contents

Corporate Finance studies how corporations finance their operations. The emphasis of this part of the curriculum is on shareholder value and company valuation. The focus of the course will be on solving several case studies in groups of up to three students. Each of these cases has to be handed in and will contribute to the final grade. The hands-on format of this course ensures that students are able to transfer the theoretical concepts encountered in the lecture (FIN 540) to real world problems.

Learning outcomes

After completing this course, students will be able to value companies using state-of-the-art tools such as DCF, Residual Income, EVA, and Multiples. In particular, participants will be able to determine the cost of capital for corporations and projects using real world data. Participants will be able to identify value drivers by applying financial ratio analysis and analyse the impact of those value drivers on the firm value. Students will also be able to perform event studies in order to analyse how capital markets react to important corporate events like merger announcements or earnings announcements.

Students will be able to implement the theoretical concepts discussed in the lecture (FIN 540) using Microsoft Excel.

Prerequisites for participation

Necessary: FIN 540 Corporate Finance I (Parallel attendance possible)

Recommended: Every student participating in this course should have completed the equivalent of the 2-semester finance module, which is part of the Mannheim Bachelor program. The lectures generally assume basic knowledge in accounting (balance sheets, income statements, financial ratios), finance (present value methods, portfolio theory, CAPM), mathematics (calculus, optimization) and statistics (mean, variance, standard deviation, univariate and multivariate regressions). The course assumes that students already manage the material in Brealey, Myers, Allen, *Corporate Finance*, (McGraw-Hill, 10th edition, 2010), chapters 1-19.

Module: FIN 555 (FIN 5550) Financial Markets and Employees

EN

Contents

The organization of markets has changed significantly in recent decades. Transaction costs in capital markets have declined, and now provide firms with much better access to private equity, venture capital, and tailored financial products. Product markets have internationalized and resulted in more complex and widely distributed supply chains. And labor markets have been affected by the trend toward the gig economy and firms' increased reliance on innovation and intangible assets. The last aspect is key because we need to ask how firms can develop a sustainable competitive advantage in a setting in which their key assets are employees. All these developments significantly influence the management, ownership, financing, and organization of firms, while also bearing crucial implications for stakeholder interests and economic inequality.

This course surveys and discusses recent findings on the interface between financial markets and employees. Much of the textbook discussions in various subfields of business and economics are still based on traditional paradigms, which view firms as collections of physical assets that generate cash flows, and which see financial markets as mainly occupied with valuing and distributing these cash flows. Yet, recent research has moved on from this paradigm and acknowledges the secular shift of market economies toward intangible capital. The new paradigm recognizes that this traditional conception is in serious need of overhaul, and needs to incorporate the increased role of human capital in corporations and the shift in the balance of power between investors and employees that this development entails. Still, much of this change in thinking and many new findings have not found their way into business education. This course is intended to fill this gap.

Learning outcomes

After successfully completing this course, students should be able to do the following:

- Assess business situations that affect the labor force and understand what is special about human capital.
- Analyze the relationship between firms' labor force (e.g., commitment to employment insurance, difficulties in attracting and retaining employees, job satisfaction) and how financial markets relate to these decisions (valuation, choice of ownership, capital structure).
- Understand how the markets for key employees (top and middle managers, CEOs, directors, innovators) are organized, and why they sometimes feature skyrocketing levels and complex structures of compensation.
- Evaluate how financial transactions like buyouts, mergers and acquisitions, and recapitalizations affect employees and the composition and compensation of firms' labor force.
- Assess the composition of the workforce, and when diversity of skills and opinions is useful and when it is harmful for decision-making and firm value.
- Develop a toolbox of theoretical concepts relevant to analyzing human capital issues (and beyond).
- Gain a sound knowledge of empirical facts that are not yet available in a comprehensive written textbook or survey format.
- Ground ethical discussions of firms' human resource policies in a sound understanding of theory and empirical facts.

Prerequisites for participation

Necessary: –

Recommended: The course requires cross-disciplinary thinking and understanding of key concepts in accounting, finance, economics, and management at the level of the respective courses in the Master's curriculum. The course will introduce key theoretical concepts in economics (e.g., signaling, hold-up problems, principal-agent relations, etc.). No prior knowledge of these concepts is assumed, and all requisite tools from game theory and microeconomics will be introduced at a relatively informal level. However, tolerance for handling abstract concepts is required.

Module: FIN 580 (FIN 5800) Derivatives – Basic Strategies and Pricing

EN

Contents

This course deals with different derivatives. The functioning of various derivative instruments like forwards, futures, swaps, and options will be explained. Furthermore, derivatives strategies will be analyzed. A particular focus of the course is the valuation of different basic and exotic instruments. The theoretical basis will be presented in lectures, while exercise classes will provide the opportunity to apply the concepts in practice.

Learning outcomes

After the completion of this course, students will have gained a thorough understanding of the spectrum of derivative financial instruments and their functioning. Furthermore, they will have learned how to implement investment strategies using derivatives.

Students acquire a working knowledge of different valuation techniques, which is a necessary condition for trading these instruments and which also allows them to price new innovative products themselves.

Prerequisites for participation

Necessary: –

Recommended: Students should have successfully completed the Mannheim Bachelor finance modules (or equivalent courses). They should have an understanding of simple derivatives and basic pricing techniques on a Bachelor level before taking this course! A working knowledge of basic mathematics (analysis and optimization) and statistics (expected values, variances, covariances) is required.

Contents

This course provides an in-depth look at financial institutions and the role they play for financial markets today. The course will address questions such as: Which financial institutions exist? Why do they exist? What risks do they face? How do they manage those risks? How does the behavior of financial institutions impact financial markets and asset prices? How does their behavior impact the economy at large? How should we regulate financial institutions? The course Financial Institutions I will put emphasis on the analysis of banks.

Learning outcomes

After completing this course, students will have a thorough understanding of the economic reasons for the existence of financial institutions. Students will understand the eco-system of financial institutions and their role in the global financial markets.

Students will gain knowledge about what risks managers in financial institutions face and how they manage those risks. Students will also learn about current approaches and proposals for regulating financial institutions.

Prerequisites for participation

Necessary: –

Recommended: Every student participating in this course should have completed the equivalent of the 2-semester finance module, which is part of the Mannheim Bachelor program. Contents

This course provides an extensive coverage of bond markets. It discusses the characteristics of various types of bonds, their valuation, and the risk associated with bond investments. It further discusses bond portfolio management strategies.

Learning outcomes

After this course students are familiar with the theory and practice of bond market investments. They are acquainted with the valuation of various types of bonds, know tools to measure and manage the risk of bond portfolios and are able to devise and evaluate portfolio management strategies.

Prerequisites for participation

Necessary: –

Recommended: Students should have attended FIN 500 or be ready to acquire knowledge of the contents of that course as needed.

Contents

Traditional asset pricing theory and investment analysis treat the process of price formation as a black box. The actual structure of financial markets does not play a role, and frictions and transaction costs are disregarded. These issues, and market liquidity in particular, are of enormous practical importance. This is evidenced by the great attention regulators pay to issues of financial market structure (e.g. the MiFID directive of the EU), as well as by the attention market participants pay to trading costs. In recent years, many new markets have been created in an attempt to reduce transaction costs (e.g. the ATS in the US or Chi-X and Turquoise in Europe). The branch of financial economics that deals with these issues is called market microstructure. This course provides an introduction into the theoretical and empirical foundations of market microstructure.

Learning outcomes

This course familiarizes students with the institutional setting of today's securities markets. They will know how an exchange operates and what the distinguishing features and theoretical foundations of auction and dealer markets are. They will be able to understand and apply measures of market quality and liquidity. They will further understand how asset characteristics, risk aversion and asymmetric information affect the process of price formation and market liquidity.

Prerequisites for participation

Necessary: –

Recommended: Module FIN 500; Students should have a sound background in finance. They should be familiar with the different types of securities (stocks, bonds, derivatives), with modern investment analysis and the efficient markets hypothesis. They should also have basic knowledge in statistics and econometrics (unconditional and conditional expected values and variances, regression analysis and hypothesis testing).

no offering in spring 2027

Contents

The course provides students with an understanding of important empirical methods and their application in finance. It covers topics in asset pricing, corporate finance, and market microstructure. Students will learn to perform empirical analysis using the software package Stata. The course enables students to plan and carry out empirical research in finance on their own and prepares for an empirical seminar or master thesis in the finance area. Part of the course consists of the practical application of the methods learned in the lecture to various case studies.

Learning outcomes

The students will have a sound understanding of empirical methods and their underlying assumptions. The students will be able to choose appropriate methods for given empirical problems and apply them in an efficient way. The case studies enable the students to develop basic programming skills in Stata.

Prerequisites for participation

Necessary: –

Recommended: Module CC 502 or CC 503 and Module FIN 5XX or equivalent courses. Completing FIN 604 Stata in Finance or acquisition of equivalent knowledge is highly recommended.

Contents

The topic of this course is the practical application of the statistics program “Stata” in Finance research. The course contains three major sections: How to use Stata, an introduction to the usage of the most common databases in Finance at this university, and an application example.

In the first section, we will introduce project and data management with Stata. In addition, we will teach estimation techniques and programming basics. In the second section, we will show where to get access to common datasets in Finance research. In the last section, students will have the chance to apply their knowledge to a practical example.

The course is offered shortly after the start of the seminar theses, that is, at the beginning of January in the fall semester (HWS) and at the beginning of July in the spring semester (FSS).

Learning outcomes

The main aim of the course is to prepare students with practical methods for conducting empirical Finance research. Students learn how to load, manipulate, and evaluate data using Stata. Stata is the most popular statistics program used in the Finance research community. In addition, students learn where they can access popular databases used in Finance at the University of Mannheim. The main focus of the course lies on the practical application of the Stata software.

Prerequisites for participation

Necessary: –

Recommended: Due to a limited amount of seats in the computer lab, the number of participants will be limited. We will prefer students who are writing an empirical seminar thesis in the Finance Area in the semester when allocating spots.

Program-specific Competency Goals	CG 1, CG 4

Contents

This course covers recent technological innovations and the emergence of new players in the financial services industry that both fall under the umbrella term of FinTech. A special focus will be on blockchains and other relevant technologies and their application to decentralized finance, cryptocurrencies, and smart contracts. Other introduced innovations include alternative payment systems, crowd finance, artificial intelligence in finance, and robo advising, while also presenting associated risks and regulatory approaches.

Learning outcomes

After the completion of this course, students will have gained a thorough understanding of the FinTech industry. They will be able to describe its underlying technologies, analyze the industry's recent developments, recognize associated risks, and explain its impact on the more traditional financial services industry.

Prerequisites for participation

Necessary: None

Recommended: Basic knowledge of finance (e.g. present value methods, portfolio theory, equilibrium models, derivatives, trading, banking), mathematics (analysis, optimization) and statistics (e.g. mean, variance, correlation, and multivariate regression).

Module: FIN 607 (FIN 6070) The Economics of Gender in Households and Organizations

EN

Contents

Where do gender gaps come from and how can households, firms, and governments close them? Once a niche topic, the economics of gender now sits at the centre of debates about pay equity, promotion, caregiving, entrepreneurship, and corporate governance. This course will focus on gender roles in various contexts including intra-household decision-making and time allocation; human capital and fertility choices; the role of identity and social norms; leadership/promotions and institutional frameworks. We will cut through buzzwords and myths to clarify what the evidence shows and where uncertainty remains. We will use various approaches to understand the content: lectures, case studies, insights from practice, and students' presentations.

Learning outcomes

Upon successful completion of this course, students will be able to: 1. Explain core theories of gender economics and empirical evidence 2. Understand the gender gaps in wages, promotions and labor market 3. Analyze key drivers including economic and psychological factors that explain gender specific behaviors (risk taking, saving/retirement, credit use, entrepreneurship) and diagnose sources of observed differences. 4. Evaluate the effectiveness and trade-offs of gender-specific interventions such as childcare and parental leave, flexible work, pay transparency, and leadership/board quotas.

Module: FIN 608 (FIN 6080) Artificial Intelligence in Finance

EN

Contents

Der Kurs vermittelt ein anwendungsorientiertes Verständnis von Künstlicher Intelligenz im Bereich Finance. In einem zunächst methodischen Teil werden die zentralen technischen Grundlagen kompakt behandelt — klassisches Machine Learning, Deep Learning, Transformer-Architekturen sowie Large Language Models inklusive Prompting, Retrieval-Augmented Generation, agentenbasierter Systeme und Evaluations-Methoden — stets mit Fokus auf finanzwirtschaftliche Anwendung. Den Schwerpunkt bilden anschließend konkrete Anwendungsfelder entlang der zentralen finanzwirtschaftlichen Domänen: Machine Learning im Asset Pricing und Trading, Natural Language Processing für Finanzdokumente und Earnings Calls, der Einsatz von KI in Banking, Credit, Risk und RegTech sowie der Einsatz generativer KI in den Kapitalmärkten. Zwei darauf aufbauende, dezidiert anwendungsbezogene Einheiten zeigen, wie KI gezielt im finanzwirtschaftlichen Forschungs-Workflow (AI for Research) sowie beim Aufbau finance-bezogener Ventures (AI for Ventures) eingesetzt werden kann. Ausgewählte Gastvorträge aus der Praxis ergänzen den Kurs. Als Abschlussleistung bearbeitet jedes Team in Kleingruppen entweder ein eigenständiges empirisches Forschungsprojekt unter umfangreicher Nutzung von KI oder ein tief ausgearbeitetes unternehmerisches Projekt im Fintech-Bereich.

Learning outcomes

Nach Bestehen des Moduls

- verstehen Studierende die methodischen Grundlagen moderner KI-Verfahren — von klassischem Machine Learning über Deep Learning und Transformer bis hin zu Large Language Models und agentenbasierten Systemen — und können deren Funktionsweise und Limitationen erläutern;
- sind Studierende in der Lage, KI-Methoden auf zentrale finanzwirtschaftliche Anwendungsfelder (u. a. Asset Pricing, Trading, Textanalyse, Credit Risk, RegTech) abzubilden und kritisch zu bewerten;
- können Studierende KI-gestützte Forschungs- und Produktentwicklungs-Workflows eigenständig konzipieren, durchführen sowie Resultate methodisch validieren und reproduzierbar dokumentieren;

haben Studierende die Fähigkeit erworben, ein eigenständiges Projekt auf hohem Niveau zu planen, umzusetzen und professionell zu präsentieren.

Prerequisites for participation

Contents

There is abundant evidence suggesting that the standard economic paradigm of rational investors does not adequately describe behavior in financial markets. Behavioral Finance examines how individuals' attitudes and behavior affect their financial decisions. This course reviews recent research on possible mispricing in financial markets due to the nature of psychological biases. Moreover the course deals with behavioral finance models explaining investor behavior or market anomalies when rational models provide no sufficient explanations. Topics will include among others overconfidence, prospect theory, heuristic driven biases and frame dependence.

Learning outcomes

Behavioral finance applies scientific research on human and social cognitive and emotional biases. After completing this course, students will be able to better understand economic decisions and how they affect market prices and returns. They will know how behavioral findings are integrated with neo-classical theory.

Prerequisites for participation

Necessary: FIN 500 or FIN540 or 550 or FIN580 or FIN590 or FIN601 or FIN602 or FIN603 or FIN604 or FIN605 or FIN606 or FIN630 or FIN682 or FIN684 or FIN685 or FIN686 (except for exchange students)

Recommended: Every student participating in this course should have completed the 2-semester finance module of the Mannheim Bachelor program (or equivalent courses) and the module Decisions Analysis. The lecture generally assumes basic knowledge in mathematics (calculus, optimization) and statistics (mean, variance, standard deviation).

Contents

In this course, conflicts of interest between the firm and its stakeholders will be analyzed and mechanisms to mitigate these conflicts will be discussed. In the first part of the course, theoretical models on information asymmetries and corporate governance problems are discussed. The second part of the course will focus on common corporate governance problems and different institutional governance frameworks and ownership structures across countries. A special focus will be on the German Corporate Governance Code. Finally, we examine several internal and external governance mechanisms, including the market for corporate control, activist investors, executive compensation, and the role of the board of directors. Special emphasis will be on the valuation effect of corporate governance and the question whether some corporate governance mechanisms are superior to others.

Learning outcomes

Students should develop an understanding of important issues in corporate governance and of its relevance in a social, political, and economic context. They will be able to apply theoretical models on principal-agent conflicts to different corporate governance problems. Furthermore, students will know how to assess the effectiveness of different corporate governance mechanisms. In addition to their knowledge on corporate governance theory, they will be able to critically discuss the empirical evidence on the importance and effectiveness of various corporate governance mechanisms.

Prerequisites for participation

Necessary: –

Recommended: Knowledge in business economics (Module BE 510, BE 511 or equivalent courses) and econometrics (Module CC 502, CC 503 or equivalent courses) is highly recommended. Introductory course in corporate finance on the level of Brealey, Myers and Allen, *Corporate Finance*, (McGraw-Hill, 10th edition, 2010) is also strongly recommended.

Modul: FIN 661 (FIN 6610) Responsible Leadership for Honors Program Students

DE

EN

Contents

Dieser Kurs, der Studierenden des Honors Program offensteht, hilft den Teilnehmern, ein tieferes Verständnis für ihre persönliche Verantwortung als Führungskraft von morgen zu entwickeln. Welchen Beitrag leiste ich als Führungskraft von morgen für die Gesellschaft? Wie kann ich meine Talente und Fähigkeiten als Wirtschaftsstudenten sinnvoll einsetzen? Der Kurs soll durch den Austausch mit Führungskräften, die bereits Führungsverantwortung tragen, durch kreative interdisziplinäre Impulse und durch Unterrichtseinheiten dazu beitragen, diese zentralen wirtschaftlichen Fragen unserer Zeit zu beantworten.

Learning outcomes

Durch die Teilnahme an diesem Kurs haben die Studierenden begonnen, einen persönlichen Rahmen zu entwickeln, der ihre persönliche Verantwortung als Führungskraft von morgen erfasst. Die Studierenden werden ein tieferes Verständnis für die Beziehung zwischen persönlicher Verantwortung, Verantwortung als Führungskraft und Verantwortung für die Gesellschaft entwickeln. Die Studierenden werden von Führungskräften, Wirtschaftsprofessoren und anderen Personen erfahren haben, was es bedeutet, verantwortungsvoll zu führen. Durch die Teilnahme an diesem Kurs werden die Studierenden ihre Fähigkeit verbessert haben, die Auswirkungen von Managemententscheidungen auf die Gesellschaft zu analysieren und zu bewerten.

Prerequisites for participation

Necessary: Studierende müssen am Honors Program teilnehmen.

Module: FIN 682 (FIN 6820) International Asset Management - Modern Investment Management, Responsible Investing and Fintech

EN

Contents

The core of this course deals with asset management for institutional investors in an international context. We will cover the structure of the delegated investment markets around the world with a focus on the U.S. and Europe. The focus will be on traditional mutual funds and third-party asset management. Besides the classical asset management theory, this course will place a great weight on the practical implementation of portfolio strategies and the problems that can arise. We will learn how to measure the performance of investment strategies and of fund managers. Furthermore, behavioral aspects (irrational behavior of mutual fund investors and managers) will be discussed. Finally, we discuss recent trends in asset management, e.g., responsible investing (ESG) as well as crypto currencies and Decentralized Finance (De-Fi).

Learning outcomes

After the completion of this course, students will have gained a thorough understanding of the mutual fund industry and institutional asset management with a bias towards quantitatively driven asset management. They will be familiar with the necessary tools to manage a mutual fund themselves, advise mutual fund investors, invest in mutual funds, and to work in the management of a mutual fund company.

Prerequisites for participation

Necessary: –

Recommended: A working knowledge of basic mathematics (analysis and optimization) and statistics (expected values, variances, covariances) as well as a sound understanding of portfolio theory (level of FIN 500, which we urgently suggest students to take before this course) is required.

Contents

This course provides an in-depth look at financial institutions and the role they play for financial markets today. The course will address questions such as: Which financial institutions exist? Why do they exist? What risks do they face? How do they manage those risks? How does the behavior of financial institutions impact financial markets and asset prices? How does their behavior impact the economy at large? How should we regulate financial institutions? The course Financial Institutions II will put emphasis on important non-bank financial institutions (e.g., pension funds, mutual funds, hedge funds etc.).

Learning outcomes

After completing this course, students will have a thorough understanding of the economic reasons for the existence of non-bank financial institutions. Students will understand the eco-system of non-bank financial institutions and their role in the global financial markets. Students will gain knowledge about what risks managers in non-bank financial institutions face and how they manage those risks.

Students will also learn how non-bank financial institutions impact asset prices and financial market outcomes. Finally, students will learn about current approaches and proposals for regulating financial institutions.

Prerequisites for participation

Necessary: –

Recommended: Every student participating in this course should have completed the equivalent of the 2-semester finance module, which is part of the Mannheim Bachelor program. The lectures generally assume basic knowledge in accounting (balance sheets, income statements, financial ratios), finance (present value methods, portfolio theory, CAPM), mathematics (calculus, optimization) and statistics (mean, variance, standard deviation, univariate and multivariate regressions). It is strongly recommended that students take the course Financial Institutions I (FIN 590) before taking Financial Institutions II (FIN 684).

-----------------------------------	------

Contents

This course provides an in-depth look into selected topics in financial regulation. The course will be offered in three blocked all-day sessions. The first session will analyze financial regulation from the perspective of a commercial bank manager. The second session will analyze financial regulation from the perspective of a financial regulator, such as the European Central Bank. Core themes throughout the course will be the proper assessment and management of financial risks in accordance with the existing regulatory framework for banks. Students will be tasked with a graded group assignment that provides the opportunity to translate the knowledge acquired in the first two sessions into practice by analyzing regulatory issues for existing banks. Groups will present their results in the final session.

Learning outcomes

After completing this course, students will have a thorough understanding of some of the key features of the current regulatory framework for banks and how they affect banks and regulators. Students acquire tools to assess and manage central regulatory banking risks. Students will have analyzed, prepared a report on, and presented results on regulatory issues facing a real bank.

Modul: FIN 703 (FIN 7030) Seminar in Financial Markets

DE

EN

Contents

The seminar covers specific issues relating to financial markets in depth. The seminar is organized as a block seminar. Prior to the seminar students have to write a seminar paper on a particular topic. This paper has to be presented during the seminar. Students are also expected to actively participate in the discussion during the seminar.

Learning outcomes

Students learn how to write a research paper. The seminar is thus an important prerequisite for the master thesis. During the seminar the students will also train their presentation and discussion skills.

Prerequisites for participation

Necessary: Participants must have successfully completed at least one core course (FIN 5XX) from the Finance area.

Recommended: Participation in the seminar requires a sound background in finance, a good command of English and of basic statistical and econometric techniques. Students are expected to be able to read and understand current research papers.

Module: FIN 731 (FIN 7310) Seminar Corporate Governance

EN

Contents

In this course specific topics from various fields of Finance including Corporate Governance will be dealt with in depth. Students will have to work on the main topic of the seminar in some detail and write a term paper on a specific sub-topic that will be allocated to them. In the seminar, students will present their own paper, discuss other students' papers, and participate actively in the classroom discussions.

Learning outcomes

Students will learn how to independently work on a research paper. Thus, the seminar paper also serves as preparation for a Master's thesis. Furthermore, students learn how to present research results and how to contribute to scientific discussions.

Prerequisites for participation

Necessary: Participants must have successfully completed at least one core course (FIN 5XX) from the Finance area.

Recommended: Basic knowledge of statistics and econometrics is assumed and participants should be motivated to undertake empirical work. We recommend that participating students have taken the module CC 502 (Applied Econometrics).

3.3 AREA INFORMATION SYSTEMS

Module: IS 512 (IS 5120) IT Management in the Digital Age

EN

Contents

Modern organizations are influenced and driven by information technology (IT) and information systems (IS) in various ways. As competition becomes borderless, organizations are forced to continually examine ways to operate more effectively and efficiently. Information technology and information systems are a crucial means of obtaining these goals in the digital Age. IT and IS are also key enablers of new products, services and processes. This course is designed for students who desire an insightful synopsis of IT management concepts and practices. It is the objective of this course to offer profound insights into information systems and information technology management. Strategic and tactical issues are given more attention than operational aspects.

Learning outcomes

This course is designed for students who desire an insightful synopsis of IT management concepts and practices. After successfully completing the course, students should be able to evaluate and initiate strategic IT initiatives, to organize (govern) the IT function, to understand the role of the Chief Information Officer in order to lead this function, to analyze, design and direct outsourcing as well as offshoring initiatives, and to control the IT function from a top management and risk management perspective. IT management issues will be discussed from a planning, leadership, governance, sourcing and controlling perspective. Topics include:

- Business / IT Alignment and Strategic IT Planning
- Governance frameworks, IT (de-)centralization and the role of the CIO
- The IT sourcing decision, hybrid arrangements, and offshoring
- IT controlling and IT risk management.

Prerequisites for participation

Necessary: –

Module: IS 513 (IS 5130) Applied IT Management in the Digital Age

EN

Contents

IT management today is challenged by fast technological change, new digital opportunities, growing cost pressure, and increasing business and regulatory requirements. IT management needs to ensure that IT functions become much more agile, flexible and efficient than ever before. For a state-of-the-art IT management a solid know-how regarding

- Intelligent demand management,
- Application and data architecture,
- IT infrastructure,
- Organization and workforce management,
- Business/IT governance and lean IT processes, and
- Sourcing and location setup incl. vendor and partner management

are crucial.

In addition, it is expected that IT managers have a good understanding of the core business of their company (business/IT alignment) and sound IT cost management capabilities.

Furthermore, IT managers need to be able to understand opportunities of the digital age, evaluate the value of new technologies, and drive digital transformation jointly with the business.

Learning outcomes

The lecture addresses key challenges that IT management is facing today and explains the capabilities and tools required to manage these challenges successfully. The concrete application of the lectured content will be explained using selected case studies. The lecture focuses on banking as one concrete industry example. The fundamental principles, however, can be applied across industries.

Module: IS 540 (IS 5400) Management of Enterprise Systems

EN

Contents

Enterprise Systems (ES) represent a specific category of information systems. They build on pre-packaged industry best practices embedded in standardized product software and target large-scale integration of data and business processes across all company's functional areas and beyond company borderlines. Enterprise Systems strongly interplay with work practices of individual employees as well as organizational structures shaping and being shaped by individuals' behavior. The ES lifecycle involves various entities both external and internal to the company. As such, they impact multiple levels of a company, ranging from the individual employee to groups to the entire organization and even its associated network. As critical as the ability to manage these ES is to most businesses, as challenging it is as well. This module is designed to provide a comprehensive insight into theoretical foundations, concepts, tools, and current practice of ES.

The lecture is complemented with exercises and a case study. Students get the opportunity to collect hands-on experiences with commercial software products and analyze and propose solutions for a specific ES challenge. Thus, allowing them to build up first-hand experience with this important aspect for managing businesses successfully.

Learning outcomes

The students will

- understand basic concepts and types of Enterprise Systems,
- understand key characteristics of software products (e.g. Enterprise Resource Planning, Business Intelligence or Collaboration) on which ES are built on,
- understand the ES lifecycle including a development, implementation, and postimplementation phase,
- get practical insights into the real-world ES.

Module: IS 541 (IS 5410) Theories and Methods in Information Systems

EN

Contents

This course provides students with an introduction to scientific research methods and theories in the field of information systems. Master students gain a broad overview of the strengths and weaknesses of different methods and theoretical perspectives. This overview prepares them for conducting own, bounded research projects (e.g., master theses) as a first step towards a scientific career. In this course, students come to understand the importance of theory for organizing and cumulating knowledge as well as the importance of rigorous empirical methods to establish the validity of findings. The course covers publications in premier IS journals to exemplify and discuss procedures of qualitative, quantitative, and design-oriented research. The course is taught in a seminar style, requiring students to prepare readings for discussions in class. Attendance in classroom sessions is mandatory. Students are required to prepare textbook chapters and selected readings on IS research in advance of the course.

A list of required readings is distributed after registration. In addition, students are assigned contemporary articles published in IS journals that must be evaluated based on the topics covered in the course and presented during classroom sessions. Each student finally writes a term paper of four to five pages on an assigned topic.

Learning outcomes

After completing the course, students

- are able to prepare, plan, and execute own research endeavors (e.g., master thesis).
- understand the relevance of methods and theories in meaningful research.
- know quality criteria and corresponding means to improve research designs.
- have gained an overview of most common methods and theories in IS research.

Prerequisites for participation

Contents

This course gives an overview of blockchain technology and applications. It covers basic cryptographic principles and socio-economic structures. Decentralized principles and applications are discussed. Emphasis will be put on user interfaces and system architectures. Token standards such as ERC 721 or ERC20 are covered and exemplary applications are presented.

The exercises part of the course covers the Solidity language for programming the Ethereum blockchain. Students need to deploy a number of programming assignments on the course's blockchain and get tokens for successful submissions. Students who collected enough tokens gain access to the final exam.

Learning outcomes

Upon successful completion of this course, students:

- understand the basic functional mechanisms behind public blockchain;
- can analyze given public blockchains and their structure;
- have acquired knowledge about standards and decentralized applications on blockchains;
- can program smart contracts in Solidity and deploy them on Ethereum-compatible blockchains.
- can query and extract information from Ethereum-compatible blockchains.

Prerequisites for participation

Necessary: –

Recommended: Knowledge of computer programming (in any language).

Module: IS 557 (IS 5570) Scientific Programming with Python

EN

Contents

This course introduces students to principles of scientific programming with the Python programming language. Aside from basic Python syntax, more advanced programming concepts and important scientific libraries essential for data analysis and research are introduced.

Learning outcomes

On completion of the course students should be familiar with the Python programming language and able to solve scientific and complex problems in Python. This covers the application of scientific libraries, some machine learning techniques, and the collection of data with web mining.

Acquired skills:

- Handling of scientific programming projects
- Independent choice of data-structures and methods to solve a given problem
- Knowledge about the different scientific libraries and their advantages
- Data preprocessing, analysis and visualization

Prerequisites for participation

Necessary: –

Recommended: Basic knowledge about programming languages, statistics, and linear algebra.

Studieninhalte

The course examines strategic IT leadership as a central driver of digital transformation within organizations. It explores how IT is prioritized, governed, and evaluated in terms of its cost and value contribution to the organization. In addition, the course addresses leadership challenges in IT, including project governance, talent management, and risk management and crisis response. Finally, it considers how emerging technologies and innovation influence strategic decision-making at the executive level. Students will be working in groups, with each group responsible for preparing and presenting chapters from the accompanying textbook. Participation in the course is mandatory, as the presentations form an integral part of the course.

Angestrebte Lernergebnisse

Upon successful completion of this course, students will ...

... understand the strategic role of IT in shaping the digital transformation of business processes and critically evaluate IT priorities and portfolio decisions

... understand key concepts of strategic IT leadership, including IT governance, value creation, risk management, and innovation management

... analyze challenges faced by CIOs and IT leaders in organizational environments

... summarize and communicate insights from the IT leadership domain in a structured presentation, critically evaluating its impact on the whole organization

Digital innovations influence every aspect of our lives in this increasingly technological world. Firms that pursue digital innovations must think carefully about how digital technologies shape the nature, process and outcomes of innovation as well as the long- and short-term social, economic and cultural consequences of their offerings. The attempts to contribute to building a transdisciplinary understanding of digital innovation by bringing together a diverse set of research papers from leading scholars from business, engineering, economics, science and public policy. Their distinct perspectives advance ideas and principles intended to set the agenda for current and future research on digital innovation in ways that inform primarily firm-level strategies and practices. The course provides scope and depth for master students interested in information systems and digital technologies, innovation and entrepreneurship, strategy, and digital platforms and ecosystems. In addition, it is informative to scholars interested in the impact of digital technologies on organizations and the broader society. The course will be taught on a flipped classroom basis. A flipped classroom is an instructional strategy and a type of blended learning focused on student engagement and active learning, giving the instructor a better opportunity to deal with mixed levels, student difficulties, and differentiated learning preferences during in-class time.

This format intentionally shifts instruction to a student-centred model in which time in the classroom is used to explore topics in greater depth and create meaningful learning opportunities while students are initially introduced to new topics outside of the classroom. Content delivery takes place through mandatory pre-readings and collaborative class discussions.

Learning outcomes

Students that accomplish this course will

- understand the foundations of digital innovations,
- be proficient in digital platforms, ecosystems, and entrepreneurship,
- advance their knowledge on business models and value creation in digital innovation,
- comprehend its impact on the future of work, and
- be exposed to transdisciplinary application domains.

Recent advances in artificial intelligence (AI) are reshaping the economy and altering how firms create and capture value. Managers must understand where AI generates measurable business impact, where its limitations persist, and how it can be deployed effectively within organizational and market contexts. This course develops the conceptual foundations and economic frameworks required to analyze, evaluate, and strategically apply AI in business settings. This course is designed for business students who are interested in the intersection between business strategy and technology. This course does not involve programming. The emphasis is on strategic and economic reasoning. The course first develops intuition for the conceptual foundations of artificial intelligence as a technology, especially artificial neural networks and machine learning. It then examines capabilities, limitations, and underlying economics, and explains how these characteristics shape which business applications are feasible and which market transformation is to be expected. Building on this foundation, students learn how firms create and capture value by integrating AI into products and services. The course then provides frameworks to analyze the adoption and diffusion of AI across firms and industries. Finally, it examines the economic implications of AI, including its effects on labor and automation, and externalities relevant for corporate decision-making, such as bias, sustainability, and privacy. The course combines conceptual foundations provided in lectures with hands-on application in exercise sessions.

In the exercise sessions, students work on exercise sheets to deepen the conceptual foundation and application of lecture contents.

Learning outcomes

After successfully completing the course, students..

- ..can explain the conceptual foundation of artificial neural networks and machine learning,
- ..can evaluate the emerging business capabilities, limitations, and economic characteristics,
- ..can evaluate business and monetization models to create and capture value from AI,
- ..can analyze patterns of technological diffusion, performance improvement, and disruption, and apply these frameworks to AI,
- ..can discuss the broader economic and managerial implications of AI for organizations and markets.

Prerequisites for participation

Necessary: Successful completion of at least one of the following courses: CC501, CC502, CC503, BE510, CS500, CS530, CS550, CS560, CS652, IE500, IE560. Concurrent enrollment is not sufficient.

Module: IS 611 (IS 6110) Advanced Topics in Large Language Models

EN

Contents

This course examines advanced topics in Large Language Models with a primary focus on advanced topics, for example the ethical, social, economic, organizational, and governance implications. The course explores how LLMs are deployed, evaluated, governed, and contested in real-world settings.

Particular emphasis is placed on questions such as bias and fairness, transparency and accountability, privacy and surveillance, misinformation and manipulation, intellectual property, safety and misuse, inequalities in access and power, the transformation of knowledge work, and the role of LLMs in societies and organizations. The course may also address adjacent topics such as regulation, platform power, sustainability, human-AI interaction, cultural effects, and methodological challenges in studying LLMs in society.

The exercises part of the course deepens the material through case discussions, critical reading of current research, applied analyses, and project-based work.

Learning outcomes

Upon successful completion of this course, students:

- * can critically assess the ethical challenges arising from the development and deployment of Large Language Models;
- * can analyze the social consequences of LLMs for communication, education, work, public discourse, and institutions;
- * can assess risks related to bias, fairness, privacy, transparency, safety, misuse, and accountability;
- * can apply conceptual and critical tools to examine real-world use cases of LLM-based systems;
- * can develop well-founded positions on the responsible design, deployment, and governance of LLMs.

Prerequisites for participation

Necessary: –

Recommended: Prior knowledge of natural language processing, including familiarity with core concepts of modern language models!

Knowledge of machine learning, AI, and computer programming.

Module: IS 612 (IS 6120) Product Experimentation and Analytics

EN

Contents

This course examines how firms improve digital products and services – particularly their features, marketing, advertisement, retail, and pricing – through data-driven experimentation and analytics. In many organizations, critical product decisions must be made under uncertainty and at scale. Leading firms such as Amazon, Netflix, Google, Booking.com, and Coca-Cola address this challenge through continuous experimentation – for example, by A/B testing digital services and marketing campaigns – and systematic analysis of behavioral data. The course provides business students with a rigorous understanding of these approaches. Students learn how to define and interpret product metrics, design experiments, and translate empirical results into actionable business conclusions. The course covers key state-of-the-art methods in product experimentation and analytics, including A/B testing, multi-armed bandits, and difference-in-differences. The course is aimed at business students with an interest in analytics. The course combines conceptual foundations provided in lectures with hands-on application in exercise sessions.

In the exercise sessions, students work on exercise sheets and analyze real-world data using R. No prior experience in programming or statistical software (e.g., R) is required. Students receive an introduction to R as part of the course.

Learning outcomes

After successfully completing the course, students..

- ..understand how firms use experimentation and analytics methods to inform product decisions about pricing, advertising, recommendations, and consumer experience
- ..can evaluate product experiments and apply modern analytics methods such as A/B testing, bandits, and difference-in-differences,
- ..analyze experimental and product data and interpret empirical results,
- ..draw business-relevant conclusions and communicate insights in a clear manner.

Prerequisites for participation

Necessary: Successful completion of at least one of the following courses: CC501, CC502, CC503, BE510, CS500, CS530, CS550, CS560, CS652, IE500, IE560. Concurrent enrollment is not sufficient.

Module: IS 613 (IS 6130) Applied Project in Enterprise Cloud Design and Development

EN

Contents

The goal of this term project is to collaboratively develop a software artifact to solve a real-world business problem in a student development team environment. We offer a project-based lecture with hands-on experience for enterprise cloud software development as well as general agile software development practices, lean management principles, as well as design thinking and business model innovation practices. Students will learn about innovative product and process design for software development which then can be directly applied in exercise sessions and project iterations. The used technology will depend on the students' skills and experience. Prototypes must be developed and deployed with state-of-the-art cloud technology.

Learning outcomes

After completing the project, students will be able to:

- learn how to apply design principles for developing user centered applications,
- understand the difficulties involved in team-based software development,
- improve both product design and software engineering skills
- improve the ability to work in teams and collaborate effectively
- and use state-of-the-art software engineering methods and tools.

Prerequisites for participation

Necessary: IS 615 (parallel attendance possible)

Recommended: This course is designed for master students of management or information systems. A basic understanding of how to program information systems is helpful.

Module: IS 614 (IS 6140) Corporate Knowledge Management

EN

Contents

Companies have realized that the knowledge of their professionals is a decisive factor in competition. Firms are able to differentiate against their competitors through superior knowledge in the long term. This lecture deals with the question of how the creation acquisition, transfer, storage, retrieval, and use of knowledge can be supported with the information technology and where the limits of such efforts are. It also addresses how to design information technology to support different knowledge processes.

Learning outcomes

Course participants will be able to:

- explain the role and importance of knowledge for organizations
- understand and explain the processes of knowledge management (KM)
- describe and evaluate the possibilities to support the different knowledge processes through information technology
- understand and evaluate different design principles of KM systems
- evaluate and apply organizational and technological mechanisms that ensure the use of KM systems

Module: IS 615 (IS 6150) Enterprise Cloud Design and Development

EN

Contents

Enterprise software is expected to serve a plethora of customer needs from different industries in an integrated and seamless way. Traditionally, the market leaders provided integrated enterprise resource planning (ERP) solutions as a suite of business applications that are being operated by their customers on-premises or hosted as isolated instances by third party providers. Today, customers and end users expect fully cloud-based provisioning so that business models leaving the operations and related costs with the vendors of enterprise software. Hence, established software vendors have to rethink and improve the way they organize development in terms of skills and organizational design, development processes and methodology, business models as well as tools and technologies needed. This academic lecture includes agile software development practices including multi-team coordination and planning as well as empirical process control and traceability management. Moreover, lean thinking combined with Design Thinking and related practices are increasingly adopted and intertwined in the software industry. The goal of this module is to convey approaches from research and industry experience together with practical application based on concrete enterprise cloud software challenges including both, lecture, and workshop formats.

A combination with IS 613 as related term project applying the content is highly recommended.

Learning outcomes

After completing the class, students will be able to:

- Understand specific issues and challenges of cloud-based enterprise software;
- Understand basic issues and challenges in enterprise software development?;
- Understand and apply large-scale agile development based on lean principles;
- Understand the principles of multi-team coordination and planning as well as
- Understand empirical process control and traceability management in enterprise software development;
- Understand and apply Design Thinking and related innovation practices;
- Understand and evaluate business models for enterprise software solutions?;
- Understand and apply how to bring all of this together in enterprise reality;
- Understand and evaluate state-of-the-art software engineering methods;
- Understand and explain particular success strategies recommended by practitioners.

Module: IS 617 (IS 6170) Large Language Models for the Economic and Social Sciences

EN

Contents

This course aims to equip students with the theoretical foundations and practical skills necessary to leverage Large Language Models (LLMs) in computational social science research. Students will explore how LLMs can be used for analyzing social and economic data, modeling human behavior, and generating insights from large-scale data sources.

Learning outcomes

Students will acquire knowledge of state-of-the-art principles and methods for developing and using Large Language Models. They will also learn how to use them for applied data analysis and empirical research (MK1, MK2, MF3)

Methodological competence:

Successful participants will be able to understand state-of-the-art LLM methods and select, apply and evaluate the most appropriate techniques for various use cases and applications (MF3). They will also learn in analyzing and summarizing recent literature on LLMs (MF2)

Prerequisites for participation

no offering in the academic year 2026/2027

Contents

This module aims to provide students with the analytical skills and methodological tools needed to collect, process, and analyze web and social media data for social and economic research applications.

Learning outcomes

Students will learn how to collect and analyze social media data from a variety of platforms including Reddit, Wikipedia and TikTok for the purpose of studying societally relevant question (MK1). They will learn about platform affordances of the social media platforms generating this data and its impact (MK2).

Competence:

Students will develop quantitative data analysis skills tailored to analyzing unstructured social media data, e.g., applied text analysis and network analysis (MF3). Students will learn social media data-related concepts by executing a project (MF1).

Contents

The lecture gives an introduction to the analysis of networks. It includes theoretical foundations of social networks (definitions, representation as a graph, local structures), elementary graph algorithms (shortest path, clustering coefficient, ...), centrality measures for social networks (PageRank, betweenness centrality, ...), methods for community detection, phenomena in empirical social networks (scale-free networks, small-world phenomenon, homophilia, ...), graph models (random graphs, preferential attachment,...), robustness of graphs, as well as dynamics in networks, epidemics and information cascades.

Learning outcomes

Knowledge: Upon successful completion of this module, students will have developed an understanding of basic concepts and algorithms for analyzing networks and have acquired knowledge of empirically occurring phenomena in networks. Furthermore, the students get an overview of current analysis tools of social networks.

Skills: The students learn how to analyze empirical social networks with regard to their structure and mathematical properties such as the determination of central nodes, as well as methods to understand dynamics in social networks. In addition, the students learn how to use the most common program libraries for analyzing social networks.

Competences: The students should be able to effectively use analysis methods for social networks in other areas of application.

Prerequisites for participation

Necessary: –

Recommended: Basic knowledge of algorithms and data structures as well as programming concepts and methods, practical programming skills (Python), basic knowledge of statistics.

no offering in the academic year 2026/2027

Contents

The achievement of the learning goals is pursued by practicing on the basis of personally assigned in-depth scientific topics as well as by actively participating in the presentation dates. The organizer will choose subject areas within the field of Public Blockchains and provide scientific papers to students to work through.

Learning outcomes

Skills: On the basis of suitable literature, in particular original scientific articles, students independently familiarize themselves with a topic in data-science, classify and narrow down the topic appropriately and develop a critical evaluation.

Students work out concepts, procedures and results of a given topic clearly and with appropriate formalisms in a timely manner and to a defined extent in depth in writing; Evidence of independent development by presenting self-selected examples. Descriptive oral presentation of an in-depth data science topic using suitable media and examples in a given format.

Module: IS 629 (IS 6290) Agile Software Product Management and Design

EN

Contents

More and more products, from consumer to business markets, show an ever-increasing amount of software at their very heart. The ability to understand, design, and manage software-intensive products has become of great importance to ensure sustainable success across all industries. This module introduces key aspects of the entire software product lifecycle, ranging from product strategy and planning, to the actual product development and finally the postdevelopment phase covering aspects such as the product launch and product support. Furthermore, the interplay between processes, people, and practices will be discussed and contemporary software development paradigms will be framed into this interplay. This course puts specific emphasis on the two roles of the product manager and the product designer (also: Usability / User Experience Professional) within software development. Following an interdisciplinary perspective, this course will introduce key concepts from the field of management, marketing and human computer interaction.

The course contents will be put into a practical perspective by selected industry talks. Furthermore, as part of a case study, the students will be asked to analyze and propose solutions for a given software product development challenge leveraging the knowledge acquired within the lecture and industry talks.

Learning outcomes

Students

- learn basic concepts and characteristics of software products and the associated software product lifecycle.
- understand the underlying mechanisms for a successful interplay between people, processes, and practices within product development.
- understand key concepts and methods required for fulfilling the product management and product design role.
- analyze and propose solutions for a given software product challenge along the entire lifecycle.

Module: IS 635 (IS 6350) Forschungsmethoden Data-Science

EN

Contents

In this colloquium, student research projects in different phases of development will be presented and critically discussed and reflected upon together. Particular attention will be paid to the formulation of precise research questions, the development of robust experimental setups, the selection and pre-processing of data sets, the selection and design of different validation methods and the critical assessment of research results in a manner that clearly goes beyond the projects of individual students. In a participatory approach, students are introduced to the scientific approach and acquire initial knowledge of the presentation, assessment, criticism and further development of scientific plans and results.

Learning outcomes

After passing the colloquium, students are able to

1. present research projects, methods and results scientifically
2. scientifically assess and criticize research projects, methods and results
3. further develop research projects, methods and results across various research cases and domains under the supervision of the instructor.

In the digital age, techniques to automatically process textual content have become ubiquitous. Given the breakneck speed at which people produce and consume textual content online – e.g., on micro-blogging and other collaborative Web platforms like wikis, forums, etc. – there is an ever-increasing need for systems that automatically understand human language, answer natural language questions, translate text, and so on. This class will provide a complete introduction to state-of-the-art principles and methods of Natural Language Processing (NLP). The main focus will be on statistical techniques, and their application to a wide variety of problems. This is because statistics and NLP are nowadays highly intertwined, since many NLP problems can be formulated as problems of statistical inference, and statistical methods, in turn, represent de-facto the standard way to solve many, if not the majority, of NLP problems.

Learning outcomes

Students will acquire knowledge of state-of-the-art principles and methods of Natural Language Processing, with a specific focus on the application of statistical methods to human language technologies.

Successful participants will be able to understand state-of-the-art methods for Natural Language Processing, as well as being able to select, apply and evaluate the most appropriate techniques for a variety of different practical and application-oriented scenarios.

Prerequisites for participation

Necessary: –

Recommended: Basic knowledge of programming concepts and methods, practical programming skills (Python).

Module: IS 703 (IS 7030) Master Seminar "AI, Platforms, and the Digital Economy"

EN

Contents

Contents: The seminar examines frontier research on how artificial intelligence and digital technologies change firms, consumer behavior, and markets. It focuses on highly relevant business questions such as how AI affects employee productivity, decision-making, and innovation; how digital platforms and social media shape competition and consumer behavior; and how new technologies create broader economic and societal effects. This seminar is aimed at business students. Students engage with state-of-the-art research on topics such as whether AI helps employees work faster and better, how platforms such as Amazon, Uber, or app stores influence market competition, how recommendation algorithms and social media platform features affect attention and demand, and how digital technologies can generate externalities such as misinformation, algorithmic bias, and sustainability challenges. The goal of the seminar is to understand the consequences of artificial intelligence and digital technologies for business strategy and markets. Each participant will be assigned a frontier research paper in a topic area of their choice and will analyze it in depth throughout the seminar. Students learn how to identify the paper's central research question, theoretical foundations, empirical strategy, and main contribution. They also gain experience on how to identify complementary, relevant academic literature. They also learn how to critically assess the paper's assumptions, research design, methodology, and limitations, and derive a promising research proposal for future research by themselves. To support this process, the seminar opens with a kick-off session on how to search for, read, interpret, and evaluate academic research papers.

A list of topics covered in the seminar is available here: <https://www.bwl.uni-mannheim.de/foerderer/lehre/lehrrangebot/is-7030-master-seminar/>

Learning outcomes

After completing this course, students..

- ..have developed a rigorous understanding of their assigned frontier research paper, including its research question, theoretical foundations, empirical strategy, and contribution,
- ..can critically evaluate their assigned frontier research paper and identify its strengths, limitations, and opportunities for future work,
- ..can identify research papers closely related to their assigned frontier paper,
- ..can independently develop these insights into a well-structured academic paper,
- ..and can present and defend their analysis in a formal academic presentation and discuss other participants' papers.

Prerequisites for participation

Necessary: Successful completion of IS 609 (IS 6090) or IS 608 (IS 6080) or IS 612 (IS 6120) before the seminar kick-off. Concurrent enrollment is not sufficient.

Module: IS 742 (IS 7420) Seminar Trends in Enterprise Systems

EN

Contents

This module is a research seminar where state-of-the-art research topics are discussed. Students systematically explore a research topic from the enterprise systems domain. They present their work in class for discussion and will write a seminar paper, following academic guidelines.

Learning outcomes

After completing this seminar, students will be able to summarize a current research topic from the enterprise systems domain and put it into the context of related work. They will know to evaluate extant work and how to communicate the insights academically in a written report. Students will also learn and train presentation skills, too.

3.4 AREA MANAGEMENT

Module: ACC/MAN 560 (ACC/MAN 5600) Managerial Accounting - Evaluating Financial and Non-Financial Performance

EN

Contents

An organization's long-term competitive success depends critically on the availability and efficient use of information about its products, services, processes, organizational units, suppliers, customers, and its social and environmental performance. Managerial accounting encompasses the concepts, models, and systems that provide managers with the information needed to achieve both financial and non-financial (ESG) goals. The course will familiarize participants with the terminology and basic concepts of managerial control systems. The topics range from forward-looking tools such as forecasting, planning, and budgeting to the analysis of cost information for decision-making and ex-post performance measurement. The design and use of those internal reporting systems varies substantially across different firms and industries and is closely interlinked with a firm's governance and control systems.

To shed light on these different governance practices, the course integrates a number of real-world cases. Applications cover the manufacturing, the services, and the financial industry.

Learning outcomes

Students will become familiar with advanced issues in managerial accounting and understand the use of financial and non-financial (ESG) information in managerial decision-making. Students will also develop a thorough understanding of management control systems and managerial incentives.

Prerequisites for participation

Necessary: –

Recommended: Bachelor-level knowledge of cost accounting

Forms of teaching and learning	Contact hours	Independent study time

Module: ACC/MAN 561 (ACC/MAN 5610) Managerial Accounting – Case Studies

EN

Contents

An organization's long-term competitive success depends critically on the availability and efficient use of information about its products, services, processes, organizational units, suppliers, customers, and its social and environmental performance. Managerial accounting encompasses the concepts, models, and systems that provide managers with the information needed to achieve both financial and non-financial (ESG) goals.

This course is entirely case-based. You will work on real-world cases that require analysis, written submission, and presentation. The format emphasizes active application: using the tools from ACC/MAN560 to diagnose problems, support decisions, and communicate recommendations. The goal is to build your ability to apply managerial accounting in practice, not just understand it in theory.

Learning outcomes

This course adopts a fully case-based methodology, placing students in the role of decision-makers. Therefore, students will engage directly with realistic business scenarios that mirror the complexity of managerial practice. Each case will enable students to

- Diagnose problems using managerial accounting tools
- Develop evidence-based recommendations
- Communicate and defend the analysis in a structured format

Through case submissions and presentations, students will further build the ability to apply theory under uncertainty and thus acquire a core competency for any managerial role. The hands-on structure is deliberately designed to bridge the gap between the conceptual foundations from ACC/MAN560 and the more complex challenges encountered in real organizations.

Prerequisites for participation

Necessary: ACC 560 Managerial Accounting – Evaluating Financial and Non-Financial Performance (parallel attendance possible)

Module: ACC/MAN 660 (ACC/MAN 6600) Corporate Sustainability Strategies and Value Creation

EN

Contents

The sustainability of a company's business model is an increasingly important driver of firm value and, therefore, an essential input into the strategy process. This course will teach how sustainability goals can be integrated into strategy development and how this integration creates firm value. Topics include the role of regulation, materiality assessment, sustainability targets, the development of specific measures and flagship initiatives, and the interaction with corporate organization and governance. The course also offers an introduction to the link between sustainability strategies and sustainability reporting. Many business cases from different industries will illustrate the real-world impact of the lecture content.

Learning outcomes

Students gain a solid understanding of the relationship between corporate sustainability objectives, corporate strategy, and firm value. They develop an economic intuition for the real-world importance of such an integrated approach to corporate sustainability. They also understand how this relationship further interacts with factors such as a company's regulatory environment, internal target setting, corporate organization and governance. They can relate their knowledge to applied business cases.

Prerequisites for participation

Module: ACC/MAN 661 (ACC/MAN 6610) Corporate Sustainability Performance: Measurement, Assessment and Improvement

EN

Contents

The success of a company's sustainability strategy critically depends on its ability to monitor and evaluate sustainability performance. This course introduces the most important management tools to measure and assess sustainability performance, with a particular focus on decarbonization, waste and circular economy management, and life cycle assessment. Building on these sustainability performance metrics, the course will also focus on how to turn the insights from performance measurement into specific actions, for example, by discussing approaches to reduce carbon emissions and increase the circularity of the business model. Many business cases from different industries will illustrate the real-world impact of the lecture content, including cases study exercises and hands-on usage of leading management tools.

Learning outcomes

Students gain a comprehensive overview over the measurement of corporate sustainability performance and understand how to measure key metrics, especially in the fields of decarbonization, circularity, and life cycle assessment in general, but also specifically for a variety of industrial businesses. They develop an economic intuition for the real-world application of the metrics and become familiar with typical challenges in their implementation. They also understand how to interpret the indicators and are able to link their interpretation to suitable actions that lead to performance improvement.

Prerequisites for participation

Necessary: - (from spring **2027**: ACC 510 or ACC 520 or ACC 530 or ACC 540 or ACC 560 or ACC/MAN 560 or ACC/TAX 570)

Module: ACC/MAN 662 (ACC/MAN 6620) Private Equity: Due Diligence and Value Creation

EN

Contents

The course aims at exploring Private Equity (PE) as an alternative asset class on the rise and will equip the participants with a sound understanding of its characteristics and mechanics.

After outlining Private Equity's role from an asset management perspective, the course will focus on PE fundamentals (strategy, economics, stakeholders) as well as on detailing the Leverage Buy-out value chain including the sourcing strategy, due diligence, portfolio value creation and exit. There will be a specific emphasis on teaching the LBO mechanics, core due diligence techniques and value creation strategies.

The course will be complemented by several practical exercises, in class discussions, as well as guest lectures from professionals in the Private Equity Industry.

Learning outcomes

Participants will be able to distinguish Private Equity from other asset classes. In particular, participants understand how to assess and create value from potential investments. Overall, this course will provide participants with practical insights into Private Equity and will equip them with advanced knowledge for a potential career in the industry.

Prerequisites for participation

Module: ACC/MAN 663 (ACC/MAN 6630) Carbon Removal: Technologies, Markets & Business Impact

EN

Contents

As the world transitions toward net-zero emissions, carbon removal has become a central element of climate strategy and business transformation. This course introduces the technological foundations, market mechanisms, and strategic implications of carbon dioxide removal (CDR) for firms and investors. Students will learn how different removal approaches—from nature-based to engineered solutions—operate, how emerging markets for carbon credits and removals function, and how companies can integrate CDR into their sustainability and investment strategies. Topics include the role of regulation and policy, certification and accounting standards, business model innovation, and financing mechanisms for scaling removal technologies. Real-world cases and guest lectures from industry experts will illustrate how CDR is reshaping value chains, influencing corporate climate commitments, and creating new opportunities and risks for business leaders.

Learning outcomes

Students gain a solid understanding of the technological, economic, and strategic foundations of carbon dioxide removal (CDR) and its role in achieving global net-zero goals. They develop an intuition for how CDR solutions interact with corporate climate strategies, regulatory frameworks, and emerging carbon markets. They also understand how different business models, financing mechanisms, and policy incentives shape the development and scaling of carbon removal technologies. Students are able to critically evaluate CDR initiatives from both a business and sustainability perspective and apply their knowledge to real-world cases involving companies, investors, and policymakers.

Module: ACC/MAN 664 (6640) Value-Based Management and Controlling in Practice: From Strategy to the P&L

EN

Contents

This course examines how companies create and measure value, and how controlling supports management in doing so. Starting from value-based management, growth strategies, and investment decisions, it moves to the operational levers that shape margins: commercial activities, supply chain choices, mix effects, R&D investment under uncertainty, and overhead cost allocation. The final part addresses how controllers plan, forecast, and set targets, and what it means to act as a finance business partner rather than a data provider. Throughout, the course draws on real business situations and decision problems rather than abstract theory. A case study assignment lets students apply these concepts to a specific business decision. Students will present the case study solution in a real-world management setting on the Merck Campus in Darmstadt.

Learning outcomes

Upon successful completion of this course, students

- are able to apply value-based management concepts (e.g., growth and M&A logic, relevant KPIs) to assess whether a strategic or investment decision creates value.

- understand how commercial, supply chain, and product/customer mix decisions drive P&L margins, and can identify and quantify the underlying effects.
- are able to evaluate the impact of R&D investment decisions under outcome uncertainty and of overhead cost allocation methods on reported product or business unit profitability.
- are able to compare different forecasting and target-setting approaches used in financial planning & analysis and judge their suitability for a given situation.
- understand the role of the controller as a finance business partner and can distinguish between presenting data and facilitating decisions.
- are able to structure and analyze a real business case, deriving and justifying a value-based recommendation.

Prerequisites for participation

Necessary: none (from Fall Semester 2027: successful completion of ACC/MAN 560)

Recommended: Bachelor-level knowledge of cost accounting, basic familiarity with controlling concepts

Module: ACC/MAN 665 (6650) Controlling and Finance in Practice: Steering a Global Technology Group

EN

Contents

This course examines how a leading international technology group manages finance and controlling at scale. It starts with the concepts, KPIs, and processes used to steer a diversified international group (i.e., integrated planning, forecasting, performance management, and incentive systems), then turns to how strategy is developed and translated into financial plans and capital allocation. From there, the focus shifts to growth and resilience: investment and R&D controlling, M&A valuation and post-merger integration, and steering under volatile, uncertain conditions. The lecture closes with how digitalization, including predictive forecasting and generative AI, and systematic skill development are reshaping the finance and controlling function. Throughout, concepts are grounded in ZEISS Group's actual processes, tools, and lessons learned.

Learning outcomes

Upon successful completion of this course, students

- are able to describe the key processes and KPIs used to steer a diversified international group (e.g., integrated planning, business performance management, balanced scorecard) and explain how they fit together.

- understand how corporate strategy is developed and translated into financial plans and capital allocation and portfolio decisions.
- are able to apply core valuation methods to assess an M&A transaction and can identify the main challenges of post-merger integration and its controlling.
- understand how companies steer investment, working capital, and R&D efficiency to support growth, and are able to assess a firm's approach to resilience in a volatile and uncertain (VUCA) environment.
- understand how digitalization, especially predictive forecasting and generative AI-based reporting, is changing the finance and controlling function, and can identify the organizational and change-management factors that determine whether analytics implementations succeed.

Prerequisites for participation

Module: FIN/MAN 510 (FIN/MAN 5100) Women in Leadership

EN

Contents

This course takes an interdisciplinary approach to examine the gender gap in leadership positions. We will analyze the psychological and economic reasons for the low fraction of women in leadership. While leadership positions are defined broadly and range from politics to public and private institutions, a special emphasis will be on the academic environment. The course will highlight women's educational and labor market choices, their fertility decisions, and their preferences. We will also examine structural hurdles for women to reach the top, for example stereotypes, discrimination, and social norms. Finally, the effectiveness of gender equality measures – such as quota systems – will be discussed. In addition to the theoretical and empirical fundamentals, the course also comprises two hands-on practical sessions taught by experienced instructors in which students' rhetoric and negotiation skills are trained. The course consists of four core building blocks:

1. Women in Leadership: The Economic Perspective.
2. Women in Leadership: The Psychological Perspective.
3. "Raise Your Voice" – Rhetoric Training
4. "Raise Your Pay" – Negotiation Training

Learning outcomes

Upon successful completion of this course, students will

- know the size, reasons, and time trends of gender gaps in leadership positions with a focus on an academic context
- understand the psychological foundations of these gender gaps
- understand the impact of these gender gaps on economic outcome variables such as women's labor market decisions and the gender pay gap
- have improved their rhetorical skills and be prepared to give professional academic research presentations
- have improved their negotiation skills and be better prepared to take on a leadership position in the future

have practiced presenting their work to a critical, interdisciplinary audience and to discuss other students' presentations in a format closely resembling that of most academic conferences.

Studieninhalte

Zu den Lerninhalten des Moduls zählen neben einem Überblick über die Struktur und Funktion des deutschen Wissenschaftssystems dessen Rechtsgrundlagen und die Art und Weise der Steuerung von Hochschulen und Wissenschaftseinrichtungen. Dabei werden auch Einblicke in den Arbeitsalltag von Hochschulleitungen über Personalführung bis hin zum Förderungs-/Marketingmanagement gegeben. Zum Modulinhalt gehören auch Karriereperspektiven in der Wissenschaft einschließlich der Beschäftigungsverhältnisse, ebenso wie Verknüpfungen des Wissenschaftssystems mit der aktuellen (Welt-)Politik.

Angestrebte Lernergebnisse

Nach Bestehen des Moduls

- ... kennen die Studierenden die spezifischen Bedingungen von Hochschulen und Wissenschaftseinrichtungen sowie die Herausforderungen im politischen Kontext.
- ... haben die Studierenden Managementwissen über wissenschaftsadäquate Führungs-, (Personal-)Entwicklungs- und Service-Aufgaben erworben.
- ... sind die Studierenden qualifiziert, ihr erworbenes Know-how auf wissenschaftsrelevante Managementaufgaben anzuwenden.

Voraussetzungen für die Teilnahme

Notwendige: –

Empfohlen: Interesse an übergreifendem Kenntniserwerb in unterschiedlichen Disziplinen des Wissenschaftsmanagements.

Modul: MAN 522 (MAN 5220) Verantwortung im Management

DE

Studieninhalte

Die Vorlesung geht der Frage der Verantwortung im Management von Unternehmen und anderen Organisationen anhand von konkreten Fallbeispielen sowie Grundlagentexten der ökonomischen und philosophischen Tradition nach. Die Leitfragen der Vorlesung sind: (1) Was ist Verantwortung, und wer ist verantwortlich? (2) In welchem Verhältnis stehen ökonomisches und ethisches Handeln? Lässt sich das eine auf das andere zurückführen? (3) Wie entscheidet man in Verantwortung? Nach welchen Kriterien oder Werten bestimmt und begründet man sein Handeln? (4) Lässt sich Verantwortung institutionalisieren? Wie weit trägt ein Ansatz der „Corporate Responsibility“? (5) Lässt sich Verantwortung an die Maschine delegieren? Welche Fragen stellen sich angesichts der Zunahme von KI in so gut wie allen Unternehmensprozessen?

Angestrebte Lernergebnisse

Nach diesem Kurs sollen die Studierenden in der Lage sein, ihre Verantwortung als zukünftige Führungskräfte oder Mitarbeiter in Unternehmen und anderen Institutionen kritisch zu reflektieren, auf der Basis wesentlicher ökonomischer und philosophischer Positionen und Referenzrahmen ihre Entscheidungen zu begründen sowie Entscheidungen anderer begründet zu analysieren und zu kritisieren. Zudem sollen die Studierenden typische Dilemma-Situationen kennen und analysieren können.

Voraussetzungen für die Teilnahme

Notwendige: –

Empfohlen: Aneignung der philosophischen und ökonomischen Literatur, die in der Vorlesung genannt wird.

Module: MAN 523 (MAN 5230) Designing your future: AI, Family Entrepreneurship & Business Model Innovation

EN

Contents

The course provides a creative learning environment in which students apply parallel thinking and innovation management techniques to explore and design meaningful entrepreneurial pathways as next-generation start-up founders or successors in family enterprises. Students gain a deeper understanding of how social capital is built across digital and physical contexts. They learn how to build trust by sharing stories and by creating content relevant to their future vocation in an empathetic way. Students develop practical skills in communicating, experimenting with, and establishing business model innovations in family firms and entrepreneurial contexts. They learn to combine AI-supported exploration with human judgment when evaluating entrepreneurial opportunities and future pathways. The course includes role-playing elements, conversations, and input from off-campus professionals and industry practitioners, as well as mentoring and coaching sessions to iterate and refine ideas. Students craft a video campaign, a website, a campaign plan, and a business plan using AI-assisted tools as a first step toward turning their entrepreneurial vision into reality. The course was co-developed with and features lessons from co-lecturers of the d.school at Stanford University.

Learning outcomes

AI literacy competencies:

- Development of professional and applied AI skills
- Integrating AI to enhance efficiency in design, innovation and entrepreneurial processes
- Using AI to enhance creative and expressive capabilities in business contexts
- Building confidence in applying AI tools in everyday professional work and larger projects

After the course, students will be able to:

- understand how digital interactions can foster meaningful in-person engagement in a highly connected world.
- discuss the impacts of digitalization and AI on contemporary entrepreneurship and business.- critically evaluate entrepreneurial opportunities and make informed resource allocation decisions based on incomplete information.
- understand the limits and biases of contemporary AI tools.
- (re-)design, experiment with, and iterate their future vocation and business model innovation using classical and AI-assisted tools.
- use classical and AI-assisted tools craft a B-to-C campaign including short videos, a webpage, and a campaign and business plan.
- use presentation, AI, and video-making tools to communicate and visualize a desirable future.

Modul: MAN 531 (MAN 5310) Aktuelle Themen aus dem Wissenschaftsmanagement

DE

Studieninhalte

Zu den Lerninhalten des Moduls zählen neben aktuellen hochschulpolitischen Entwicklungen ein vertiefter Einblick in die Beschäftigungsverhältnisse des wissenschaftlichen Personals an Hochschulen einschließlich der bestehenden Aufgaben, Rechte und Pflichten sowie der Besoldungs-/Vergütungssystematik. Zum Modulinhalt gehören auch die Beschäftigung mit einigen ausgewählten Gerichtsverfahren im Hochschulbereich und ein Einblick in die Fördermöglichkeiten (Forschungsförderung etc.) im Wissenschaftssystem.

Angestrebte Lernergebnisse

Nach Bestehen des Moduls

- kennen die Studierenden die spezifischen Voraussetzungen und Besonderheiten von Beschäftigungsverhältnissen an Hochschulen
- haben die Studierenden Managementwissen über Förderbedingungen im Wissenschaftssystem erworben und können rechtliche Problematiken einordnen.
- sind die Studierenden qualifiziert, ihr erworbenes Wissen auf wissenschaftsrelevante Managementaufgaben anzuwenden

Modul: MAN 532 (MAN 5320) Eigentum – Grundlage der modernen Wirtschafts- und Gesellschaftsordnung

DE

Studieninhalte

Die bürgerliche Gesellschaft ist ohne den Eigentumsbegriff nicht denkbar. Die Möglichkeit, Eigentum zu erwerben und zu veräußern bildet die Grundlage des Unternehmertums, aber auch der individuellen Freiheit. Darin waren sich Theoretiker von Karl Marx bis Milton Friedman einig. Seit dem Beginn des bürgerlichen Eigentums herrscht aber Uneinigkeit über die Möglichkeit seiner Begründung (Wie mehrt man eigentlich Eigentum? Arbeit vs. Verzinsung) und seiner Dauerhaftigkeit (Grundeigentum besteht ewig, geistiges Eigentum hat ein Verfallsdatum). Diese Fragen werden durch die Fortschritte bei der Entwicklung der künstlichen Intelligenz, bei der durch große Portfolien begünstigten Risiko-Optimierung von Kapitalallokation und durch die in weiten Teilen als Allmende verstandene Biosphäre immer relevanter. Das Seminar zielt darauf ab, klassische Eigentumstheorien zu verstehen und auf aktuelle Probleme anzuwenden.

Angestrebte Lernergebnisse

Nach Bestehen des Moduls...

- ... haben Studierende die das Wissen erworben, wie sich der Eigentumsbegriff historisch entwickelt und ausdifferenziert hat
- ... verstehen Studierende die Bedeutung von Eigentum und Eigentumsordnungen für die moderne Wirtschafts- und Gesellschaftsordnung
- ... sind Studierende in der Lage, verschiedene Formen von Eigentum (z.B.: Grundeigentum, Sacheigentum, geistiges Eigentum, Finanzigentum) zu unterscheiden und ihre Effekte auf wirtschaftliche Tätigkeit zu analysieren.

Voraussetzungen für die Teilnahme

Module: MAN 605 (MAN 6050) Mastering Complexity in Organizations – How to navigate through the complexity of our times

EN

Contents

Complexity is the main challenge of management in the 21st century. Only those organizations that know how to use complexity and rapid change intelligently to create and defend competitive advantages will thrive in the long run.

This course equips students with the theories, concepts and tools to be successful in the age of fast change and multiple options. It is a comprehensive introduction into the world of systems, cybernetics, and artificial intelligence. Students will learn about the basic concepts of complex adaptive systems like variety, connectedness, emergence, and self-organization. They will understand how cybernetics, the science of communication and control, can help them to design adaptive and resilient organizational structures that scale. They will discover how the human brain copes with complexity and how computers and artificial intelligence can improve individual and group decision-making processes in complex environments.

This course provides both theoretical foundations and practical applications, endowing students with the skills to effectively navigate and manage complexity in a variety of contexts.

Learning outcomes

By the end of this course, students will be able to:

1. Understand the theoretical foundations of complexity.
2. Analyze the impact of complexity on organizations.
3. Diagnose and design effective organizational structures.
4. Learn how to debias individual and group decision-making processes.
5. Assess the role of AI in mastering complexity.
6. Collaborate effectively in groups to solve real-world cases.
7. Develop critical thinking and problem-solving skills.
8. Communicate findings and recommendations effectively through group deliverables and a final report.

Prerequisites for participation

Module: MAN 607 (MAN 6070) Managing the Family Business – Strategy, Governance, and Change

EN

Contents

The course **MAN 607 “Managing the Family Business – Strategy, Governance, and Change”** is a joint project between the University of Mannheim and NHH in Bergen, Norway. It follows a hybrid format in which lectures are held in person at both universities and shared online across locations.

The course aims to highlight the significance of family firms in both research and practical applications, emphasizing their unique contributions to the business landscape. Students will explore the specific characteristics that differentiate family firms from non-family businesses, such as governance structures and decision-making processes, while also becoming aware of the diverse forms these enterprises can take. The course will introduce relevant theories from family firm research and demonstrate their practical applications, equipping students with the knowledge needed to navigate this sector effectively embedded in an international context. The curriculum features guest lectures from industry experts and case presentations for practical insights. This hybrid format combines in-person and online teaching, promoting collaboration among students from the EN-GAGE.EU network between Mannheim, Bergen and Sofia while fostering academic and intercultural development.

Learning outcomes

Upon successful completion of the module, students will be able to:

1. Critically evaluate governance structures in family versus non-family firms using established frameworks.
2. Assess the complexities of succession planning in family businesses and its impact on long-term sustainability.
3. Formulate strategic approaches for value creation in family firms by harnessing distinctive family assets, while addressing challenges in innovation and internationalization.
4. Diagnose common crises in family businesses and devise preventive measures alongside effective response strategies.
5. Work collaboratively to analyze case studies and recommend tailored solutions for the unique challenges faced by family enterprises.

Prerequisites for participation

Necessary: –

Recommended: A foundational knowledge of management principles, corporate governance, and business strategy, along with experience in case study analysis or group collaboration, is recommended for this course.

Forms of teaching and learning	Contact hours	Independent study time
Lecture	4 SWS	13 SWS
ECTS credits	6	
Graded	yes	
Workload	180h	
Language	English	
Preliminary course work	–	
Form of assessment	There are three formal criteria that must be fulfilled in order to pass the course: - Participation & attendance (pass or fail) - Group presentation (graded, 50% of overall grade) - Written exam (60 min, graded, 50% of overall grade) The first criterion, “Participation & Attendance,” must be fulfilled to at least 80% in order to be admitted to the exam and the final presentation. This means that you are required to attend all three theoretical lectures prior to the final presentations. Absence from a lecture may only be excused with a medical certificate or in important, exceptional cases, which must be communicated to the lecturer in advance.	
Restricted admission	yes

Module: MAN 608 (MAN 6080) Business, Society, and the Environment

EN

Contents

We are the wealthiest and healthiest generation in the history of the planet. Unfortunately, we could also be the last generation that enjoys this level of health and wealth. Capitalism is in many ways responsible for much of our wealth and longevity, but it also underlines the ecological crisis that we are experiencing.

While many may regard environmental sustainability as aimed at conservation of nature, it is in reality paramount for the survival of humanity as a species, and ultimately too for the survival of business.

How should business react to the impending ecological crisis that we face? What does sustainable and regenerative businesses look like? What role does business play in shaping an eco-friendlier future. This module investigates what people and businesses can do to co-create a better world.

Learning outcomes

Upon successful completion of this course, students

- ...are able to describe the impact of business on the environment;
- ...understand the role of policy in governing human and business behaviours;
- ...describe, contrast and recommend different policy instruments for specific environmental issues;
- ...contrast the exposure of different industries to environmental impacts, and vice versa (contrast the impact of different industries on the ecological environment);
- ...contrast, apply and recommend sustainability strategies based on the profile of a case company or industry.

Module: MAN 609 (MAN 6090) Strategic Management between Profit and Purpose - Insights from Hybrid Organisations

EN

Contents

A core challenge in today's society is how to balance corporations' for-profit goals with purpose driven societal and environmental objectives.

In this pursuit, this seminar explores the intersection of corporate and nonprofit management through the lens of hybrid organizing. Hybrid organizations are increasingly prevalent in today's complex and interconnected world and are argued to exist in the for-profit as well as in the nonprofit and the public sector. They combine profit-driven and mission-oriented approaches (incl. societal and environmental responsibilities).

In this seminar, students will explore the complexities of blending such logics, and will gain insights into the challenges and opportunities of hybrid organizing in diverse sectors. Through the examination of scientific papers, students will acquire a solid understanding of the fundamental features and principles of hybrid organizations. Participants will also gain insights into how hybrid organizing has evolved as a research field. In addition to the scientific perspective, the course will cover real-world examples of hybrid organizations and critically discuss their impact and potential challenges.

Learning outcomes

Upon successful completion of this course, students are able to...

- define and explain the concept of hybrid organizing in the context of corporate and nonprofit management.
- formulate strategic insights into the management of hybrid organizations, considering the unique challenges and opportunities they present.
- discuss and critically assess the ethical dimensions of hybrid organizing, considering the impact on various stakeholders.
- critically evaluate scientific papers on the topic of hybrid organizing and beyond, assess the field's research agenda, and identify research gaps in this field.

In an era of rapid technological advancements, shifting customer preferences, evolving market dynamics, and geopolitical uncertainties, maintaining competitive advantage and fostering growth is increasingly challenging. Navigating this complex global business landscape requires an entrepreneurial mindset—defined by proactivity, uncertainty tolerance, and innovation. This mindset is not just essential for startup founders but also for leaders striving to drive success within established organizations during turbulent times. Entrepreneurial behavior, primarily guided by effectuation principles to navigate uncertainty, fundamentally differs from the causation-based approach commonly found in traditional corporate settings designed to manage risk. This course equips students with both theoretical foundations and practical tools essential for entrepreneurial success. Participants will learn to identify opportunities, generate innovative ideas, and navigate the process of launching and financing new ventures. By working in teams to develop and present their own business ideas, students will gain hands-on experience and valuable skills. Additionally, the course offers insights into recent global and local trends shaping entrepreneurship today, ensuring participants are well-prepared to adapt and thrive in the evolving business environment.

Learning outcomes

This course offers a comprehensive exploration of entrepreneurship, combining theoretical foundations with practical skills and tools. Students will gain valuable insights into the entrepreneurial ecosystem in Germany and examine contemporary global trends shaping the field.

Through hands-on activities, they will identify opportunities, develop viable business models, and refine their pitching skills to attract various forms of investment. By the end of this course, students will be equipped to launch their own ventures or drive innovation within existing organizations as intrapreneurs. The course is designed for those eager to innovate, whether by establishing their own venture or enhancing the competitive edge of established firms. Students who attend this course will:

- Grasp the fundamental concepts and frameworks of entrepreneurship
- Gain a deep understanding of Germany's entrepreneurial environment, including key players, opportunities, and challenges
- Engage in discussions about recent global developments and emerging topics in entrepreneurship
- Use proven methods and tools to generate, evaluate, and refine innovative business ideas
- Design and iterate robust business models that identify and exploit lucrative market niches
- Understand the key criteria for an effective pitch and develop the skills to present compelling business proposals in competitive environments
- Prepare and deliver a pitch for their own business model, receiving constructive feedback to refine their approach

The course will be a markedly international in nature with participants joining from the international partner universities as it is **part of the MBS Summer School**. The course is scheduled as a one-week block course in mid-July.

Prerequisites for participation

Necessary: not taken MAN 634

Recommended: A basic understanding of business foundations is helpful.

Module: MAN 630 (MAN 6300) Introduction to Entrepreneurship

EN

Contents

University of Mannheim alumni founders, such as Lea-Sophie Cramer (Amorelie), David Handlos and Florian Barth (Stocard), Alexander Rittweger (Payback) and Rupprecht Rittweger (e-shelter), are examples of successful entrepreneurs who have pursued new business opportunities in a way which is innovative, path-breaking and contributing to growth and employment generation.

But who is a typical entrepreneur? How well does the typical startup perform? Is there such a thing as the typical entrepreneur or the typical startup? Why do people start businesses? Is every young business a startup? What characteristics do entrepreneurs have? How do entrepreneurs finance their start-up? What is the role of networks for launching and running new businesses? These are some of the questions that we will discuss in MAN 630 Introduction to Entrepreneurship. We will discuss in lecture settings and have 3 to 4 additional case study sessions in which student teams will present their solutions and advice to startup challenges. Theories presented will be combined with real-life cases. Additionally, guest speakers (i.e., entrepreneurs and/or academics) may come to class to shed light on specific topics of interest or how they have overcome challenges.

Beware of the following upsides and downsides: The course is tons of fun and highly rewarding but challenging and demanding in terms of its self-study elements and the case study team efforts. If your expectation is a class with lectures to randomly attend, this might not be your first choice.

What you can expect from us is a fun and rewarding atmosphere in class paired with optional Founder Talks and Startup Lounges (evening events) throughout the semester to get in touch with lots of role models, business models and a fair chance to develop your networks. Overall, you can expect a perfect introduction to central theories in entrepreneurship and the Startup Ecosystem at and around the University of Mannheim and beyond.

Side note on choosing MAN 630 vs. alternatives:

You should choose MAN 630 if you...

- are interested in combining insights from lectures with readings at home and with insights gained from speakers in Startup Lounges, Founder Talks and in class to maximize your learning
- are interested in startups and entrepreneurship in general and want to gain a top-level view on both entrepreneurship in theory and practice.
- like the practical world but do not want to lose sight of the underlying academic foundations.
- love aiming for the big picture and love discussing topics of interest from a variety of angles.
- do not like courses based on keywords and phrases to learn but on concepts to put into perspective and forming your own sophisticated line of argumentation.

You should, however, not choose MAN 630 if you...

- expect this to be a multiple-choice-style course of memorizing material and then jotting buzzwords down on the exam. Our interactive style of teaching and a wealth of readings will get you frustrated – focus is set on understanding concepts rather than memorizing them.
- expect teaching staff to tell you what to learn and what to forget – this is up to you (see point above).
- want to develop or advance your own startup project in class. Apply for MCEI course MAN 631.

Learning outcomes

By the end of this course, students will have gained fundamental perspectives in theoretical and practical entrepreneurial mechanisms. They will gain experience with case studies.

Module: MAN 632 (MAN 6320) Advanced Entrepreneurship

EN

Contents

Successful entrepreneurs pursue new business opportunities in a pioneering way. They significantly contribute to innovation, growth and employment generation. Meet top entrepreneurs who share their experience and insights in MAN 632 and explore their entrepreneurial challenges in real-life case studies.

The course takes a four-pronged approach:

- We bring distinguished entrepreneurs to class who share their insights, lessons learned and advice on how to build and grow a business from a Business-to-Consumer (B2C), Business-to-Business (B2B) and Corporate Entrepreneurship (CE) perspective.
- We work on real-life case studies with newly developed and most recent Mannheim Business School Cases. You will prepare your results and suggestions, present in Case Study Sessions and deepen your insights by discussing and reflecting your insights with the founders coming to class.
- We develop tools and concepts based on an underlying strategic perspective to grow the venture. We will address and connect the four focus areas of 1) Team, Culture and Communication, 2) Growth-Oriented Marketing and Strategy, 3) Financing Growth and Exit 4) Corporate Entrepreneurship & Corporate Venturing.

The blend of unique practical insights from top entrepreneurs, discussing concepts on how to advance the business with them, and theoretical insights and tools, will enable you with outstanding skills and a great network.

This will support you in advancing your own venture and/or your corporate career in the future. Next to the practical insights and tools, you will also gain fundamental insights into theoretical perspectives on entrepreneurship to prepare your master's thesis and/or future research career.

Learning outcomes

By the end of this course students

- will have gained fundamental insights into both practical and theoretical perspectives on entrepreneurship
- have learned best practices and gained deep insights from top entrepreneurs
- will have built a solid entrepreneurial network to advance their own business and careers
- have gained knowledge on how investors look at new ventures
- will be acquainted with case study training and elements of problem-based learning (PBL)
- will have improved their case solving and presentation skills
- have a solid foundation e.g. for a seminar or master thesis at our chair – especially for the "Inside the Venture" theses
- have improved their problem solving capabilities

If you want to develop or advance your own startup project in class: Apply for our course MAN 631 next semester.

Module: MAN 634 (MAN 6340) Entrepreneurial Behavior and Crowdfunding Social Ventures

EN

Contents

This practical course familiarizes students with concepts of entrepreneurial action and sustainable opportunity creation. Students learn key elements of crowdfunding, especially crowd interaction and digital communication, to foster sustainable entrepreneurship via creative ideas. In workshop-like sessions, students are encouraged to develop their own business models and crowdfunding campaign for a social idea focusing on goals such as gender equality, poverty reduction, stronger institutions, and quality education. The course is flanked via impulses of experts from practice.

Learning outcomes

Students are capable to

- gain advanced insights in venturing,
- work in groups to create a social business model with economic viability,
- understand social and psychological dynamics underlying crowdfunding success,
- craft high quality multimedia content for a crowdfunding campaign,
- pitch their business model in front of an expert jury.

The study of employment relations involves examining the dynamic between employees and their employers, a key aspect of HR responsibilities. The course "Employment Relations" equips students with a robust foundation in the various facets of employment relations, covering processes, contextual understanding, and real-world applications. It also imparts the necessary skills for a successful career in HR.

This course will cover a wide spectrum, ranging from the legal dimensions of employment relations, essential policies, and evolving societal influences to conflict resolution, mediation, fostering employee engagement, and maintaining workplace discipline. The lecture syllabus will include the following topics:

The concepts and processes of employment relations The context of employment relations Employment relations strategies, policies, and change Employee engagement Managing employment relations Employee representation Managing workplace conflict Managing workplace discipline Managing employee grievances Managing redundancy Legal frameworks – comparative employment relations The role of mediation in conflict resolution

Exercise sessions will aim to reinforce the students' knowledge with respect to selected topics through case studies, group assignments, practical group exercises and plenary discussions.

Learning outcomes

Upon completion of this course, students will be able to:

- knowledgeably discuss key concepts and processes of employment relations
- demonstrate an understanding of
 - the context in which employment relations exist
 - the actors involved in employment relations and the interests they pursue
 - key strategic consideration of employment relations and how they impact policy and change processes
 - key considerations in securing employee engagement

key aspects of managing employment relations including the handling of workplace conflict, workplace discipline, employee grievances, redundancy, and mediation

Module: MAN 639 (MAN 6390) TRANSFORM - Innovation & Entrepreneurship for Sustainability

EN

no offering in spring 2027

Contents

TRANSFORM is a collaborative 4EU+ course on innovation and (social) entrepreneurship for sustainable development. It will be offered by a team of lecturers across the Universities of **Heidelberg, Warsaw, Sorbonne, Copenhagen, and Mannheim**. The course will introduce the concepts of: open and frugal innovation, strategic thinking for social problem solving, scaling sustainable solutions, and measuring societal impact. TRANSFORM offers students a unique opportunity for intercultural exchange, critical thinking and pro-active learning.

The course consists of four modules (innovation, strategy, scaling, and impact). Throughout the semester students will team up in groups across universities to create service, product or process innovations that address a sustainability challenge (**course project**). After an introduction of the key concepts, students analyze and examine how these concepts can be applied to their course projects. Therefore, the course does not only provide a strong theoretical foundation, but also allows students to gain valuable insights into the concrete application of concepts through a hands-on and practical approach. Lecturers from the participating universities conduct classes in their respective areas of expertise and jointly mentor student teams.

The course builds on the previously established "Accelerating Investment Readiness" MOOC (**#AirMOOC**, see https://youtu.be/yPUVuh_uFgg), but extends its contents significantly. It takes place online with students from all universities. The sessions alternate between content and application, allowing students to work on their projects regularly. At the end of the semester students present their results and write an assignment.

The best student outputs will be featured on the public **online platform** the team of lecturers will build for the contents to be used by other university educators globally. The platform will also provide all contents to students.

Learning outcomes

Praxis-oriented:

- Participants will gain a thorough understanding of how to create, manage and grow an impact-oriented organization, how to measure its impact and develop and maintain an impact orientation.
- A high practitioner orientation is ensured in particular through including contents from MOOCs, case studies and other material.
- Participants will learn about currently much discussed phenomena of impact orientation and sustainability. They will get insights from current research projects on the phenomenon.

Theoretical and conceptual:

- Participants will develop thorough knowledge of theoretical and conceptual ideas related to sustainable organizations (e.g. frugal innovation, sustainable business models, scaling and diffusion, impact measurement) and their role in society.
- They will be able to navigate in a „fuzzy“ field of sustainability (rather than focusing on selected clear-cut definitions).
- Strengthen ability to analyse and critically discuss topics around sustainable entrepreneurship

Prerequisites for participation

Necessary: –

Recommended: Students are interested in the key topics of the course: (social, frugal) innovation, sustainable business models and strategy, scaling and diffusion, impact measurement and management

Module: MAN 644 (MAN 6440) Human Resource Training and Development

EN

Contents

In this course, we will focus on Training and Development as a key discipline within the field of Human Resource Management. Starting with strategic considerations related to Training and Development, this course will take you through the various aspects of training and development design, as well as the training and development methods. The lecture will cover the following topics:

- Strategic Training and Development
- Training and Development Needs Assessment
- Learning and Knowledge Transfer
- Training and Development Program Design
- Training and Development Evaluation
- Traditional Training Methods
- Technology-based Training Methods
- Employee Development and Career Management

During the exercise sessions, various topics that will have been covered in the lecture will be further elaborated through case studies, group assignments, practical group exercises and plenary discussions.

Learning outcomes

Upon completion of this course, students will be able to:

- perform a training and development needs assessment,
- knowledgeably discuss key concepts of learning and knowledge transfer,
- design a training and development program,
- evaluate the impact of training and development measures,
- identify and apply key characteristics of traditional training methods,
- and identify and apply key characteristics of traditional technology-based training methods.

Module: MAN 645 (MAN 6450) Leadership and Motivation

EN

Contents

This course is designed to introduce students to different perspectives on leadership and the role that motivation plays in the leadership process. It provides students with a comprehensive understanding of leadership theories (e.g., trait, skills, style, and situational approaches) and discusses contemporary challenges of leadership in organizations (e.g., culture and leadership, women in leadership positions, ethical leadership). Furthermore, the course gives students the opportunity to experience their own leadership behavior and thereby help to prepare them for leadership roles in organizations.

Learning outcomes

By the end of the module students will be able to:

- understand different approaches to leading and motivating employees,
- analyze different leadership styles and evaluate their advantages and disadvantages,
- assess factors of successful leadership,
- understand potential problems in the interaction between supervisors and subordinates,
- and learn about their own leadership style.

Program-specific Competency Goals	CG 1	

Contents

This course looks at the link between human resource (HR) practices and firm performance. Knowledge and other intangible assets have been shown to provide a source of competitive advantage, but their effects on firm performance are often difficult to quantify. What is the economic value of job performance? How can organizations gain from trainings or improved personnel selection? What are the costs of employee absenteeism and turnover? HR professionals are confronted with such questions, but often lack the necessary skills to find satisfying answers in existing firm data.

The course first introduces analytical approaches to HR measurement and discusses its implementation in an organization's HR architecture. Second, it aims at providing knowledge on existing empirical evidence regarding the impact of HR practices on firm outcomes.

By combining both approaches, the course offers ways to improve decision quality in HR management and demonstrate how HR practices can add value at the level of the firm.

Learning outcomes

By the end of the module students will be able to:

- understand how HR practices can influence firm performance,
- develop a framework of HR measures and integrate it into a firm's HR architecture,
- design means to evaluate HR initiatives, and
- empirically analyze firm data to estimate the financial impact of HR practices.

Module: MAN 647 (MAN 6470) Strategic and International Human Resource Management

EN

Contents

This course is intended to expand students' knowledge on basic human resource management (HRM) processes and instruments by adding an international and a strategic dimension. In the first part of the module (international dimension), we examine the impact of national context on HRM and discuss basic HRM functions in international organizations. Topics include international recruiting and selection, training and development, compensation, and employee relations.

In the second part of the module (strategic dimension), we focus on the dynamics of HRM systems. Various approaches of how singular HRM practices conceptually and empirically form bundles are considered. We review how HRM practices can be aligned with respect to other HR practices (horizontal fit) as well as organizations' objectives (vertical fit) to form HRM systems that help improve organizations' performance.

Learning outcomes

By the end of the module, students will be able to:

- understand the impact of culture and national context on HRM,
- analyze differences in international HRM systems,
- design basic HRM practices in international organizations,
- align HRM practices with regards to their horizontal and vertical fit,
- comprehend the processes translating HRM systems into organization's performance, and
- consider contextual factors' impact on the alignment of HRM systems.

Module: MAN 648 (MAN 6480) Incentives and Performance

EN

Contents

In this course, we study performance management and analyze the link between incentives and individual's performance in organizations. Based on the performance management process, the course covers performance measurement and monitoring, key performance management tools, and implementation of performance management systems targeted at employees in organizations. Furthermore, the course investigates the role of incentives in organizations, both theoretically and empirically from a psychological and economic perspective.

Learning outcomes

By the end of the module, students:

- will be able to select and implement appropriate performance measures,
- are familiar with formal performance appraisals,
- understand the link between pay and performance,
- are able to analyze the effectiveness of incentives both theoretically and empirically, and
- are able to design performance management systems.

Module: MAN 649 (MAN 6490) Human Resource Recruitment and Selection

EN

Contents

In this course, we will be focusing on two important aspects of human resource management: recruitment and staff selection. Starting with the job analysis as a point of departure, this course will take you through the various stages of the recruitment and selection process up to the point where a candidate is selected for a specific job. The lectures are set to take place during the first half of the semester and will cover the following topics:

- Determination of job requirements
- Function and structure of a job description
- Determination and evaluation (weighting) of selection criteria
- Identification of suitable recruitment channels
- Methods for attracting potential applicants – as well as their advantages and disadvantages (e.g. Internet, recruitment agencies, headhunters, press advertising, social networks)
- Methods for assessing applicants – as well as their advantages and disadvantages (including application forms interviews, work sampling, psychometric instruments)
- Development of a criteria methodology matrix

- Quality management of recruitment and personnel selection
- During the exercise sessions, which are scheduled for the second half of the semester, topics covered during the lectures will be further elaborated through case studies, group assignments, practical group exercises and plenary discussions.

Learning outcomes

Upon completion of this course, students will be able to:

- perform job analyses and develop job descriptions,
- derive selection criteria from job analyses,
- assess recruitment methods according to their benefits and drawbacks,
- assess selection methods according to their benefits and drawbacks,
- develop complex selection plans (criteria-methodology-matrix),
- and identify and apply quality requirements for recruitment and personnel selection.

Contents

This course exposes students to a broad range of strategic and financial restructuring techniques (e.g., equity carveouts, spin-offs, leveraged buyouts) that can be applied to improve business performance. We will engage in an analysis of the rationale underlying specific corporate restructuring transactions, the process of executing these transactions, and their effects on the welfare of managers, stockholders and other corporate stakeholders. Current business cases and guest speakers representing the different parties involved in corporate restructuring (e.g., investment bankers, consultants, business unit managers, employees) will help illustrate how various corporate restructuring approaches may be applied in business practice to increase firm value.

Learning outcomes

Students will

- acquire and demonstrate expert knowledge in the specific subject area of corporate restructuring.
- be able to apply and critically reflect upon contemporary theories, models and tools utilized in restructuring research and practice
- be able to identify key issues, derive appropriate solutions when analyzing business cases, and have a good understanding of their impact on restructuring success.
- be able to design and deliver professional and effective oral presentations of their business case analyses.

Module: MAN 655 (MAN 6550) Corporate Strategy

EN

Contents

In this course, we will critically reflect upon the role of corporate centers of multinational companies (MNCs). A particular emphasis will be placed on the challenges faced by corporate centers and their opportunities for value creation in their quest to turn a conglomerate discount into a conglomerate premium.

Learning outcomes

Students will acquire and demonstrate expert knowledge in the specific subject area of corporate strategy (i.e. about the challenges and value creation opportunities faced by corporate centers of MNCs).

Students will be able to apply and critically reflect upon contemporary theories, models and tools utilized in strategy research and practice (i.e. the repertoire of analytical tools applied by corporate centers to fulfill their “parenting” role).

When analyzing fictitious or real-life business cases, students will be able to identify key issues, derive appropriate solutions, and have good understanding of their impact on strategic decision outcomes.

Contents

For decades, mergers and acquisitions (M&A) have continued to be the primary vehicle for reshaping firms' business portfolios. Both the rationales and economic outcomes of mergers and acquisitions, however, have remained a source of controversy in both academic research and business practice. The purpose of this course is to unpack which of the "received wisdoms" on mergers and acquisitions really hold up to rigorous scrutiny and which ones do not. To serve this purpose, we will systematically review the key determinants of acquisitions, and discuss the economic outcomes of acquisitions coupled with the key contingencies influencing acquisition outcomes. Moreover, we will discuss and practice some of the key tools for analyzing and implementing acquisitions.

Learning outcomes

CG 1, CG 2

Module: MAN 659 (MAN 6590) Understanding and Tackling Societal Challenges through Management Research

EN

Contents

"Grand challenges" are formulations of global problems that can be plausibly addressed through coordinated and collaborative effort. In this seminar, we discuss management research that examines societal problems that individuals, organizations, communities, and nations face around the world. Based on research publications in top management journals we will cover topics such as: "the interplay between nonprofits, institutional actors and the community", "health care's grand challenges"; "climate change"; "water supply"; "corporate volunteering for societal causes". Besides, methodological issues when studying grand challenges will be discussed.

Learning outcomes

Upon successful completion of this course, students

- ... are able to point out who or what is impacted by ethical issues.
- ...are able to evaluate academic literature based on profound research skills.
- ...are able to summarize academic literature

Module: MAN 665 (MAN 6650) Sustainability Management Simulation: Net Zero

EN

no offering in fall 2026/2027

Contents

The module is designed for students who want to gain deeper understanding of emission reduction strategies and sustainable management of companies. Students will experience the challenges and opportunities related to reducing corporate greenhouse gas emissions while at the same time managing overall business performance. This will include the actions that can be taken to reduce emissions, and the impact that such actions can have on the financial performance of a company.

Learning outcomes

Students will be able to apply their theoretical and conceptual knowledge of sustainability management in a hands-on application exercise. Upon successful completion of the course, students will understand drivers of greenhouse gas emissions, actions to reduce emissions and their impact on financial performance.

Moreover, students will have acquired knowledge of *how cutting greenhouse gas emissions can help companies to reduce costs and increase revenues and are able to evaluate corporate emission reduction efforts*. The course focuses on the computer simulation *Sustainability Management Simulation: Net Zero*.

Prerequisites for participation

Necessary: –

Recommended: Bachelor-level knowledge of management and strong interest in application of sustainability management.

Module: MAN 669 (MAN 6690) Technology Ventures - From Invention to Innovation

EN

Contents

This course is offered as part of the Global Innovation Challenge (see further information)

Recent research suggests that technological invention – the generation of technology-based ideas – has slowed over the past half century. At the same time, our societies need to further increase the rate of technological innovation, i.e. the economic and societal application of technology-based ideas, to remain competitive and resilient. The bridge between invention and innovation is most often a technology venture. Both academics and practitioners argue that there is much room for improvement in bridging the gap between technological invention and innovation. Given the slowdown in invention, increasing the likelihood of successful bridges to innovation has arguably become more important than ever. This course discusses the available evidence on „how“ to better build such bridges.

The venturing process, also known as technology start-ups or entrepreneurship, is surrounded by many myths: Entrepreneurs are born, not made; technology-based ideas require STEM (Science-Technology-Engineering-Mathematics) teams to succeed; and the venture must be based in Silicon Valley. Many of these ideas are not just myths but can be shown by evidence-based research to be wrong, potentially leading to poor decisions by scientists, entrepreneurs, businesses and policy makers. At a macro level, this is problematic for the progress of our societies.

At the micro level, this fragile bridge between invention and innovation is problematic because labor market statistics in many leading economies indicate that up to one in three people will be entrepreneurs during their working lives, and many more will work for a start-up or young company at some point.

Students will learn about the different stages of a technology venture and will be exposed to recent research in competitive strategy, financial economics, innovation, organizational theory, science of science and sociology on how to think more systematically about the evaluation of ideas, scaling and eventual exit of a technology venture. As aspects of the venturing process clearly benefit from practical experience, the course will invite industry and policy experts to enrich the practical exercises and classroom discussions.

Learning outcomes

While the course is based on rigorous theory and empirical evidence, it also has a very practical focus: how can technology ventures improve their chances of success?

Students will gain a deeper understanding of technology ventures and the practical steps involved. By the end of the course, students will be able to answer questions such as

- Identify what makes an attractive technology-based venture idea
- Identify characteristics of successful ventures, founders and start-up teams
- Understand strategies for overcoming challenges in attracting resources, such as financial and human capital
- Analyze business case materials and how to make decisions based on this information
- Analyze the role of technology ventures in our economy and their wider societal applications

The learning will be useful for students who are interested in eventually (co)founding or working for (technology) ventures, who wish to conduct research in entrepreneurship and related fields, and students who will pursue careers that require an educated interaction with ventures, including investment banking, private equity, consulting, start-ups, STEM faculty, and positions in the life sciences and technology industries.

The course will have a strong international flavor with approximately 20–35 participants joining from the international partner network “GIC”. The course is planned as a two-week block course in late June/early July.

Prerequisites for participation

Necessary: –

Recommended: Master-level courses on innovation, strategy, and organization theory. Basic knowledge of finance and economics is also helpful but not necessary.

Module: MAN 675 (MAN 6750) Ausgewählte Herausforderungen im Nonprofit Management – Fundraising

EN

Contents

In diesem Seminar werden aktuellen Entwicklungen im Bereich des Fundraisings von Nonprofit Organisationen diskutiert und kritisch hinterfragt. Ein breites Spektrum an Themen wird behandelt, darunter individuelle Funding Motive, Online- und Offline-Finanzierungsmechanismen, Venture Philanthropy, Stiftungsaktivitäten sowie die übergeordnete Rolle von Ethik im Fundraising. Dies geschieht durch die Bearbeitung wissenschaftlicher Texte, praxisnaher Fallstudien sowie von Kurzprojekten.

Learning outcomes

Die Studierenden sollen nach Abschluss des Moduls in der Lage sein:

- die Rahmenbedingungen sowie die theoretischen Grundlagen des Nonprofit-Managements im Hinblick auf Fundraising zu erläutern,
- Managementherausforderungen im Kontext von Fundraising kritisch zu diskutieren,
- wissenschaftliche Fachartikel kritisch zu analysieren.

Des Weiteren sollen Schlüsselqualifikationen wie Präsentationskompetenz, Arbeiten mit wissenschaftlichen Texten und Teamkompetenz erworben werden.

Modul: MAN 676 (MAN 6760) Ausgewählte Herausforderungen im Public Management

DE

kein Angebot im FSS 2027

Studieninhalte

Jedes Semester wird ein Schwerpunktthema aus dem Bereich Public Management ausgewählt und diskutiert. Dies geschieht durch die Bearbeitung von wissenschaftlicher Literatur, die Lösung von praxisnahen Fallstudien, oder die Erarbeitung von Kurzprojekten. Den Syllabus für das aktuelle Semester finden Sie auf der Website des Lehrstuhls.

Angestrebte Lernergebnisse

Nach diesem Kurs sollen die Studierenden in der Lage sein: Rahmenbedingungen und theoretische Grundlagen des Public Management bezüglich des Schwerpunktthemas zu erklären, Management-Herausforderungen im gewählten Schwerpunktthema kritisch zu diskutieren und wissenschaftliche Artikel kritisch zu lesen. Des Weiteren sollen Schlüsselqualifikationen wie Präsentationskompetenz, Arbeiten mit wissenschaftlichen Texten und Teamkompetenz erworben werden.

Modul: MAN 679 (MAN 6790) Eine wissenschaftliche Einführung in das Public und Nonprofit Management

DE

Studieninhalte

Das Modul stellt eine wissenschaftliche Einführung in das Management von öffentlichen und Nonprofit-Organisationen dar. Dabei erfolgt zunächst eine Beschreibung und Analyse des öffentlichen und des Nonprofit-Sektors. Im Anschluss wird auf Besonderheiten und Herausforderungen im Management von öffentlichen und Nonprofit-Organisationen in Bezug auf verschiedene Managementfunktionen (z. B. Governance, Personalmanagement, Marketing, etc.) eingegangen. Damit bietet das Modul einen theoretischen Bezugsrahmen für das Management von öffentlichen und Nonprofit-Organisationen. Gleichzeitig werden die Besonderheiten im Vergleich zum Management privat-erwerbswirtschaftlicher Unternehmen herausgestellt. Die Erarbeitung der Inhalte erfolgt anhand der aktuellen wissenschaftlichen Literatur im Bereich Public und Nonprofit Management. Dabei erfolgt auch eine Diskussion der methodologischen Vorgehensweisen in der Forschung im Public- und Nonprofit-Kontext.

Angestrebte Lernergebnisse

Die Studierenden sollen nach Abschluss des Moduls in der Lage sein, die Relevanz des öffentlichen und des Nonprofit-Sektors einzuschätzen, die Besonderheiten des Managements von öffentlichen und Nonprofit-Organisationen zu erläutern, wissenschaftliche Literatur aus den Bereichen Public und Nonprofit Management zu verstehen und kritisch zu beurteilen und Thesen und Erkenntnisse in den Bereichen Public und Nonprofit Management zu diskutieren. Des Weiteren sollen Schlüsselqualifikationen wie Arbeiten mit wissenschaftlichen Texten und Teamkompetenz erworben werden.

Module: MAN 680 (MAN 6800) Challenges of Public and Nonprofit Management – Case Study Seminar

EN

Contents

World-wide public and nonprofit organizations make an important contribution to society. Facing increasing economization and globalization, organizations in both sectors need to adapt. Combined with the public and nonprofit-specific organizational purpose, these tendencies pose particular challenges to public and nonprofit management. By analyzing and discussing case studies, as well as engaging with scientific literature, students will develop an understanding for these challenges and how public and non-profit organizations address them.

Learning outcomes

By the end of the module students will be able to explain the particularities of public and nonprofit management, apply general management methods in the public and nonprofit sector, evaluate the development of specific concepts for public and nonprofit organizations, discuss hypotheses and findings in the field of public and nonprofit management, and critically analyze scientific papers. Moreover, key competences such as presentation competence, working with academic papers and team competences shall be acquired. Additionally, they will learn to critically engage with and discuss their own and their peers' work.

Prerequisites for participation

Contents

The lecture “Innovation Management” provides an overview of theoretical foundations and fundamental conceptions in the field of innovation management. The lecture further analyzes innovative activity at the industry as well as at the firm level. In particular, determinants that affect the development and the spread of innovations will be scrutinized. At the industry level, special emphasis will be put on the prediction of market development and future trends. At the firm level, the development of innovation strategies and alternative implementations of innovation processes will be covered. Core topics are, for instance, a business venture’s incentive systems, organizational structures that are supposed to foster innovative activity, collaboration in innovation processes, commercialization strategies, and the design of internal interfaces between different departments.

Learning outcomes

The aim of the lectures on innovation management is to provide the students with central concepts from the area of innovation management and findings from theoretical and empirical research into innovation. Students should also learn to apply findings from theoretical and empirical research into innovation in order to analyze and to solve innovation management-related problems. In particular, they should develop the core competences needed to manage innovation from its early stages to the introduction of products or services in the market and the strategic positioning of the firm within its industry.

Module: MAN 691 (MAN 6910) Selected Topics in Organizational Behavior

EN

Contents

Organizational behavior is defined as the systematic study and application of knowledge about how individuals and groups act within the organizations where they work. The lecture presents essential theories and concepts explaining how individual and group behavior shape the internal dynamics of organizations. The course deals with factors that facilitate or hinder effective behavior. Topics include communication, motivation, individual skills, abilities, and emotions, group dynamics, leadership, power, organizational culture and organizational design.

Learning outcomes

This course helps students develop a conceptual understanding of organizational behavior to analyze, understand, and manage human behavior in organizations to improve organizational efficiency and effectiveness.

Module: MAN 693 (MAN 6930) Strategic Intellectual Property Management

EN

Contents

Strategic Intellectual Property (IP) Management is becoming ever more important. IP management does not simply mean filing and maintaining different forms of intellectual property (patents, trademarks, copyright, or trade secrets) or concluding licensing deals. IP has to be integrated with overall business model design and corporate strategy. This course offers a broad introduction to the types and integrated use of IP. Economic rationales for the increasing contribution of IP rights will be analyzed. Furthermore, it relates IP to current trends in Innovation and Strategic Management like Open Innovation and the development of markets for IP and technology.

Learning outcomes

This course helps students develop an understanding of different types of IP rights, enables them to evaluate business situations involving IP rights, and to work up appropriate IP strategies for organizations of different sizes (startups, SMEs, MNEs) or active in different industries.

Module: MAN 699 (MAN 6990) Advanced Topics in Digital Transformation

EN

Contents

Technologies fundamentally change the way companies operate, the way we work and the way we think. Digital transformation is essential for organizations and individuals alike, as it not only revolutionizes operational efficiency and competitiveness but also necessitates continuous learning and adaptability. This case study course illustrates the unique benefits and challenges associated with digital transformation from different angles using practical examples. Topics include change management, future of work, innovating in the digital era, artificial intelligence, and data analytics.

Learning outcomes

By the end of this course, students will be able to:

- Understand the fundamental concepts of digital transformation and change.
- Analyze the impact of new working modes on organizations and the workforce.
- Explore new forms of innovating in the digital age.
- Assess the role of AI and data analytics in driving digital transformation.
- Collaborate effectively in groups to solve real-world digital transformation challenges.
- Develop critical thinking and problem-solving skills.
- Communicate findings and recommendations effectively through group deliverables and a final report.

Modul: MAN 710 (MAN 7100) Forschungsseminar Public & Nonprofit Management

DE

EN

Contents

Im Rahmen des Forschungsseminars werden die bislang erlernten Grundlagen des Public & Nonprofit Management aus einer akademischen, forschungsorientierten Perspektive vertieft. Die Studierenden werden in aktuelle Themen der Public & Nonprofit-Forschung eingeführt und erlernen wissenschaftliches Arbeiten. Die konkrete inhaltliche Ausgestaltung des Seminars kann verschiedene Formen annehmen.

Learning outcomes

Die Studierenden sollen nach Abschluss des Moduls in der Lage sein:

- Forschungslücken zu erkennen und im Hinblick auf eigene Forschungsarbeiten zu reflektieren,
- Forschungsziele und Forschungsfragen zu formulieren,
- wissenschaftliche Literatur zu recherchieren, interpretieren, beurteilen und selektieren,

- geeignete Forschungsmethoden (qualitativ und/oder quantitativ) für verschiedene Forschungsfragen auszuwählen,
- eine qualitative und/oder quantitative Forschungsarbeit zu verfassen.

In diesem Seminar sollen insbesondere die Schlüsselqualifikation des wissenschaftlichen Arbeitens erworben werden.

Prerequisites for participation

Necessary: Um das Forschungsseminar MAN 710 besuchen zu können, muss eines der 600er Module des Lehrstuhls (MAN 609, MAN 659, MAN 675, MAN 676, MAN 679, MAN 680) erfolgreich besucht worden sein. Dies kann nicht parallel zum Forschungsseminar erfolgen.

EN

Contents

The seminar deals with current topics in the field of strategic organization and innovation research. Participation in the seminar will enable students to independently explore a research topic in a written paper. Students will get acquainted with basic literature research techniques and will learn how to organize and structure their research.

Learning outcomes

Students learn how to conduct high quality research in the areas of Organization & Innovation, they will independently write a paper about a topic in Organization & Innovation. Successful seminar attendance qualifies the students to write their master thesis at the Chair of Organization and Innovation.

Prerequisites for participation

Module: MAN 750 (MAN 7500) Seminar Corporate Strategy & Governance

EN

Contents

The research seminar aims at advancing students' expertise in corporate strategy and governance research. By critically reviewing the extant body of research and conducting complementary analysis, students are meant to distil scientifically grounded insights on topics of both theoretical and practical relevance and to derive fruitful avenues for future research.

Learning outcomes

The students are supposed to acquire and demonstrate expert knowledge about the evolution of and current state-of-the-art in relevant substreams of corporate strategy and governance research.

Against the backdrop of this knowledge, students will be able to critically reflect upon contemporary theories, models and research approaches applied in corporate strategy and governance research. Students will be able to develop and deliver effective presentations on their conceptual and empirical work.

Prerequisites for participation

Necessary: MAN 654 (**no** parallel attendance possible) or MAN 655 (**no** parallel attendance possible) or MAN 656 (**no** parallel attendance possible)

Contents

The aim of this seminar is to prepare students for writing an empirical master-thesis in family business & entrepreneurship research. The content of this seminar allows students to get an overview regarding current research questions in the area of empirical family business research and entrepreneurship and to work in-depth on one the topics of this research realm. The content focus within the area of empirical family business research and entrepreneurship research may take varying forms depending on the semester – see the syllabus for the focus of the current semester. Regarding methods the students will be familiarized with the fundamental econometric methods which area applied in the area of empirical family business & entrepreneurship research.

Learning outcomes

The students will to apply statistical software (STATA) and will be familiarized to work with the empirical research databases such as Worldscope, Datastream, CRSP, WRDS, Amadeus or Compustat. Moreover, the course teaches the students to understand and apply methods in line with the current state of research and provides access to current research topics in the area of empirical family business and entrepreneurship research.

Prerequisites for participation

Necessary: –

Recommended: It is helpful for participants to have visited the lecture CC 502. No previous knowledge on quantitative empirical methods is required.

Module: MAN 771 (MAN 7710) Seminar on Corporate Decarbonization

EN

Contents

This seminar examines and discusses the challenges and opportunities that companies face on their pathway towards net carbon emissions of zero. Such pathways hinge on the economic analysis of reducing corporate carbon emissions and the formulation of abatement strategies. Particular topics covered in this seminar include:

- Climate-Tech Innovation
- Corporate Decarbonization Strategies
- Competitiveness of Clean Energy Technologies
- Emergence of Sustainable Transportation Services
- Pathways for Industrial Decarbonization

The analysis of these topics involves a review of the most current literature as well as the use of analytical and empirical research methods. As part of the seminar, participants will present and discuss the key findings of their analysis and write up their findings and conclusions in the form of a seminar paper.

Learning outcomes

Participants will get a better understanding of the main challenges and opportunities associated with the transition towards a decarbonized energy economy. They will also learn both theoretical economic concepts central to this transition as well as recent practical developments and tools. In addition, the participants will improve their skill in writing a coherent state-of-the-art seminar paper.

Prerequisites for participation

Necessary: –

Recommended: (i) basic knowledge of econometrics and statistical methods, (ii) basic knowledge in economics, management, finance, or accounting, and (iii) active interest in the topics of climate change, climatetech and decarbonization.

3.5 AREA MARKETING AND SALES

Module: MKT 510 (MKT 5100) Price and Product Management

EN

Contents

This module deals with two important components of the marketing mix: price and product management. With regard to price management, the fundamentals of pricing decisions, as well as classic pricing theory and behavioral pricing, will be discussed. Furthermore, a focus of the lecture will be on determining optimal prices and on price implementation.

The part on product management is concerned with all decisions related to the current and future product portfolio and includes all stages of the product life cycle with a special focus on innovation management and the management of products already established in the market. Finally, the module covers fundamental models of product choice and major aspects of brand management.

Learning outcomes

At the end of this module, students will understand the relevance of pricing and product decisions and become familiar with important instruments/tools of price and product management. They will especially know and understand the fundamentals of pricing decisions, which are rooted in microeconomics and psychological theory, and they will be able to derive detailed recommendations for action regarding all areas of product decisions. In addition, the students will be able to apply analytical tools used to make pricing and product decisions.

Module: MKT 511 (MKT 5110) Data, Analytics and AI for Marketing Strategy

EN

Contents

This course provides an advanced understanding of how data, analytics, and artificial intelligence can be leveraged to design and optimize marketing strategies. It focuses on the transformation of marketing decision-making in data-rich environments, moving from intuition-driven approaches to evidence-based and algorithm-supported strategies.

Students will learn how to structure marketing decision problems, integrate and evaluate data sources, and apply analytical models to key strategic areas such as customer segmentation, customer lifetime value (CLV), acquisition and retention, marketing mix allocation, pricing, and revenue optimization. The course also introduces modern machine learning approaches and AI-driven decision systems, including reinforcement learning and generative AI applications in marketing.

The course combines conceptual foundations with quantitative tools and practical applications. Through case studies, tutorials, and hands-on exercises, students will develop the ability to translate analytical insights into actionable marketing decisions. Special emphasis is placed on causal inference, economic decision criteria, and the strategic implications of AI-enabled marketing. As part of this course, you are also required to independently work through several online videos as self-study.

Learning outcomes

Upon successful completion of this course, students:

- are able to structure and formalize marketing decision problems in data-rich environments, integrating strategic objectives, constraints, and performance metrics.
- understand the role of data, analytics, and AI in marketing decision-making, including the distinction between predictive and causal approaches.
- are able to apply key analytical frameworks and models (e.g., segmentation, CLV, marketing mix models, pricing and demand models) to derive optimal marketing strategies.
- are able to evaluate marketing actions based on economic criteria such as profit, ROI, and customer lifetime value.
- have acquired the ability to design data-driven customer and market strategies, including targeting, acquisition, retention, cross-selling, and pricing decisions.
- understand the opportunities and limitations of machine learning and AI in marketing, including issues of model evaluation, interpretability, and governance.
- are able to translate analytical results into actionable managerial recommendations and communicate them effectively.
- have developed hands-on experience with analytical tools and methods used in modern marketing analytics and AI-supported decision-making.

CG 1, CG 4

Contents

This module gives an overview of the market research process and deals with methods for data analysis and interpretation. The emphasis is on multivariate methods of data analysis. In presenting those analytical methods, a special focus is on discussing strengths and weaknesses of different methods and on possible fields of application in market research projects. Moreover, the application of different methods by means of common statistical software packages will be demonstrated.

Learning outcomes

Participants gain a sound knowledge of how market research projects are conducted and are able to critically evaluate market research projects. Especially, students will have an understanding of the data analysis methods used in market research and how these are applied by means of statistical software. The students are familiar with the strengths and weaknesses of the presented methods and know their fields of application within market research projects.

Module: MKT 531 (MKT 5310) Marketing Theory: Consumer Behavior and Decision Making

EN

no offering in spring 2027

Contents

Marketing begins and ends with the consumer – from understanding consumer preferences and needs to providing consumer satisfaction. Thus, a clear understanding of consumers is critical in successfully managing the marketing function in any organization. This module examines the nature of consumer behavior and consumer decision process. The effects of psychological influences (such as learning, motives, perception, and beliefs and attitudes) on consumer behavior and decision-making are discussed. Understanding consumers' behavior and the irrationality of the human decision-making process is key to developing winning marketing strategies for advertising, branding, pricing or promotions.

Learning outcomes

Students develop an understanding of important theories in marketing and its relevance within business administration. More precisely, they will be able to critically discuss and apply models and theories of consumer behavior, such as prospect theory and mental accounting.

They will further know about the foundations of social psychology, including feeling-as-information theory, attachment theory, attribution theory of motivation, and cognitive dissonance theory. Based on these foundations, they will be able to reflect on consumer perception as well as on concepts of consumer learning, memory, motivation, and attitudes, which altogether imply on consumer decision processes. In addition to their knowledge on marketing theory, they will be able to assess various frameworks and tools in this regard, e.g., marketing mix strategies and market analysis as well as segmentation.

Module: MKT 545 (MKT 5450) Customers, Markets and Firm Strategy

EN

Contents

This module provides new and articulate strategy concepts, analytical frameworks, and hands-on tools for students to execute industry analyses and develop competitive strategies. Building on consumer behavior, customer analytics, industry analyses and strategy foundations, it helps to analyze the competitive behavior of firms (including pricing, market positioning, product development, expansion, entry and deterrence) under various economic conditions of industry structure.

Learning outcomes

By the end of the module students are able to execute industry analyses and develop competitive strategies. In particular, students will have a deep understanding of identifying customers' preferences, needs and willingness-to-pay.

Taking this understanding of consumer into account, students are able to analyze the principles and foundations of business strategies from the interrelationship of product demand, market environments and firms' characteristics. Moreover, students are capable of executing industry analyses, uncovering durable economic principles that are applicable to different strategic situations. That means, course participants gain a profound understanding of how firms compete and organize themselves and how firms have to make good strategic marketing decisions.

Module: MKT 575 (MKT 5750) Marketing Strategy for Innovation & Sustainability

EN

Contents

The world's most valuable companies succeed because they make innovation a fundamental part of their business strategy. While the marketing strategy sets the direction for the future, the innovative power within the company ensures that new products and services are developed, new processes are designed, and new business models are created. The global economic system is straining available resources, and consumers are becoming increasingly aware of the importance of sustainable business practices. To account for these market dynamics, marketing strategy and innovation have a vital and unique role to play in creating a more sustainable society, as most of consumers' material needs are met through marketing systems. Sustainable innovation and marketing strategies then involve the process of creating, communicating, and delivering value to customers in a way that preserves or enhances both environment and human capital in the process of value creation and delivery.

Learning outcomes

For participants seeking knowledge in marketing strategy and innovation, this course explores the complex challenges organizations face in bringing sustainable innovative ideas to market successfully. How does a business interact with sustainability issues from an innovation strategy perspective? Which marketing strategy and marketing program should be employed to ensure rapid customer adoption and successful go-to-market? What are the most effective consumer insights and methods to support sustainable innovation endeavors? These questions will be addressed in a two-day course combining theoretical insights, case study exercises, and a collaborative design thinking exercise.

At the completion of this course, students should be able to:

- identify challenges for sustainable innovation, especially recognizing current consumption trends, and identifying barriers to and benefits of sustainable consumer behavior,
- evaluate the role sustainable innovations play for companies,
- assess strategies for creating, communicating, and delivering value for a sustainability focused brand by identifying consumer segments and values relevant to sustainability issues and understanding consumer responses to sustainable products and practices, and
- apply design thinking as a methodology for understanding customer needs and creating innovative sustainability solutions.

Contents

Businesses worldwide have been facing a fundamental change in the ways in which customers and companies interact with each other. Customers are more socially connected than ever, they expect more from companies and brands, and information reaches them faster than ever before. At the same time, companies develop digital business models. One apparent development is the rise of platform business models. Thus, the rise of digital technologies has fundamentally changed the way companies craft marketing strategies and how marketing creates, communicates, and delivers value to customers. The overarching goal of this course is to establish a perspective on the digital marketing strategies companies can employ to occupy a sustainable position in the age of social, digital, and mobile for both pipeline and platform businesses.

Learning outcomes

The course will equip students with the relevant knowledge, perspectives, and practical skills required to develop marketing strategies that leverage the opportunities offered by digital technologies for achieving business and marketing goals. The emphasis of this course is on understanding what various digital platforms and tools offer to companies, how to build digital marketing strategies in order to have a solid foundation from which to evaluate opportunities in the digital economy.

Module: MKT 612 (MKT 6120) Business-to-Business-Marketing

EN

Contents

In many industries (e.g. consumer goods, retail, metalworking industry) an essential part of transactions is done between companies and organizational clients (also companies or public sector institutions). This lecture deals with the central characteristics of business-to-business markets and their consequences for marketing.

Learning outcomes

Students understand the characteristics of organizational buying behaviour and the peculiarities of the Marketing Mix in the B2B context. Also, students are aware of different types of business and their implications for marketing. At the end of the course, students are able to apply and adapt marketing strategy, concepts and instruments to business-to-business environments.

Module: MKT 614 (MKT 6140) Marketing Communication

EN

no offering in the academic year 2026/2027

Contents

This module is designed to introduce students into the field of marketing communications and communication management. The emphasis will be on the role of advertising and other promotional mix elements in the integrated marketing communications program of an organization. Attention will be given to the various marketing communication tools used in contemporary marketing including advertising, direct marketing, the Internet and social media. Moreover, the process by which integrated marketing communications programs are planned, developed and executed as well as the various factors and considerations that influence this process are examined.

Learning outcomes

Students are able to develop a marketing communications program, which requires an understanding of the overall marketing process, customer behavior, communications theory, and how to set goals, objectives and budgets.

Contents

The module deals with the primary sales tasks of customers' acquisition and retention as well as sales objectives and necessary sales instruments from an instrumental and strategic perspective. Accordingly, the lecture covers five central areas of sales management. First, the foundations and objectives of sales management are discussed, and the concept of sales strategy and its core elements are introduced. Second, the key sales instruments essential for achieving sales objectives are discussed. Third, the fundamentals of sales channel design are presented, followed by a discussion of the management of external sales partners. The final chapter covers the fundamentals of managing the internal sales force.

Learning outcomes

Upon successful completion of this course, students can understand the foundations and objectives of sales management and apply the key sales instruments necessary for the achievement of sales objectives. They are aware of the importance of efficient management of external sales partners and internal sales force. At the end of this module, students are able to apply the acquired knowledge about sales strategy, concepts, and key sales instruments in practice.

Module: MKT 619 (MKT 6190) Customer (Lifecycle) Management

EN

Contents

This course provides an in-depth understanding of customer lifecycle management, covering the processes of acquiring, developing, retaining, and reactivating customers. It focuses on how firms can manage customer relationships strategically across different lifecycle stages to maximize customer lifetime value. Students will explore key concepts such as customer journey mapping, segmentation, personalization, CRM systems, and data-driven decision-making. The course combines conceptual foundations with practical applications, including case studies and tools used in modern customer management. Special emphasis is placed on digital channels, automation, and AI-driven customer engagement.

Learning outcomes

Upon successful completion of this course, students:

- are able to analyze and design customer lifecycle strategies across acquisition, retention, and development phases.
- understand the role of customer data, analytics, and CRM systems in managing customer relationships effectively.
- are able to evaluate and optimize customer journeys and touchpoints using relevant frameworks and metrics (e.g., CLV, churn, conversion rates).

have acquired the ability to apply customer-centric thinking to real-world business problems and develop actionable recommendations.

Prerequisites for participation

Necessary: –

Recommended: Bachelor-level knowledge of marketing and/or customer management; familiarity with fundamental concepts in data analysis is helpful.

Module: MKT 622 (MKT 6220) Country Manager

EN

Contents

The module is designed for students who expect to undertake international marketing assignments, work for global corporations or help smaller companies to expand globally. The course portrays opportunities and competitive challenges in regional market settings and pays special attention to the issue of standardization versus adaptation of marketing programs.

Learning outcomes

Students will be able to apply their theoretical and conceptual knowledge of marketing strategy and international marketing in a hands-on application exercise. Students can sharpen their strategy formulation skills and learn about market dynamics. Students will experience the challenges pertaining to international marketing by playing the role of a category manager for a major consumer products company. The course focuses on the computer simulation Country Manager.

Module: MKT 623 (MKT 6230) Strategic Marketing Management Simulation

EN

Contents

The module is designed for students who expect to undertake assignments within the context of strategic marketing management. This module is concerned with the development, evaluation, and implementation of marketing management elements in a strategic setting. The module deals primarily with an analysis of concepts, theories, techniques, and models in marketing. Basis for the module is a computer simulation in the context of strategic marketing decisions of a leading manufacturer of over-the-counter cold medicine.

Learning outcomes

Students will be able to apply their theoretical and conceptual knowledge of marketing management in a hands-on application exercise. Students can hone their understanding within the following four categories:

- Situation Analysis
- STP – Segmentation, targeting and positioning
- Marketing mix (4Ps – product, price, promotion, place)
- Integrated marketing decision-making and analysis

Module: MKT 625 (MKT 6250) Artificial Intelligence in Business: A Case Study

EN

Contents

The course Business AI for Marketing and Sales introduces students to the strategic application of artificial intelligence in modern business environments. The course is entirely case-based and conducted in close collaboration with partner companies. Depending on the specific challenges and objectives of the partner, the case study may extend beyond marketing and sales to cover the entire value chain.

Students work in teams on a real-world business case, exploring how digital transformation and AI-driven technologies can create value and support innovation across the organization. The course emphasizes the practical design, development, and evaluation of AI-based solutions in a real business context.

Important: This course does not include classical lectures or frontal teaching. Instead, students work independently and in groups on the assigned case.

Learning outcomes

Upon successful completion of this course, students will be able to:

- Understand and critically assess the role of AI across marketing, sales, and broader business processes.
- Analyze and design digital customer journeys and business processes using innovative tools and platforms.
- Apply AI-driven techniques such as predictive analytics and personalization in real-world business contexts.
- Collaborate effectively in teams to solve complex, real-world business problems through digital and AI-based innovation strategies.
- Communicate and present structured, actionable solutions to industry partners.

Prerequisites for participation

Necessary: –

Recommended: Basic knowledge of marketing concepts and digital technologies is helpful. Prior experience with data analysis or artificial intelligence is not required. Students should be comfortable working independently, collaboratively, and in a highly practice-oriented, case-driven learning environment.

Contents

The course examines the key aspects of consumer behavior. It defines consumer behavior as the acquisition, consumption, and disposition of goods, services, time, and ideas by (human) decision-making units. Based on this definition, important implications for retailing are explored. Starting from the Elaboration Likelihood Model, we distinguish between the central and peripheral routes of information processing and discuss topics such as decision-making and store choice (both high and low involvement).

Learning outcomes

Students understand the key aspects of consumer behavior with specific application to marketing communication and retailing. They will be able to apply and adapt their knowledge to develop strategies and tactics for both areas.

Prerequisites for participation

Module: MKT 663 (MKT 6630) Branding and Brand Management

EN

no offering in spring 2027

Contents

Although brand names represent one of the most valuable (intangible) assets for a firm, creating and nurturing a strong brand poses considerable challenges. Branding is therefore a critical management task that has both strategic and tactical elements. The concept of brand equity can provide managers with a valuable perspective and a common denominator to interpret the potential effects and trade-offs of various strategies and tactics for their brands. Brand management involves the design and implementation of marketing programs and activities to build, measure, and manage brand equity.

The aim of this module is to introduce students to proven techniques and frameworks for assessing and formulating branding strategies and tactics that improve the long-term profitability of brand names.

This course revolves around understanding how to develop effective branding strategies, while keeping in mind economic and psychological factors of branding.

Learning outcomes

Students are able to understand and discuss the importance of branding, brand equity and brand strategies within marketing.

Contents

Das Seminar ist eine Vorbereitung auf die Erstellung einer Masterarbeit innerhalb der Marketing-Area und bietet eine Einführung in wissenschaftliches Arbeiten mit Bezug auf neue Entwicklungen der Marketingforschung. Die Studierenden erstellen eigenständig eine schriftliche Seminararbeit zu einem aktuellen Forschungsthema und präsentieren ihre Ergebnisse im Rahmen des Seminars.

Learning outcomes

Die Studierenden können wissenschaftlich arbeiten und selbstständig ein Forschungsthema aus dem Bereich Marketing untersuchen. Sie kennen grundlegende Techniken der Literaturrecherche und wissen, wie wissenschaftliche Arbeiten zu strukturieren sind. Weiterhin lernen die Studierenden, ihre Forschungsergebnisse zu präsentieren.

Prerequisites for participation

Necessary: Um sich für das Seminar zu bewerben, müssen bereits mindestens zwei Marketing-Kurse auf Masterniveau (MKT 5XX oder MKT 6XX) erfolgreich abgeschlossen worden sein.

Recommended: –

Contents

Das Marketingseminar dient dazu, den Teilnehmern die Prinzipien des wissenschaftlichen Arbeitens zu vermitteln. Diese Fähigkeiten werden von Studierenden durch die Anfertigung einer Seminararbeit erschlossen und in den Seminarveranstaltungen vertieft. Sie versetzen die Studierenden – in Verbindung mit dem im Marketing-Studium erworbenen Wissen – in die Lage, eine Master-Arbeit innerhalb der Marketing-Area anfertigen zu können, welche den Ansprüchen an eine akademische Abschlussarbeit genügt. Die Studierenden erstellen eine schriftliche Seminararbeit zu einem aktuellen Forschungsthema. Die Arbeit wird im Rahmen des Seminars präsentiert und mit anderen Teilnehmern diskutiert.

Learning outcomes

Die Teilnahme befähigt Studierende, ein wissenschaftliches Thema umfassend zu erschließen. Studierende werden in die Lage versetzt, Forschungslücken zu identifizieren und Forschungsfragen zu formulieren, ihr Thema zu motivieren und zu positionieren, einen konzeptionell-theoretischen Rahmen für die Arbeit zu entwickeln, die zentralen Konstrukte zu konzeptualisieren und zu operationalisieren, einen Review aktueller empirischer Studien zu erstellen und theoretische und Managementimplikationen abzuleiten. Sie werden außerdem mit Präsentationstechniken vertraut gemacht.

Prerequisites for participation

Necessary: Um sich für das Seminar zu bewerben, müssen bereits mindestens zwei Marketing-Kurse auf Masterniveau (MKT 5XX oder MKT 6XX) erfolgreich abgeschlossen worden sein.

3.6 AREA OPERATIONS MANAGEMENT

Contents

Supply Chain Management deals with all activities aimed at satisfying customer demand. This includes managing the flow and storage of goods along the supply chain, to ensure that products are available in the right place at the right time. As such, supply chain management plays a crucial role in the delivery of customer service and thereby in the creation of business value. This course addresses key decisions regarding the design of a company's supply chain activities. Particular attention will be paid to the design of distribution networks as a core element of a firm's infrastructure. Other topics include capacity management and transportation planning. The course takes an analytics-oriented approach and introduces quantitative models that link managerial levers to supply chain performance. It thereby highlights relevant trade-offs and reveals how managers can strike an optimal balance.

Learning outcomes

This course makes students aware of the role of supply chain management in managing cost and customer service. It helps students understand how to align supply chain decisions with an underlying business strategy. Students will be familiarized with fundamental supply chain planning tasks. They will also get to know relevant analytical tools and concepts. The course enables students to analyze supply chain management decisions using quantitative techniques and to make the right trade-offs between different performance criteria.

Prerequisites for participation

Necessary: –

Recommended: Basic knowledge in operations management (e.g. BSc course "OPM 301 Operations Management"), basic knowledge in mathematics (including Linear Programming) and in statistics (probability distributions).

Program-specific Competency Goals	CG 1

Contents

Inventory management is a core element of any company's supply chain management activities. Yet, deciding on the right amount of inventory, in a given setting, is a challenging task. For many companies, inventory ties up a huge amount of capital. To set appropriate inventory levels, companies must trade off inventory costs and benefits. While inventory costs tend to be readily visible, measuring inventory benefits is more demanding, in general. Business analytics tools and techniques are of great value to master these challenges. This course introduces such approaches. It structures the analysis by distinguishing different inventory drivers. For each driver, it first highlights the underlying economic trade-offs and then introduces and analyses quantitative models that allow to optimize them. Core topics include demand forecasting, lot sizing, safety stocks, and seasonal inventory. The course also addresses the interplay between the sales and operations functions of a firm.

Learning outcomes

In this course, students will learn how inventory can be used to manage supply chain performance. They will be able to distinguish different inventory roles in different supply chain environments. Students will become acquainted with relevant business analytics techniques and will understand how to apply them to address inventory management tasks. In conclusion, the course enables students to analyze inventory systems quantitatively and to determine the right inventory levels to achieve given performance objectives. Students will also gain insights into the interdependencies between the sales and operations functions of a firm.

Prerequisites for participation

Module: OPM 505 (OPM 5050) The Supply Chain Strategy Process – A Practical Approach

EN

Contents

This module provides a practice-oriented perspective on the development and implementation of supply chain strategies, drawing extensively on the experience of a senior supply chain manager. It offers students direct insights into how supply chain strategy is shaped, discussed, and executed in real-world corporate environments.

The course begins with an overview of global trends and challenges and discusses how these factors influence corporate decision-making. It then examines the relationship between corporate strategy and supply chain strategy, illustrating how supply chains contribute to competitive advantage in practice.

Building on this foundation, the module provides a structured deep dive into the key elements of supply chain strategy. These include defining vision, mission, and performance targets, as well as making strategic choices in core areas such as service design, inventory and supply structures, strategic procurement, and logistics networks. Additional sessions address supporting and cross-functional elements, including governance, management systems, and planning processes. Throughout these sessions, the instructor integrates real-life examples, practical frameworks, and lessons learned from industry experience.

The module also covers the challenges of strategy implementation, including organizational alignment, change management, and capability development.

Particular emphasis is placed on translating strategic intent into actionable decisions and managing trade-offs in complex, real-world settings. The course concludes with an integrated recap and an interactive career dialogue, offering insights into roles and career paths in supply chain management and consulting.

Learning outcomes

Upon successful completion of this module, students will:

- understand how global trends and business realities shape supply chain strategies,
- be able to explain the role of supply chain strategy within the broader corporate context,
- develop a structured understanding of how supply chain strategies are formulated and implemented in practice,
- be familiar with key strategic design elements, including service, inventory, sourcing, logistics, and planning,
- be able to analyze and evaluate real-world supply chain strategies and derive actionable implications,
- understand typical challenges in strategy implementation and how they are addressed in practice,
- gain practical insights into roles and career paths in supply chain management.

Module: OPM 506 (OPM 5060) Data and Decision Management in Supply Chains

EN

Contents

This module provides a practice-oriented introduction to data and decision management in supply chains, drawing on the experience of two senior supply chain experts. It focuses on how data is structured, managed, and leveraged to support decision-making and execution in modern supply chain organizations.

The course begins with an introduction to the role of data and decision management in supply chains and establishes the foundations of data modelling. It then explores how IT systems enable decision-making processes, with particular emphasis on enterprise systems and the distinction between master and transactional data.

Building on this foundation, the module examines data structures and models used in supply chain planning, highlighting how data supports key processes such as forecasting, inventory planning, and network decisions. Students are introduced to supply chain analytics, including key performance indicators (KPIs) and end-to-end data analysis approaches used in practice. The course further addresses how data-driven decisions are translated into operational execution, emphasizing the integration between planning and execution systems. Advanced topics include the role of artificial intelligence, world models, and machine learning-based forecasting in improving decision quality and automation.

In addition, the module covers data management processes, governance structures, and organizational aspects required to ensure data quality and consistency.

It also discusses how companies derive business value from data and how data capabilities contribute to competitive advantage. The course concludes with a discussion of data management and an outlook on future developments in data and decision management, including emerging technologies and evolving roles in supply chain organizations. Throughout the module, real-world examples, project experiences, and practical frameworks from consulting practice are used to illustrate concepts and challenges.

Learning outcomes

Upon successful completion of this module, students will:

- understand the fundamentals of data modelling and decision-making,
- understand how IT systems support decision-making in supply chains,
- be familiar with supply chain data models, including ERP and planning data structures,
- understand the role of analytics in supply chain decision-making and execution,
- gain an introduction to AI, world models, and machine learning applications in supply chains,
- understand key data management processes, the business value of data, and future developments in data and decision management.

Module: OPM 510 (OPM 5100) Sustainable Operations Management

EN

Contents

Sustainability refers to the long-term viability of businesses from a financial, environmental, and social perspective. In recent years, firms are facing growing regulatory and societal pressure to become more sustainable and to take responsibility for the environmental and social impact of their activities. This poses challenges for traditional business models and practices. Powerful levers to manage sustainability reside in the origins of a firm's value creation, in their operations and supply chains. This module – jointly offered by all chairs of the Area Operations Management – provides a broad analysis of sustainability from the operations and supply chain perspective, and illustrates the potential of operations management to strategically contribute to the economic, environmental, and social performance of firms. Topics include sustainable product and service design, lean and green operations, closed-loop supply chains, and sustainability in procurement. The course targets both, (i) students focusing on operations management and intending to learn how sustainability affects a company's operations and (ii) students with a general interest in sustainability that seek to understand the role of operations management in steering the sustainability of companies and supply chains.

Learning outcomes

The main intended learning outcome is a sound understanding of how to tackle sustainability goals in the economic reality of matching supply and demand. Participants will learn how to effectively lessen the negative environmental and social impacts of firms while maintaining their competitiveness. Special emphasis is put on analytical approaches and practical insights that illustrate concepts and challenges. Furthermore, students will intensify their understanding of operations and sustainability topics by putting concepts and analytical tools into a broader, interdisciplinary, and strategic context.

Prerequisites for participation

Necessary: –

Recommended: Basic knowledge in operations management (e.g. BSc course "OPM 301 Operations Management"), mathematics, and statistics.

Module: OPM 560 (OPM 5600) Operations Analytics with Python

EN

Contents

Business analytics helps to optimize decisions for the design and management of operations systems and production processes. This course introduces into the programming language Python. Based on OPM 561, selected concepts and methods from prescriptive and predictive analytics are implemented and numerically assessed. They will be applied to support decisions in capacity management and operations planning.

We apply descriptive analytics to quantify and visualize all three dimensions of variability, as introduced in OPM 561. For predictive analytics, we introduce data sampling and perform sensitivity analysis to understand the impact of stochastic variability. For prescriptive analytics, linear and mixed integer optimization models are implemented and solved numerically. During the course, the students will work on several case studies and assignments (individual and in groups).

Learning outcomes

Students will learn

- basics in Programming with Python.
- how to numerically analyze capacity planning and operations scheduling problems.
- how to use Python to implement and solve models from predictive and descriptive analytics with standard packages.
- how to deal with the complexity of real-world problems and how to perform sensitivity analysis in order to obtain useful managerial insights.
- how to analyze stochastic variability using random numbers & digital twins.

Prerequisites for participation

Necessary: –

Recommended: Successful completion of the course OPM 561 is recommended.

Module: OPM 561 (OPM 5610) Production Management & Variability

EN

Contents

To match supply/capacity with demand, managers and planners have to consider different types of variability. This course discusses sources for three dimensions of variability and analyzes the effects on several operational performance measures. It introduces planning tasks for the design and management of operations systems from the strategic to the operational level. After providing an overview of variability in operations management, the course addresses capacity planning and design problems for flow production systems. Afterwards, the course covers lean and total quality management and introduces different scheduling applications. Challenges and opportunities arising from the fourth industrial revolution (Industry 4.0) and key concepts for future factories are presented. To manage and reduce variability, we introduce modern business analytics tools as well as classical lean management approaches. Variability arising in the industry are discussed with case studies based on relevant applications.

This course aims to provide insights into the key decisions regarding the design and management of lean production systems. For this purpose, quantitative models for the performance analysis and optimization are discussed.

Learning outcomes

Students will

- develop skills for quantitative planning in the field of production management,
- have an overview of requirements, objectives and key concepts in lean production management, and
- understand reasons and effects of variability in operations management.

Prerequisites for participation

Necessary: –

Recommended: Basic knowledge in operations management (e.g. BSc course "Produktion" or "OPM 301 Operations Management") or equivalent.

Module: OPM 581 (OPM 5810) Service Operations Management: From Strategy to Execution

EN

Contents

Services are the largest segment of our economy in terms of GDP and employment. For example, in the EU, around 3 out of 4 jobs are in service industries. However, services pose particular challenges to managers due to their intangible and experiential nature, perishability and high levels of customer involvement. Smooth service delivery, timely responses to inquiries, and personalized interactions can directly impact customer satisfaction and unlock competitive advantage. Accordingly, operations have a strategic role in meeting customer needs when it comes to designing and managing customer-centric services. Delivering exceptional service experiences can help businesses to differentiate themselves from competitors but requires strategic alignment between operations and market-oriented decisions from an integrated viewpoint with a focus on the customer.

This course provides managerial concepts and analytical tools for effectively designing services and optimizing the underlying service delivery processes in face of these challenges. In particular, we will explore mission-critical service operations management decisions that impact value-to-the-customer, firm profitability and in some cases also environmental sustainability. These decisions include, for example, customer-oriented service design, process design and improvement, capacity management, revenue management, technology selection, servitization options, etc. Furthermore, we will explore how service operations differ from manufacturing operations and understand the potential and limitations of how traditional operations management techniques can be applied to services.

The course will draw upon fundamental management principles, cutting-edge analytics methodologies, state-of-the-art research and practice insights, as well as real-world case studies from leading companies. Applications cover a broad range of service industries, e.g., transport and communication, retailing, hospitality, banking and insurance, professional services, e-services, as well as service functions of the manufacturing sector.

Learning outcomes

Students will 1) get familiarized with the challenging decisions and problems in service operations management, and 2) learn concepts, analytical tools and managerial insights to deal with these issues in order to gain competitive advantage through service operations. The course should be useful for anyone with an intention of going into professional services such as consulting; into industry (service or manufacturing), where the importance of managing service processes is increasing every day; or with a desire to set up their own business.

Prerequisites for participation

Necessary: This course is an OPM5xx core course from the Operations Management area and has no prerequisites.

Recommended: Basic knowledge in Operations Management

Module: OPM 582 (OPM 5820) Case Studies in Operations Management

EN

Contents

In this course, participants will have the opportunity to complete an OM-related case study in a team, using an analytics-oriented approach for deriving recommendations. The main actor / decision maker in the case study may face an organization showing poor performance e.g. due to operational problems, or has to make strategic market-related decisions subject to challenging resource constraints. The managerial decisions ahead are often very complex, involving many alternatives with different impact, and trade-offs between key performance measures (e.g., profit, cost, quality, and environmental impact) must be made.

This course reviews managerial concepts and advanced analytical tools to help make more informed decisions and manage operations more effectively such that they are aligned with the overarching strategic objectives. In particular, teams will explore the theory by applying it to various cases studies of firms covering a broad range of industries, such as transport, retailing, hospitality, health care, professional services, manufacturing, etc. If the case allows, the approach to derive your recommendations can be analytics-based, using models and software such as state-of-the-art spreadsheet tools to analyze the firm's situation, identify root causes of the problem, and assess alternative courses of action.

The concepts, methods and tools used in the course have become invaluable aids to informed decision making in order to improve processes, save resources, and create value.

The overarching theme of the cases may have a special contemporary focus (e.g. Revenue Management, Artificial Intelligence, or Sustainable Operations) and will vary from year to year. Details will be announced in the syllabus (published in the OPM582 IL-IAS course in due time). Case topics will be allocated during the course based on student preferences. Students will work in teams of two on the assigned case.

Learning outcomes

Students will intensify their understanding of operations management by applying concepts and analytical tools in a broader, interdisciplinary and strategic context to practical case studies.

The course should be useful for anyone with an intention of going into consulting, industry (service or manufacturing), or with a desire to set up their own business.

Prerequisites for participation

Necessary: This course is an OPM5xx core course from the Operations Management area and has no prerequisites.

Recommended: Participants should be familiar with the fundamentals of operations management.

Module: OPM 584 (OPM 5840) Case Studies in Airline Operations Management

EN

Contents

In this course, participants will have the opportunity to complete an airline operations-related case study in a team. Students will be challenged to collaboratively design a new passenger airline in a niche market. The project integrates multiple facets of airline planning, including business strategy, logistics, operational considerations, and market analysis. Students are encouraged to apply theoretical knowledge, conduct research, and demonstrate creativity while maintaining realism in their assumptions and proposed solutions. The managerial decisions ahead are very complex, involving many alternatives with different impact, and trade-offs between key performance measures must be made.

Objectives are to

1. Design a business plan for the passenger airline catering to tourism traffic in a niche market.
2. Analyze factors such as base location, regulatory requirements, staffing, passenger flow, and aircraft selection.

3. Identify key threats and opportunities for the airline.

4. Propose realistic and data-driven solutions to address identified challenges.

Further details will be announced in the syllabus (published in the OPM 584 ILIAS course in due time). Students will work in teams on the assigned case.

Learning outcomes

Students will intensify their understanding of the airline industry and operations, applying managerial concepts and analytical tools in a broader, interdisciplinary and strategic context to practical case studies.

The course should be useful for anyone with an intention of going into consulting, industry, or with a desire to set up their own business.

Prerequisites for participation

Necessary: This course has no prerequisites.

Recommended: Basic knowledge in Business and Operations Management

Module: OPM 585 (OPM 5850) Airline Operations Management

EN

Contents

This course introduces selected aspects of the management of airline operations, focusing on both strategic and operational decision-making in a highly complex and regulated industry. Topics include fleet planning and selection, safety and risk management, sustainability initiatives, as well as economic and competitive considerations in global aviation. Each topic will be introduced through lectures that combine theoretical foundations with real-world industry practices. Students will then work in small teams on specific case questions, allowing them to apply concepts, analyze trade-offs, and develop solutions that reflect the realities of airline management. Group discussions and presentations will encourage critical reflection and peer learning. Further details will be announced in the syllabus (published in the OPM 585 ILIAS course in due time).

Learning outcomes

Students will intensify their understanding of the airline industry and operations, applying managerial concepts and analytical tools in a broader, interdisciplinary and strategic context to practical case studies. The course should be useful for anyone with an intention of going into consulting, industry, or with a desire to set up their own business.

Contents

Few corporate functions have changed as profoundly over the past two decades as procurement. Driven by globalization, digital transformation, geopolitical volatility, and rising sustainability expectations, purchased goods and services today account for roughly 40 to 60 percent of a typical firm's revenue, and the supply base is increasingly the primary source of innovation, resilience, and competitive differentiation. Procurement has therefore moved out of the back office and into the boardroom: chief procurement officers now report to the executive committee, and their decisions directly shape a firm's cost position, risk exposure, and ability to grow.

This module provides a rigorous, theory-grounded survey of modern procurement from a strategic perspective. Starting from the evolution of organizational buying and its measurable impact on firm performance, participants learn how to align procurement strategy with corporate and competitive strategy, how to structure make-or-buy decisions, and how to design the target operating model of a procurement function. A dedicated block introduces category management with tools such as the spend cube, Porter's five forces applied to supply markets, and the Kraljic purchasing portfolio. A final block addresses strategic supplier management, from buyer-supplier relationship governance to supplier evaluation, development, and integration. Lectures are complemented by case discussions, structured exercises, and guest lectures by senior procurement executives.

Learning outcomes

Modern procurement is an analytically demanding and strategically influential field. This module equips participants with the conceptual vocabulary, theoretical frameworks, and structured tools required to reason about strategic procurement problems at the level expected in competitive graduate recruiting (e.g., management consulting, supply chain leadership programs, entrepreneurship in procuretech). On successful completion, participants will be able to:

- Situate procurement strategically and align it with corporate strategy: derive procurement priorities from a firm's competitive strategy using the competitive priorities framework, and reason about make-or-buy decisions with transaction cost economics and the resource-based view.
- Design a target operating model: evaluate alternative organizational structures, governance mechanisms, core processes, performance measurement systems, and capability architectures for the procurement function.
- Develop category strategies: apply spend analysis, supply market analysis, and the Kraljic purchasing portfolio to segment a firm's spend and to derive differentiated category strategies with commercial, technical, and demand-side levers.
- Manage suppliers strategically: distinguish arm's length from relational exchanges, segment the supply base, and design buyer-supplier relationships that balance value creation, value sharing, and risk.
- Critically appraise contemporary challenges: reflect on how sustainability, geopolitical risk, digital transformation, and resilience reshape procurement decisions, and judge the limits of the frameworks taught.
- Communicate and defend procurement decisions in written form and in case-based class discussions.

Prerequisites for participation

Necessary: –

Recommended: Basic knowledge in supply chain and/or operations management

Contents

The ability to manage negotiations – where co-dependent parties try to arrive at decisions that satisfy their interests – and the broader micropolitical environment in which they occur is critical for success in business as in life. This module provides the theoretical background of micropolitics and the practical tools to affect joint decision-making processes (negotiations) and their outcomes. It discusses the application of these concepts and tools in different contexts: Agenda setting, mapping the political terrain, networking and coalition building, and bargaining. Different approaches of negotiation and the corresponding tactics will be analyzed. Guest speakers will enrich the module with practical insights from different contexts. Special emphasis will be put on the (inter-)cultural dimension and its impact on negotiations. The topics will be discussed along the typical timeline of a negotiation process: pre-negotiation phase, negotiation phase, post negotiation phase. Psychological tactics will be discussed as well as possible defenses against such tactics.

This course is a mandatory course for incoming students in the European Management track

Learning outcomes

Students understand the importance of developing micropolitical skills for effective leadership in the workplace. After successful completion, participants will:

- understand the theoretical concepts of micropolitics,
- know the negotiation process, key negotiation concepts, and are able to reflect on the different negotiation approaches,
- are able to apply practical tools during bargaining,
- understand and reflect on the impact of (inter-)cultural dimensions in negotiations,
- have reflected about their own personal style in negotiations and how they can advance it.
- have gained a deeper understanding, how psychological aspects influence the negotiation process and the possible outcome.

Contents

Supply chains comprise organizations, resources, and processes aimed at satisfying customer demand. Their effectiveness is paramount to the creation of business value. Carefully designed and well-run supply chains are an important source of competitive advantage. Particular complexities arise from the interplay between different members of a supply chain, including suppliers, manufacturers, and retailers. While they all pursue their own objectives they are also dependent on each other and must coordinate their activities to serve the customer. This course addresses the dynamics resulting from the interaction between supply chain members and introduces concepts for achieving supply chain alignment. It presents common forms of supply chain collaboration and discusses their potential and challenges. After establishing the fundamentals, the course proceeds to discuss how recent trends are impacting supply chain management, including sustainability, e-fulfillment, digitalization, and resilience. The course takes an analytics-oriented approach and introduces quantitative models as a means for analyzing strategic issues in supply chain management.

Learning outcomes

Students will understand the role of supply chain management and its impact on firm performance. They will be aware of strategic implications of supply chain design choices. They will recognize the potential of coordinated decision making along the supply chain and be aware of obstacles that complicate this coordination. The students will get to know mechanisms for aligning incentives of different supply chain members. They will be acquainted with relevant business analytics techniques to assess and optimize supply chain performance. Students will also be aware of relevant recent trends and of their impact on supply chain management.

Prerequisites for participation

Necessary: At least one of the modules OPM 501, 502, 561, 581, 582, or 591 (parallel attendance possible); other modules may be accepted upon request.

Recommended: Participants should be familiar with fundamentals of operations and supply chain management. Attendance of module OPM 501 is beneficial but not necessary. The course further assumes a basic knowledge in mathematics (including Linear Programming) and in statistics (probability distributions).

Module: OPM 661 (OPM 6610) Business Analytics: Robust Decisions

EN

no offering in fall 2026/2027

Contents

Business Analytics helps to optimize decisions for the design and management of operations systems and production processes. A major driver of the performance of operations systems is stochastic variability. For example, production systems often operate in an uncertain environment due to uncertain demand, unreliable machines, or random processing capacities.

In order to support robust decisions, we apply analytical solution approaches based on techniques from predictive and prescriptive analytics. The basic concepts of the analysis of Markovian queueing systems are explained in detail and performance evaluation approaches are implemented in Python. To create digital twins of operating systems, simulation techniques are introduced and implemented. This allows to analyze the sensitivity of system parameters on the main performance measures. Advanced topics such as queueing systems with general distributions, heterogeneities, and time-dependent input parameters are covered. Additionally, general managerial insights, for example economies of scale and the value of flexible capacities are discussed. Methods and performance measures of robust planning and optimization are introduced. Students become familiar with concepts and tools for predictive and prescriptive business analytics.

Moreover, we will implement those concepts using the programming language Python to perform sensitivity analyses and to develop managerial insights for stochastic operations systems.

During the course the students will work on several case studies and assignments (individual and in groups).

Learning outcomes

Students learn to understand the impact of stochastic variability in operations systems. After this course students are familiar with the theory and practice of the analysis of stochastic systems. They learn to implement, adapt and to apply methods and tools from business analytics e.g. analytical approximations, simulation, and robust planning methods to support managerial decisions.

Prerequisites for participation

Necessary: Basic knowledge in Python (OPM 560 or IS 557 or "Schlüsselqualifikation1: Programmierkurs Python" – Angebot der WIM) **and** knowledge in modelling in operations (OPM 561 or OPM 501).

In exceptional cases and by prior agreement, other modules may also be accepted as prerequisites.

Recommended: Participants should be familiar with the fundamentals of production and operations management. The course further assumes a basic knowledge in mathematics (including linear programming) and in statistics (probability distributions).

Module: OPM 662 (OPM 6620) Business Analytics: Capacity Optimization

EN

Contents

The course Business Analytics: Capacity Optimization focuses on data-driven decision support for the design and management of operational systems, with a particular emphasis on capacity planning and optimization. The course introduces core concepts and tools of prescriptive analytics grounded in Operations Research. Students learn how to formulate strategic, tactical and operational decision problems as linear programming (LP) and mixed-integer linear programming (MILP) models, with a strong focus on capacity allocation, utilization, and constraints in real-world systems. These optimization models are implemented, analyzed, and solved using standard prescriptive analytics tools. In addition, the course introduces heuristic and approximation methods to address the complexity of large-scale capacity and scheduling problems commonly encountered in practice. To account for uncertainty in operational environments, data-driven and stochastic modeling approaches are also covered. Throughout the course, students apply the methods to realistic case studies and assignments, both individually and in groups, gaining hands-on experience in modeling, solving, and interpreting capacity optimization problems that incorporate different types of variability.

Learning outcomes

Students are able to structure and analyze operational decision problems in the context of capacity optimization in operations systems. They can formulate these problems as linear and mixed-integer linear programming models and implement them using Pythonbased optimization tools (e.g., DCOplex or equivalent modeling environments) and standard solvers to derive optimal or near-optimal capacity allocation and scheduling decisions. Students are able to apply appropriate modeling strategies to handle real-world complexity in capacity-constrained systems, including aggregation, relaxation, decomposition, and heuristic approaches. They understand how to incorporate uncertainty and variability using data-driven and stochastic modeling techniques.

In addition, students are able to interpret optimization results, perform sensitivity analyses, and translate model results into actionable managerial insights for capacity planning, utilization, and operational decision-making.

Prerequisites for participation

Necessary: Basic knowledge in Python (OPM 560 or IS 557 or "Schlüsselqualifikation1: Programmierkurs Python" – Angebot der WIM) **and** knowledge in modelling in operations (OPM 561 or OPM 501).

In exceptional cases and by prior agreement, other modules may also be accepted as prerequisites.

Recommended: The course assumes a basic knowledge in mathematics (including linear programming).

Module: OPM 682 (OPM 6820) Revenue Management and Dynamic Pricing

EN

Contents

Revenue Management (RM) is concerned with demand-management decisions (such as product availability decisions, price optimization, assortment optimization and product line design) in face of resource constraints. Since resources to create and offer products are usually limited and often perishable, the effectiveness of market-related decisions is highly interrelated with resource allocation decisions.

Over the last decades, RM tools and systems have helped businesses in a variety of industries to ensure economic viability and to allocate scarce resources more effectively. Robert Crandall, former Chairman and CEO of American Airlines, has called RM "the single most important technical development in transportation management since we entered deregulation." While airlines have the longest history of development in classical RM, applications have rapidly diffused beyond airlines to industries such as retailing, hospitality, railways, car rental, telecommunications and financial services, electric utilities, consumer goods production and even MTO manufacturing.

For outside observers, RM may seem often like an art. But finally, the most important pillar of RM is analytics – including systematic data analysis, understanding value-to-the-customer and forecasting demand, and powerful optimization that allows taking the relevant market- and resource-related factors jointly into account.

With a focus on prescriptive analytics, this course discusses managerial concepts, optimization modelling approaches and state-of-the-art solution tools for RM. We pursue an active-learning approach including lecture-style class sessions, case discussions, exercises, guest lectures, and hands-on computer implementations using e.g. the Excel solver and easy-to-learn but powerful professional mathematical optimization tools.

The methods and tools taught in the course have become invaluable aids to informed decision making in order to save resources, create value-to-the-customer, and improve firm profitability.

Learning outcomes

Students will gain insights into practical applications of Revenue Management and Dynamic Pricing and get familiar with the underlying models and methods, thereby enhance their analytics skills.

Prerequisites for participation

Necessary: At least one of the modules OPM 501, 502, 560, 561, 581, 582, or 591 (parallel attendance possible); further modules may be accepted by Professor upon request.

Recommended: Participants should be familiar with Operations Management and enjoy analytics, such as mathematical modeling and optimization.

Contents

Procurement strategy sets the direction; sourcing design translates that direction into concrete decisions. This module examines how individual sourcing decisions can be designed, evaluated, and implemented with analytical rigor once the broader strategic posture is clear. The course develops the economic and quantitative foundations of sourcing by moving from demand definition and supply market analysis to decision models, mechanism choice, contracting, execution, and performance control. The module covers demand definition and cost logic, including need identification, specification management, total cost of ownership, value engineering, and cost modeling. It then examines supply market analysis and competitive structure, including macro- and industry-level assessment, supplier market structure, concentration and competition analysis, global sourcing, and RFx design. A central part of the module is decision support for sourcing allocation through constrained optimization with linear programming, multi-criteria evaluation with scoring methods and the Analytic Hierarchy Process, Pareto trade-offs, and decision-making under uncertainty. The course also addresses auctions and mechanism design, including auction theory, reverse auctions, mechanism-choice diagnostics, and information asymmetries. It further covers contracting and incentive design through contract types, price models, risk sharing, service-level agreements, incomplete contracts, and governance. Finally, the module turns to sourcing execution and performance control, including purchase-to-pay interfaces, expediting, supplier performance measurement, and the management of non-performance and conflict through formal and relational governance mechanisms. Cases and analytical exercises are used throughout to develop structured managerial judgment in sourcing contexts.

Learning outcomes

Sourcing decisions require formal analysis of costs, markets, mechanisms, contracts, and execution risks under uncertainty. This module equips participants with the analytical frameworks and decision tools required to design, evaluate, and implement sourcing decisions in complex organizational settings. On successful completion, participants will be able to:

- translate sourcing needs into analyzable decision inputs by developing total-cost-of-ownership and cost models and by assessing how specification choices shape downstream sourcing options;
- analyze supply markets in terms of competition, concentration, capacity constraints, switching costs, and information asymmetries, and derive implications for sourcing design;
- apply constrained optimization and multi-criteria decision methods, including linear programming, scoring models, the Analytic Hierarchy Process, and Pareto analysis, to evaluate supplier trade-offs and sourcing allocations;
- assess alternative sourcing mechanisms, including competitive bidding, negotiation, and reverse auctions, and select mechanisms that fit the competitive, informational, and transactional characteristics of the sourcing situation;
- structure contracts that allocate risk and align incentives by selecting appropriate price and governance models, designing service-level agreements, and recognizing the limits of incomplete contracts;
- translate sourcing decisions into execution and control systems by designing supplier performance metrics, identifying implementation risks, and selecting contractual, operational, and relational responses to non-performance and conflict.

Prerequisites for participation

Necessary: –

Recommended: The module builds on topics covered in OPM 591. Participants who have not attended this module might require additional preparation.

Module: OPM 701 (OPM 7010) Research Seminar Supply Chain Management

EN

Contents

The goal of this seminar is to introduce the participants to the conducting of scientific research. It thereby prepares them for the writing of their Master thesis. Participants will carry out a literature study on a given topic in the field of logistics and supply chain management and discuss the results in a written report and in an oral presentation.

Learning outcomes

Students will learn how to analyze the academic literature on a given topic. They will become acquainted with the setup and composition of academic publications. They will also learn how to present the results of their analysis.

Prerequisites for participation

Necessary: At least one module OPM 6XX (parallel attendance possible) or an equivalent module within an exchange program

Recommended: Sound knowledge in logistics and supply chain management; sound quantitative skills; interest in scientific research

Module: OPM 760 (OPM 7600) Project Seminar Operations Analytics

EN

Contents

The goal of this seminar is to introduce the participants to conducting of scientific research in the field of operations management. Thereby, it prepares the students for writing an analytics-oriented Master's thesis. Based on scientific literature, participants will apply and implement predictive or descriptive business analytics approaches to solve an operations management problem. A sensitivity analysis demonstrates the reliability of the approach and generate managerial insights. Depending on the assigned topic, students will work individually or in small teams. Students present their findings through a written report and an oral presentation.

Learning outcomes

Students will learn to analyze and implement a predictive or prescriptive business analytics approach based on scientific literature. They learn to design a numerical study to draw conclusions on how this approach supports decisions for a problem in Operations Management. Additionally, they will learn how to present the results of their analyses.

Prerequisites for participation

Necessary: At least one of the modules OPM 661 or OPM 662 (parallel attendance possible) or an equivalent module within an exchange program.

Recommended: Sound knowledge of programming in Python and familiarity in predictive or prescriptive operations analytics. Sound knowledge in production management, quantitative skills, as well as interest in scientific research is required.

Module: OPM 761 (OPM 7610) Research Seminar Production Management

EN

Contents

The goal of this seminar is to introduce the participants to conducting of scientific research in the field of production management. Thereby, it prepares the students for writing their Master's theses. Participants will independently (i) apply a business analytics approach to a specific operations problem, (ii) carry out a literature study on a given topic, or (iii) discuss and critically assess a scientific paper in detail. The students present their findings through a written report and an oral presentation.

Learning outcomes

Students will learn to analyze the academic literature on a given topic in production management. They will become acquainted with the setup and composition of scientific research. Additionally, they will learn how to present the results of their analyses.

Prerequisites for participation

Necessary: At least one of the modules OPM 6XX (parallel attendance possible) or an equivalent module within an exchange program.

Recommended: As the topics are based on the modules OPM 661 or OPM 662, additional preparation is required if students did not attend those modules. Sound knowledge in production management, sound quantitative skills, as well as interest in scientific research is required.

Modul: OPM 781 (OPM 7810) Research Seminar Service Operations Management

DE EN

Contents

The seminar introduces participants to conducting applied scientific research in the field of (service) operations management in order to prepare them for writing their master thesis. Participants will carry out a literature research on a given topic in service operations management and analyze a related decision problem. Students will report their results in a paper and present their main findings in class. Also, the seminar aims at practicing presentation skills, such as speaking with clarity, confidence and connection.

Learning outcomes

Students will learn how to analyze the academic literature on a given topic and thereby get prepared to independently analyze and solve a decision problem in a scientific manner within the management science field. Students will also learn how to present the results of their analysis.

Prerequisites for participation

Necessary: Wenigstens ein Modul OPM 6XX (parallele Belegung nach Absprache möglich) oder ein äquivalentes Modul im Rahmen eines Austauschprogramms.

In Ausnahmefällen und nach Absprache können auch andere Module als Voraussetzung akzeptiert werden.

Recommended: Fundiertes Wissen in Operations und Service Operations Management; gute quantitative Fähigkeiten; Interesse an wissenschaftlicher Arbeit

Module: OPM 791 (OPM 7910) Research Seminar Procurement

EN

Contents

This seminar examines current procurement and supply chain management topics from a research perspective. By writing an independent research paper on a specific topic, students deepen their understanding of procurement research and its implications for practice. The suggested topics emphasize research rather than application, take an empirical perspective, and are related to the current research interests of the Endowed Chair of Procurement. Topics increasingly favor data-driven and innovative research designs that go beyond traditional literature reviews, reflecting the evolving capabilities of AI tools and the corresponding need for researchers to focus on genuinely novel questions, creative methodologies, and authentic empirical contributions that cannot be readily replicated by automated means.

Participants learn how to structure a research question systematically, review and synthesize relevant academic literature, develop an appropriate empirical research design, and present research findings to an academic audience. The seminar follows the typical phases of a research project: problem formulation, literature review, methodology selection, data collection and analysis, and presentation. A joint kick-off session introduces the foundations of research and scientific writing in the context of procurement and supply chain management. Participants then work independently on their assigned topics under individual supervision. The seminar concludes with a block presentation session in which each participant presents their findings and serves as a discussant for another paper.

Learning outcomes

The main objective of this seminar is to develop the competences required for writing a high-quality empirical master thesis in the broader procurement arena. On successful completion, participants will be able to:

- Formulate a research question in the field of procurement and supply chain management and position it within the existing academic literature.
- Conduct a systematic literature review, identifying relevant theories, empirical findings, and research gaps.
- Select and justify an appropriate empirical research design for a given research question, prioritizing data-driven and innovative methodological approaches over purely descriptive or review-based work.
- Synthesize findings from the literature and from own analysis into a coherent written research report that meets academic standards.
- Present research findings to an academic audience and defend methodological and substantive choices in discussion.
- Critically evaluate the research of peers by serving as a discussant and providing constructive feedback.

Prerequisites for participation

Necessary: Attendance of at least one module OPM 6xx (parallel attendance is possible) or an equivalent module within an exchange program

Recommended: OPM 591 and OPM 692 or equivalent modules within exchange programs

Forms of teaching and learning	Contact hours	Independent study time

Restricted admission	yes	

Further information	Admission is capacity-constrained. The seminar is part of a coordinated offering by the four chairs of the Area Operations Management. Students apply centrally via an ILIAS survey during a two-week application window in the preceding semester, indicating topic preferences across all participating chairs. Applicants for OPM 791 must additionally submit a CV, B.Sc. grades overview, and current M.Sc. grades overview by email to the office of the Endowed Chair of Procurement (procurement@uni-mannheim.de). Admission is binding and confirmed before the exam season of the preceding semester. Details on topics, deadlines, and contact persons are published at the beginning of each application cycle.

4 STUDIENOPTION BUSINESS RESEARCH

Study Option Business Research

Students enrolled in the **Mannheim Master in Management** may apply for the **Business Research Study Option**. This selective option is designed for outstanding and research-oriented students who wish to gain early exposure to academic research at doctoral level and prepare for possible doctoral studies or a research-oriented career.

The study option connects the regular master's program with selected courses from the structured doctoral training program at the **Center for Doctoral Studies in Business (CDSB)** at the **Graduate School of Economic and Social Sciences (GESS)**. These CDSB courses count toward the master's degree in accordance with the relevant study regulations and do not require students to complete additional ECTS credits beyond the regular master's program. If students are later successfully admitted to a doctoral program, these courses may be recognized in accordance with the applicable regulations, thereby potentially shortening the doctoral study phase.

Admission is selective and takes place during the second semester. Details on admission requirements, selection, tracks, and application deadlines are governed by the relevant study regulations. Further information is available on the **Business Research Excellence** webpage:

<https://www.bwl.uni-mannheim.de/studium/exzellenzfoerderung/business-research-excellence/>

5 WAHLFACH

Wahlfach:

Es kann ein Wahlfach ausgewählt werden, in dem bis zu 24 ECTS-Punkte abgelegt werden können – je nach den Bestimmungen des gewählten Wahlfachs. Dadurch reduziert sich die Anzahl an zu erreichenden ECTS-Punkte im Bereich „Betriebswirtschaftslehre“ entsprechend. Wenn kein Wahlfach gewählt wird, sind entsprechend mehr Module im Bereich „Betriebswirtschaftslehre“ zu belegen.

Bitte beachten Sie, dass Sie die in diesem Kapitel aufgeführten Module nur als Wahlfach im MMM belegen können, sofern sie nicht Teil Ihres bereits absolvierten Bachelor-Studiums waren. Sollten Sie eine der in diesem Kapitel aufgeführten Veranstaltungen bereits im Rahmen dieses abgeschlossenen Studiums belegt haben, können Sie dieses Wahlfach nicht belegen. Bitte informieren Sie sich auf den Seiten der jeweiligen Fakultäten über mögliche Anmeldefristen.

Modul: Praktische Informatik

5.3 Geschichte

Das Wahlfach Geschichte hat einen Umfang von 16 bis 19 ECTS.

Die Themen und Titel der Veranstaltungen sind semesterabhängig und können dem Vorlesungsverzeichnis der Philosophischen Fakultät / Historisches Institut (Portal²) entnommen werden. Die Veranstaltungen finden normalerweise auf Deutsch statt. Die Anmeldung erfolgt entweder über das Portal² (Vorlesungsverzeichnis der Philosophischen Fakultät) oder direkt per E-Mail an Sebastian Hempen: master(at)phil.uni-mannheim.de.

5.3.1 Geschichte für Studierende ohne geisteswissenschaftliche Vorkenntnisse

Modul: Geschichte für Studierende ohne geisteswissenschaftliche Vorkenntnisse

DE

Sprache	Deutsch
Notwendige Voraussetzungen	–
Informationen zur Anmeldung	Die Anmeldung erfolgt entweder über das Portal ² (Vorlesungsverzeichnis der Philosophischen Fakultät) oder direkt per E-Mail an Aline Schmidt (master.phil@uni-mannheim.de).
Organisatorische Informationen	Es müssen ein beliebiges Proseminar (8 ECTS) des Historischen Instituts und entweder eine Vorlesung und eine Übung (je 4 ECTS) aus den geschichtswissenschaftlichen Bachelor-Studiengängen oder Vorlesungen des Moduls „Disziplinäre Erweiterung“ des Master-Studiengangs Geschichte belegt werden. Näheres finden Sie in den Modulkatalogen (Modulkatalog B.A. Geschichte / Modulkatalog M.A. Geschichte) sowie im Vorlesungsverzeichnis des historischen Instituts (Portal 2). Voraussetzung für den Besuch aller weiteren Veranstaltungen im Rahmen dieses Moduls ist der erfolgreiche Besuch eines Proseminars Geschichte (Proseminar Altertum, Proseminar Mittelalter, Proseminar Frühe Neuzeit, Proseminar Neuzeit, Proseminar Wirtschafts- und Sozialgeschichte). Darüber hinaus gibt es verschiedene Kombinations- bzw. Wahlmöglichkeiten, um die geforderten 16 bzw. 19 ECTS zu erreichen. Dabei ist es aber nicht möglich, die nötigen ECTS-Punkte durch den Besuch von zwei Übungen zu sammeln.
Kontaktperson	Aline Schmidt (master(at)phil.uni-mannheim.de)

	Notwendige Voraussetzungen	Form und Art der Prüfung	ECTS-Leistungspunkte	Semester
Proseminar „Altertum“, „Mittelalter“, „Neuzeit“ oder „Wirtschafts- und Sozialgeschichte“		Hausarbeit	8	FSS & HWS

5.4 Mathematik

Das Wahlfach Mathematik hat einen Umfang von 16 bis 24 ECTS.

Die Kursanmeldung erfolgt über das Portal².

5.4.1 Mathematik für Studierende ohne mathematische Vorkenntnisse

Modul: Mathematik für Studierende ohne mathematische Vorkenntnisse

DE

Sprache	Deutsch
Notwendige Voraussetzungen	–
Informationen zur Anmeldung	–
Organisatorische Informationen	Das Wahlfach Mathematik für Studierende ohne Vorkenntnisse besteht aus zwei beliebigen der vier folgenden Module (insgesamt 18 bis 20 ECTS).
Kontaktperson	Sanja Juric: juric@uni-mannheim.de

	Form und Art der Prüfung	ECTS-Leistungspunkte	Semester
Analysis I	Schriftliche Klausur (90 Min.) oder mündliche Prüfung (30 Min.); Prüfungsvorleistung: i.d.R. erfolgreiche Teilnahme an den Übungen	10	HWS
Analysis II	Schriftliche Klausur (90 Min.) oder mündliche Prüfung (30 Min.); Prüfungsvorleistung: i.d.R. erfolgreiche Teilnahme an den Übungen	10	FSS
Lineare Algebra I	Schriftliche Klausur (90 Min.) oder mündliche Prüfung (30 Min.); Prüfungsvorleistung: i.d.R. erfolgreiche Teilnahme an den Übungen	9	HWS
Lineare Algebra II	Schriftliche Klausur (60 Min.) oder mündliche Prüfung (30 Min.); Prüfungsvorleistung: i.d.R. erfolgreiche Teilnahme an den Übungen	9	FSS

5.4.2 Mathematik für Studierende mit mathematischen Vorkenntnissen

Das Wahlfach Mathematik für Studierende mit Vorkenntnissen ist flexibel in einem Umfang von 16 bis 24 ECTS belegbar, es stehen hierfür alle angebotenen Veranstaltungen des Bachelor of Science Wirtschaftsmathematik und des Master of Science Wirtschaftsmathematik der Universität Mannheim zur Verfügung. Ausgeschlossen sind Veranstaltungen, die bereits im Rahmen des Bachelorstudiums abgelegt wurden sowie die Seminare der Wirtschaftsmathematik. Absolventen eines mathematischen Studiengangs können Vorlesungen aus dem Bachelorstudiengang Wirtschaftsmathematik nur mit Zustimmung des Prüfungsausschusses belegen.

Nähere Informationen zu den einzelnen Kursen wie auch zu den jeweiligen Voraussetzungen finden Sie in den entsprechenden Modulkatalogen des B.Sc. bzw. M.Sc. Wirtschaftsmathematik:

[B. Sc. Wirtschaftsmathematik | Universität Mannheim \(uni-mannheim.de\)](https://www.uni-mannheim.de/studienberatung/wirtschaftsmathematik/bachelor)

[M. Sc. Wirtschaftsmathematik | Universität Mannheim \(uni-mannheim.de\)](https://www.uni-mannheim.de/studienberatung/wirtschaftsmathematik/master)

Es wird grundsätzlich empfohlen, sich zur Kurswahlentscheidung mit der Fachstudienberatung für Wirtschaftsmathematik (studienberatung@wim.uni-mannheim.de) oder dem Studiengangsmangement der Fakultät für Wirtschaftsinformatik (wessa@wim.uni-mannheim.de) / (juric@wim.uni-mannheim.de) und Wirtschaftsmathematik (juric@uni-mannheim.de) in Verbindung zu setzen.

5.5 Philosophie

Das Wahlfach Philosophie hat einen Umfang von 16 ECTS.

Zu wählen ist eines der beiden Module „Ethik, Gesellschaft, Wirtschaft“ oder „Sprache, Wissen, Wirklichkeit“.

Modul: Modul: Ethik, Gesellschaft Wirtschaft

DE

Sprache	Deutsch

6 MASTER-ARBEIT

Contents

Die Studierenden arbeiten während der Bearbeitungszeit selbstständig an einem ausgewählten betriebswirtschaftlichen Thema. Die Studierenden entwickeln dem Thema angemessene Forschungsfrage(n) und geben einen Literaturüberblick. Die Studierenden wenden die ihrem Thema entsprechenden wissenschaftlichen Methoden zur Lösungsfindung der Problemstellung an und entwickeln Lösungsansätze für Ihre Forschungsfrage(n).

Learning outcomes

Die Studierenden sind nach Abschluss der Masterarbeit in der Lage, selbstständig wissenschaftliche Probleme zu identifizieren und mit Hilfe wissenschaftlicher Methoden Lösungsansätze zu entwickeln. Die Studierenden können qualitativ hochwertige Informationen finden, selektieren und analysieren.

Sie sind in der Lage, die Informationen im Rahmen Ihres gewählten Themas zu interpretieren und anzuwenden. Die Studierenden können eine wissenschaftliche Arbeit strukturieren und verfassen und haben ein tiefgehendes Wissen in ihrem spezialisierten Gebiet erlangt.

Prerequisites for participation

Necessary: Mindestens ein Seminar (700er Modul); die Voraussetzungen der einzelnen Lehrstühle finden Sie in Abschnitt 6.1 – 6.6 des [PDF-Modulkatalogs](#)

Recommended: –

Program-specific Competency Goals	CG 1, CG 4

6.1 Area Accounting and Taxation

Voraussetzungen für das Anfertigen der Master-Arbeit an den folgenden Lehrstühlen:

Prof. Dr. Jannis Bischof (LS für ABWL und Unternehmensrechnung), **Prof. Dr. Holger Daske** (LS für ABWL, Unternehmensrechnung und empirische Kapitalmarktforschung), **Prof. Dr. Dirk Simons** (LS

für ABWL und Rechnungswesen), **Prof. Dr. Jens Wüstemann** (LS für ABWL und Wirtschaftsprüfung), **Prof. Dr. Davud Rostam-Afschar** (Professur für Accounting), **Jun.-Prof. Felix Vetter, PhD** (Juniorprofessur für Accounting & Taxation), **Jun.-Prof. Dr. Reeyarn Zhiyang Li** (Juniorprofessur für Rechnungswesen):

- ACC 750. Anerkennung von anderen Seminaren im Einzelfall nur nach Rücksprache.

Prof. Dr. Stefan Reichelstein (LS für ABWL), **Jun.-Prof. Dr. Gunther Glenk** (Juniorprofessur für Accounting), **Jun.-Prof. Dr. Nikolas Wölfling** (Juniorprofessur für Accounting):

- ACC 715 oder MAN 771. Seminarscheine anderer Lehrstühle können in Ausnahmefällen ebenfalls akzeptiert werden.

Voraussetzungen für das Anfertigen der Master-Arbeit an den folgenden Lehrstühlen:

Prof. Dr. Philipp Dörrenberg (LS für ABWL und Betriebswirtschaftliche Steuerlehre), **Prof. Dr. Christoph Spengel / Prof. Dr. Katharina Nicolay** (LS für ABWL und Betriebswirtschaftliche Steuerlehre II / Juniorprofessur für Betriebswirtschaftliche Steuerlehre, insb. Unternehmensbesteuerung), **Prof. Dr. Johannes Voget** (LS für ABWL, Taxation and Finance):

- TAX 730 (Anerkennung von Seminaren anderer Lehrstühle nach Rücksprache)

6.2 Area Finance

Voraussetzungen für das Anfertigen der Master-Arbeit and den Lehrstühlen der Area Finance:

Prof. Ernst Maug, Ph.D. (LS für Corporate Finance), **Prof. Dr. Alexandra Niessen-Ruenzi** (LS für ABWL und Corporate Governance), **Prof. Dr. Stefan Ruenzi** (LS für Internationale Finanzierung), **Prof. Dr. Oliver Spalt** (LS für ABWL, Finanzwirtschaft und Finanzmarktinstitutionen), **Prof. Dr. Erik Theissen** (LS für ABWL und Finanzierung), **Prof. Dr. Dr. h.c. Martin Weber** (Seniorprofessur für ABWL und Finanzwirtschaft, insb. Bankbetriebslehre):

- FIN 5XX und ein Seminar der Finance Area.
- In Ausnahmefällen können auch andere Seminare anerkannt werden.

6.3 Area Information Systems

Voraussetzungen für das Anfertigen der Master-Arbeit an den Lehrstühlen der Area Information Systems:

Prof. Dr. Armin Heinzl (LS für ABWL und Wirtschaftsinformatik I), **Prof. Dr. Hartmut Höhle** (LS für Enterprise Systems), **Prof. Dr. Markus Strohmaier** (LS für Data Science in the Economic and Social Sciences), **Prof. Dr. Jens Förderer** (LS für Information Systems II):

- IS 7XX.
- Die Area Information Systems empfiehlt, die Seminararbeit an dem Lehrstuhl zu schreiben, an dem die Master-Arbeit geschrieben werden soll, weil so eine frühzeitige Einbindung in Forschungs- und Projektarbeiten ermöglicht wird. Dennoch werden die Module IS 703, IS 712, IS 723 und IS 742, gegenseitig anerkannt.
- In Ausnahmefällen ist die Anerkennung eines Seminars aus einer anderen Area möglich. Der Bezug zu Information Systems ist dabei durch einen Lehrstuhlinhaber der Area Information Systems zu prüfen und zu bestätigen.

6.4 Area Management

Voraussetzungen für das Anfertigen einer Masterarbeit an den folgenden Lehrstühlen:

- **Prof. Dr. Torsten Biemann** (LS für ABWL, Personalmanagement und Führung): MAN 741/742 **und entweder** MAN 640 **oder** MAN 641 **oder** MAN 642 **oder** MAN 644 **oder** MAN 645 **oder** MAN 646 **oder** MAN 647 **oder** MAN 648 **oder** MAN 649.
- **Prof. Dr. Matthias Brauer** (LS für Strategisches und Internationales Management): MAN 750 **und entweder** MAN 654 **oder** MAN 655 **oder** MAN 656 **oder** MAN 657.
- **Prof. Dr. Bernd Helmig** (LS für ABWL, Public & Nonprofit Management): MAN 710/711/712 **und entweder** MAN 617 **oder** MAN 619 **oder** MAN 637 **oder** MAN 659 **oder** MAN 674 **oder** MAN 675 **oder** MAN 676 **oder** MAN 679 **oder** MAN 680.
- **Prof. Dr. Karin Hoisl** (LS für Organisation und Innovation): MAN 721 **und entweder** MAN 690 **oder** MAN 691 **oder** MAN 692 **oder** MAN 693 **oder** MAN 658.
- **Prof. Dr. Michael Woywode** (LS für Mittelstandsforschung und Entrepreneurship): MAN 770 **und entweder** MAN 630 **oder** MAN 631 **oder** MAN 632 **oder** MAN 633 **oder** MAN 634.
- **Prof. Dr. Max Reinwald** (Juniorprofessur für Management): MAN 741/742 **und entweder** MAN 640 **oder** MAN 641 **oder** MAN 642 **oder** MAN 644 **oder** MAN 645 **oder** MAN 646 **oder** MAN 647 **oder** MAN 648 **oder** MAN 649.

Seminare anderer Lehrstühle können in begründeten Ausnahmefällen ebenfalls akzeptiert werden.

6.5 Area Marketing and Sales

Voraussetzungen für das Anfertigen der Master-Arbeit an den Lehrstühlen der Area Marketing and Sales:

Prof. Dr. Dr. h.c. mult. Christian Homburg (LS für Business-to-Business Marketing, Sales & Pricing), **Prof. Dr. Florian Kraus** (Dr. Werner Jackstädt-Stiftungslehrstuhl für Sales & Services Marketing), **Prof. Dr. Sabine Kuester** (LS für Marketing & Innovation), **Prof. Dr. Florian Stahl** (LS für quantitatives Marketing):

- MKT 7X0.
- Die Area Marketing empfiehlt, die Seminararbeit an dem Lehrstuhl zu schreiben, an dem die Master-Arbeit geschrieben werden soll, weil so eine frühzeitige Einbindung in die jeweiligen Forschungs- und Projektarbeiten des Lehrstuhls ermöglicht wird. Dennoch werden die Module MKT 710, 720, 730, und 740 von den Marketing-Lehrstühlen gegenseitig anerkannt.
- In Ausnahmefällen können auch andere Seminare anerkannt werden.

6.6 Area Operations Management

Voraussetzungen für das Anfertigen der Master-Arbeit an den Lehrstühlen der Area Operations Management:

Prof. Dr. Christoph Bode (Stiftungslehrstuhl für Procurement), **Prof. Dr. Moritz Fleischmann** (LS für ABWL und Logistik), **Prof. Dr. Cornelia Schön** (LS für ABWL und Service Operations), **Prof. Dr. Raik Stolletz** (LS für ABWL und Produktion):

- **Entweder:** Mindestens ein Modul OPM 6XX **und entweder** OPM 701 **oder** OPM 760 **oder** OPM 761 **oder** OPM 781 **oder** OPM 791.
- **Oder:** ein äquivalentes Modul während eines Auslandssemesters **und entweder** OPM 701 **oder** OPM 760 **oder** OPM 761 **oder** OPM 781 **oder** OPM 791.
- Die Area Operations Management empfiehlt das Seminar und die Masterarbeit am selben Lehrstuhl zu schreiben. Dennoch erkennen die Lehrstühle der Area OPM Seminare anderer Lehrstühle innerhalb der Area gegenseitig an.
- In Ausnahmefällen können auch andere Seminare anerkannt werden.

Prof. Dr. Martin Glanzer (Juniorprofessur für Operations Management):

- OPM 701 **oder** OPM 760 **oder** OPM 761 **oder** OPM 781 **oder** OPM 791.
- In Ausnahmefällen können auch andere Seminare anerkannt werden.

6.7 Wahlfach

Die Master-Arbeit kann, wenn das Thema der Master-Arbeit einen betriebswirtschaftlichen Bezug aufweist, auch in einem Wahlfach geschrieben werden.
